

### TECHNICAL DATA

**Operating range:**

from 1 to 12 m<sup>3</sup>/h with head up to 110 metres.

**Pumped liquid:** clean, free of solids and abrasives, non-viscous, non-crystallised and chemically neutral, with properties similar to water.

**Liquid temperature range:**

from 0 °C to +35 °C for domestic use

(EN 60335-2-41 safety standards).

from 0 °C to +40 °C for other uses.

**Maximum ambient temperature:** +40 °C.

**Maximum operating pressure:** 12 bar (1200 kPa).

**Installation:** fixed, vertical position.

### APPLICATIONS

Vertical multistage centrifugal pump suitable for medium to large user water systems. Recommended for pressurisation units, boiler supply, hot water and cooling water circulation, fire fighting and washing systems, drinking water supply and filling of pressure vessels, sprinkler and watering systems and water purification systems.

### ADVANTAGES OF USE

Operating pressure stability – **Excellent energy saving** (up to 60 % ) – Reduced hammering effects – Reduced space requirements – Less maintenance – Reduced pump wear – Less power factor correction required – Less water consumption – Integrated protections.

### CONSTRUCTION FEATURES OF THE PUMP

Technopolymer delivery and suction bodies with IN-LINE suction and delivery ports with threaded metal insert.

Impellers, diffuser bodies and diffusers in technopolymer, fully rust-proof.

AISI 304 stainless steel pump liner, adjustment rings and seal disc. Carbon/ceramic mechanical seal, fitted on the AISI 303 stainless-steel drive shaft extension.

### CONSTRUCTION FEATURES OF THE MOTOR

Shaft with rotor running on permanently lubricated ball bearings, oversized to ensure low noise and durability.

Construction according to CEI 2-3.

Controlled by MCE inverter.

**Protection class:** IP 55

**Insulation class:** F.

**Standard single-phase voltage:** 1x230 V / 50-60 Hz

**Special version on request:** three-phase 3x400 V / 50 Hz, or three-phase 3x460 V / 60 Hz

**Standard three-phase voltage:** 3x400 V / 50 Hz

**Special version on request:** 3x460 V / 60 Hz

## MCE/P INVERTER

### CONSTRUCTION FEATURES OF THE ELECTRONICS: MCE/P INVERTER

The inverter continuously adjusts the rotation speed of the electric pump, keeping the pressure constant, even when the flow rate varies.

The other electric pumps, also with variable speed, are activated in cascade after the first one has reached maximum speed. Through modulation, they compensate the pressure fluctuations of the system.

For every operating cycle, it is possible to switch the restart to a different pump, therefore ensuring even use of all electric pumps.

It is possible to set operation times for each individual pump, switching to another pump after such set times.

The "SP" pressure can be adjusted by the user using the "+" and "-" keys found on the MCE/P (as a rule, all the pumps are set to the same pressure value). With the new MCE/P, it is sufficient to set the data on one of the devices, and it will be automatically propagated to the other pumps of the system.

## MODES OF OPERATION

The inverter is capable of maintaining a constant pressure even when the flow rate varies.

The operating pressure can be adjusted by the user.

A good pressure set-point is between 1/3 and 2/3 of the maximum head of the electric pump. In this way, high efficiency of the pump is maintained, together with maximum saving.

In addition, the MCE/P does not block the pump if the pressure is not reached, but the flow is present. This prevents service interruptions in case of high flows.

**For more information refer to the technical appendix.**
