MMS rewindable motors

The Grundfos MMS product range is a complete range of submersible, rewindable motors, available in sizes from 3.7 kW 6" up to 250 kW 12" motors.

Three material versions are available. A cast iron version EN-JL1040. For more aggressive liquids with a moderate content of salt, an N-version made of stainless steel DIN/EN 1.4401 (AISI 316) is available. For aggressive liquids with more salt content than sea water and temperatures above 15 deg celsius, it is recommended to use the R version AISI 904L.

Grundfos MMS submersible motors are designed according to market standards. All Grundfos MMS motors are designed to fit pump ends manufactured according to NEMA standards. The motors are ideally suited for water supply pumps for irrigation, groundwater regulation, pressure boosting, industrial water transfer and similar applications. The 10" and 12" motors are designed according to the drawings shown on page 8. MMS motors comply with the same standards as Grundfos MS motors and can therefore be fitted on all Grundfos SP pumps without the need for adapters.

The motor production is in the hands of experts with many years of experience within the manufacture of motors. In order to make the time of delivery as short as possible, components are manufactured for stock, enabling rapid assembly of a few basic components into the finished motor.

The rewindable motor construction means low costs of repair of the motor in case of damage. Moreover, as rewinding can be effected locally, unnecessary time for transportation of the motor can be avoided and possible periods of downtime reduced to a minimum. The construction of the motor, based on few basic components, also facilitates service and repair of the motor.

Fitted with a sturdy MICHELL thrust bearing, which also functions as an upthrust bearing, all motors offer reliable operation.

In order to achieve maximum protection of the motor against burnout, all motors can be fitted with a Pt100 sensor. Combined with a relay and an optional Grundfos MP 402, the Pt100 provides optimum protection of the motor.

Rewindable motors

The two pole MMS motors are easily rewinded. The windings of the stator are made of a special water-proof wire of pure electrolytic copper sheathed with special non-hydroscopic thermoplastic material. The high dielectric strength properties of this material allow direct contact between the windings and the liquid for efficient cooling of the windings.

Type key

Example	MMS	6	000	N
Type range

Generation				
Material:				
= Cast iron EN-JL1040				
N = DIN/EN 1.4401 (AISI 316)				
R = DIN W.-Nr. 1.4539				

High motor efficiency

The complete motor range offered by Grundfos is characterized by high efficiency, which contributes to improved economy of the total pump system.

Overtemperature protection

For protection against overtemperature, Grundfos offers the Pt100 temperature sensor as an optional extra.

The Pt100 is fitted in the motor and connected via a relay, which can be connected to the MP204 motor protection.

When the temperature becomes too high, the motor will be cut out and damage to the pump be avoided.

Protection against upthrust

In case of a very low counter pressure in connection with start-up, there is a risk that the entire pump body may rise, for instance in connection with fountain applications. This is called upthrust, and it may cause damage to both pump and motor. Therefore, the MMS motors are fitted with upthrust spacers, which prevent upthrust in the critical start-up phase.

The maximum load in connection with thrust and upthrust can be seen in the table below.

Motor type	Motor power [kW] (hp)		Thrust		Upthrust
	Min.	Max.	(*) [N]	(**) [N]	
6"	3.7 (5)	15 (20)	15000		6000
	18.5 (25)	37 (50)	27500		6000
8"	22 (30)	110 (150)	60000		12500
10"	75 (100)	190 (260)	60000		12500
12"	132 (180)	250 (340)		70000	15000

Voltage quality

The required voltage quality for Grundfos MMS submersible motors, measured at the motor terminals, is –10%/+6% of the nominal voltage during continuous operation (including variations in the supply voltage and losses in cables).

Fig. 3 MMS motor

TM01 7408 1204

TM01 8447 0200

Operating conditions

Cooling

The cooling of the motor depends on the temperature and the flow velocity of the pumped liquid past the motor.

To ensure sufficient cooling, the values for maximum temperature of the pumped liquid and its flow velocity must be kept.

It is recommended always to ensure a minimum cooling flow of 0.15 m/s.

Free convection

Free convection is achieved when the diameter of the borehole is at least 2" (~ 50 mm) bigger than the outer diameter of the motor.

The motor must always be installed above the borehole screen. If a flow sleeve is used, the motor can be placed in the screen.

Calculation of the flow velocity:

$$v = \frac{Q_{min}}{2826 \times (D_i^2 - d_A^2)} \text{ m/s}$$

Required data:

Q_{min} : Flow in m³/h

D_i : Borehole diameter in m

d_A : Motor diameter in m.

Fig. 4 Diameter of motor and borehole

Maximum liquid temperature:

Motor	Flow velocity past motor	Installation			
		PVC windings		PE/PA windings	
		Vertical	Horizontal	Vertical	Horizontal
Grundfos 6" to 12" rewindable	0.15 m/s	40 °C	30 °C	20 °C	15 °C
	0.50 m/s	45 °C	35 °C	25 °C	20 °C

Note: For MMS 6000, 37 kW, MMS 8000, 110 kW, and MMS 10000, 170 kW, the maximum liquid temperature is 5 °C lower than the values stated in the table above. For MMS 10000, 190 kW the temperature is 10 °C lower.

Operating pressure

For all motor sizes: Maximum 60 bar.

Temperature of pumped liquid

Motors with PVC windings can operate at liquid temperatures up to 30 °C.

When operating in liquids at temperatures from 20 °C to 43 °C, the motor can be derated according to the curve below.

Fig. 5 PVC windings

Motors with PE/PA windings can operate at temperatures up to 50 °C.

For liquid temperatures from 35 °C to 50 °C, the motors with PE/PA windings can be derated according to the curve below.

Fig. 6 PE/PA windings

Windings temperature

PVC windings: 70 °C

PE/PA windings 90 °C

* Only MMS 8000 are available in R-versions

Fig. 7 MMS 10000

TM01 4985 0404

Pump connection

MMS 6000 and MMS 8000 have connections according to NEMA standard MG 1-18.413.

MMS 10000 and MMS 12000 connections are according to the drawings to the right.

The cable outlet of motors for star-delta starting are displaced by 90°.

Shaft and radial bearing

The stainless steel splined shaft end of the 6" and 8" motors fulfills ANSI B92.1, 1970, class 5.

6" motors have 15-teeth module. Pressure angle 30°.
8" motors have 23-teeth module. Pressure angle 30°. 10" and 12" motor shafts have keys.

The bearing system for the 6", 8" and 10" motors is stainless steel shaft against carbon bearing rings. The radial bearing rings of the 12" motors are made of stainless steel and NBR.

Shaft seal

The mechanical shaft seal is available in two variants: Ceramic/carbon and SiC/SiC. SiC/SiC is according to DIN 24960 and available for motors wound for

- 3 x 380-415 V, 50 Hz,
- 3 x 380 V, 60 Hz and
- 3 x 460 V, 60 Hz

only.

The material features high wear resistance and long durability, which ensures tightness and thereby limited replacement of the motor liquid. This is important when the pumped liquid contains sand.

Together with the shaft seal housing, the sand shield forms a labyrinth seal, which during normal operating conditions prevents penetration of sand particles into the shaft seal.

Motor

MMS motors 18.5 kW and up have a squirrel cage rotor with copper bars brazed to the short circuit rings by a silver alloy.

Note: MMS 6000 motors up to 15 kW have a cast aluminium squirrel cage rotor.

The rotor is dynamically balanced for smooth and vibration-free operation.

Fig. 11 MMS 12000 connection

Stator

The stator is a wet-wound construction in stainless steel to protect the motor, even in corrosive water. The stator design allows complete access to the winding for easy maintenance and rewinding. The construction of the laminations minimizes operating losses and improves motor performance.

In 6", 8", and 10" motors, the motor end shield is screwed onto the stator. A suitable centring assures alignment of rotor and stator.

Thrust bearing

The MICHELL/Kingsbury type of water-lubricated thrust bearing is very simple and most efficient.

The thrust capacity of the bearings is in accordance with NEMA standards for submersible motors, where these are applicable. See drawing to the below.

Upthrust bearing

The EPDM upthrust spacers placed above the rotating bearing part prevent motor damage during transportation or in case of upthrust in connection with start-up.

The upthrust bearing is an integrated part of the thrust bearing.

Diaphragm

The diaphragm (pos. no. 3) is fitted between the stator and the motor end shield. The diaphragm is dimensioned to equalize pressure variations caused by temperature rises in connection with intermittent operation.

TM01 7331 0604

Fig. 12 MMS 8000

1. Rotating bearing part
2. Stationary bearing part
3. Diaphragm.

Motor liquid

The motor is filled with glycerol-containing motor liquid, which is frost-proof down to -20°C .

The motor liquid has an anti-corrosive and lubricating function. To obtain the best protection, a concentration of 40% to 60% in water is recommended.

Should the glycerol-containing motor liquid mixed with water not be allowed for special applications, MMS motors may be filled even with fresh water.

Motors not filled with motor liquid are available on request. The following table indicates the freezing points obtainable with various percentages of glycerol-containing motor liquid.

Glycerol-containing motor liquid % volume	Freezing point [°C]
40	-3,9
50	-11,5
60	-15,2
70	-20
80	-26,7
90	-36,5

Cables

The 12" motors are connected by means of three single-core cables, approved for use with drinking water.

All cables are round.

The cable outlet of star-delta motors are displaced by 90 °.

Being an integrated part of the motor, the motor cable cannot be fitted/removed once the motor is assembled.

Cable length: 8 m.

Note: Sizing of the motor cable requires that it is submerged in water.

Wiring diagram

MMS motors are available for both direct-on-line and star-delta starting.

Motors wound for star-delta starting can also be connected for direct-on-line.

The starting wiring diagrams are shown below.

MMS motor, direct-on-line starting

The connection of MMS wound for direct-on-line starting:

TM03 2099 3705

Fig. 13 Motors wound for direct-on-line starting

MMS motor, star-delta starting

The connection of MMS wound for star-delta starting:

TM03 2100 3705

Fig. 14 Motors wound for star-delta starting

If star-delta starting is not required, but direct-on-line starting is, the MMS motor should be connected as shown in fig. 15.

TM03 2101 3705

Fig. 15 Motors wound for direct-on-line starting

MP 204

The MP 204 is an electronic motor protector, designed for the protection of an asynchronous motor or a pump.

The motor protector consists of:

- a cabinet incorporating transformers and electronics
- a control panel with operating buttons and display for reading of data.

The MP 204 operates with two sets of limits:

- a set of warning limits and
- a set of trip limits.

If one or more of the warning limits are exceeded, the motor continues to run, but the warnings will appear in the MP 204 display.

Some values only have a warning limit.

The warning can also be read out by means of the Grundfos R100 remote control.

If one of the trip limits is exceeded, the trip relay will stop the motor. At the same time, the signal relay is operating to indicate that the limit has been exceeded.

Applications

The MP 204 can be used as a stand-alone motor protector.

The MP 204 can be monitored via a Grundfos GENIbus.

The power supply to the MP 204 is in parallel with the supply to the motor. Motor currents up to 120 A are passed directly through the MP 204. The MP 204 protects the motor primarily by measuring the motor current by means of a true RMS measurement. The MP 204 disconnects the contactor if, for example, the current exceeds the preset value.

Secondarily, the pump is protected via temperature measuring by a Tempcon sensor, a Pt100/Pt1000 sensor and a PTC sensor/thermal switch.

The MP 204 is designed for single- and three-phase motors. In single-phase motors, the starting and run capacitors are also measured. Cos ϕ is measured in both single- and three-phase systems.

Benefits

The MP 204 offers these benefits:

- suitable for both single- and three-phase motors
- dry-running protection
- overload protection
- very high accuracy
- made for submersible pumps.

The MP 204 - many monitoring options

The MP 204 monitors the following parameters:

- Insulation resistance before start-up
- Temperature (Tempcon, Pt sensor and PTC/thermal switch)
- Overload/underload
- Overvoltage/undervoltage
- Phase sequence
- Phase failure
- Power factor
- Power consumption
- Harmonic distortion
- Operating hours and number of starts.

TM03 1471 2205

Fig. 16 MP 204

Five sizes of single-turn transformers, 120-999 A.

Note: Monitoring of motor temperature is not possible when single-turn transformers are used.

TM03 2033 3505

Fig. 17 Single-turn transformers

Product numbers

Product	Product number
MP 204	96079927
R100	625333
Single-turn transformers	
- Current transformerratio= 200:5, $I_{max.}$ = 120 A	96095274
- Current transformerratio= 300:5, $I_{max.}$ = 300 A	96095275
- Current transformerratio= 500:5, $I_{max.}$ = 500 A	96095276
- Current transformerratio= 750:5, $I_{max.}$ = 750 A	96095277
- Current transformerratio= 1000:5, $I_{max.}$ = 1000 A	96095278

Functions

- Phase-sequence monitoring
- Indication of current or temperature (user selection)
- Indication of temperature in °C or °F (user selection)
- 4-digit, 7-segment display
- Setting and status reading with the R100
- Setting and status reading via GENIbus.

Tripping conditions

- Overload
- Underload (dry running)
- Temperature (Tempcon, Pt sensor and PTC/thermal switch)
- Phase failure
- Phase sequence
- Overvoltage
- Undervoltage
- Power factor ($\cos \phi$)
- Current unbalance.

Warnings

- Overload
 - Underload
 - Temperature (Tempcon and Pt sensor)
 - Overvoltage
 - Undervoltage
 - Power factor ($\cos \phi$)
- Note:** In connection with single- and three-phase connection.
- Run capacitor (single-phase operation)
 - Starting capacitor (single-phase operation)
 - Loss of communication in network
 - Harmonic distortion.

Learning function

- Phase sequence (three-phase operation)
- Run capacitor (single-phase operation)
- Starting capacitor (single-phase operation)
- Identification and measurement of Pt100/Pt1000 sensor circuit.

External current transformers

When fitted with external current transformers, the MP 204 can handle currents from 120 to 999 A. Grundfos can supply approved current transformers from stock (200/5A, 300/5A, 500/5A, 750/5A, 1000/5A).

R100 remote control

The R100 remote control from Grundfos allows for wireless infrared remote control of your MP 204 Motor protector.

With the R100, you get access to a full range of options such as factory setting adjustment, service and fault finding.

Ready for bus communication

The MP 204 allows for monitoring and communication via GENIbus – a Grundfos-designed bus for exchange of pump data, alarms, status information, and setpoints. This enables users to connect the MP 204 to, for instance, SCADA systems.

Technical data - MP 204

Enclosure class	IP 20
Ambient temperature	-20 °C to +60 °C
Relative air humidity	99 %
Voltage range	100-480 VAC
Current range	3-999 A
Frequency	50 to 60 Hz
IEC trip class	1-45
Special Grundfos trip class	0.1 to 30 s
Voltage variation	- 25 %/+ 15 % of nominal voltage
Approvals	EN 60947, EN 60335, UL/CSA 508
Marking	CE, cUL, C-tick
Consumption	Max. 5 W
Plastic type	Black PC / ABS

	Measuring range	Accuracy	Resolution
Current without external current transformers	3-120 A	± 1 %	0.1 A
Current with external current transformers	120-999 A	± 1 %	1 A
Phase-to-phase voltage	80-610 VAC	± 1 %	1 V
Frequency	47-63 Hz	± 1 %	0.5 Hz
Power	0-1 MW	± 2 %	1 W
Power factor	0-0.99	± 2 %	0.01
Energy consumption	0-4x10 ⁹ kWh	± 5 %	1 kWh

IO 112	Description	Product number
	The IO 112 is a measuring module and a 1-channel protection unit for use in connection with the MP 204 motor protection unit. The module can be used for protection of pump against other factors than the electrical conditions, for instance dry-running. It can also be used as a stand-alone protection module. The IO 112 interface has three inputs for measured values one potentiometer for setting of limits indicator lights indicating the • measured value of the input • value of the limit set • alarm source • pump status. Electrical data: • Supply voltage: 24 VAC ±10 % 50/60 Hz or 24 VDC ±10 % • Supply current: Min. 2.4 A; max. 8 A • Power consumption: Max. 5 W - Ambient temperature: -25 °C to +65 °C • Enclosure class: IP 20	96651601

Control functions

This table describes the protection provided by the MP 204.

Control parameter	Function	Problem	Advantage
Temperature	MS The motor temperature is measured by means of the built-in Tempcon temperature transmitter and a signal is sent to the MP 204 via the phase leads. In the MP 204, the measured temperature is compared with the factory-set value (75 °C).	Overload, frequent starts/stops, operation against blocked discharge pipe, insufficient flow velocity past the motor.	Longer motor life, safe operating conditions, service indication.
	MMS The motor temperature is measured by means of the Pt100. The signal is sent to the MP 204 where the measured temperature is compared with the factory-set value. Temperature protection requires a submersible motor with a Pt100. The motor temperature must be monitored during frequency converter operation.		
Overvoltage/undervoltage	If the set trip value is exceeded, the motor will stop.	The installation is close to a transformer. The mains do not absorb load variations.	Important installation parameter, possibility of improving operating conditions.
Overload	The motor power input is measured on each of the three phases. The registered power input is an average of these three values. If the factory-set value is exceeded, the motor will stop.	Incorrect sizing of pump/motor, voltage supply failure, defective cable, blocking, wear or corrosion.	Longer pump life, safe operating conditions, service indication.
Underload (dry running)	The motor power input is measured on each of the three phases. The registered power input is an average of these three values. If the average value is lower than the factory-set value, the motor will stop.	Pump exposed to dry running or underload, for example caused by wear.	Conventional dry-running protection is no longer necessary, no extra cables.
Current unbalance	The power input of the motor is measured on each of the three phases.	Mains load is uneven, incipient motor defect, phase voltages diverging.	Motor protection against overload, service indication.
Phase sequence	The MP 204 and motor are installed so that the phase sequence corresponds to correct direction of rotation. The MP 204 monitors changes in the phase sequence.	Two phases are wrongly connected.	Ensures correct pump performance.
Phase failure	The MP 204 checks the phases connected. Phase failure will cause an alarm.	Phase failure.	Indication of phase failure, and alarm.

R100 menus

0. GENERAL

See the operating instructions for the R100.

1. OPERATION

- Operating mode
- Actual trip
- Actual warning 1
- Actual warning 2
- Alarm log 1
- Alarm log 2
- Alarm log 3
- Alarm log 4
- Alarm log 5.

2. STATUS

Display of

- Supply overview
- Average current
- Average voltage
- Tempcon sensor
- Pt100/Pt1000 sensor
- Power input and energy consumption (described in the following)
- Energy trip counter
- Phase sequence
- Current unbalance
- Operating hours and number of starts
- Trip counter of hours and starts
- Starting capacitor
- Run capacitor
- Insulation resistance
- Cos φ
- Harmonic distortion.

3. LIMITS

Display and setting of warning and trip limits.

- Tempcon sensor
- Pt sensor
- Tripping current
- Current warning
- Nominal voltage
- Voltage limits
- Current unbalance
- Starting capacitor
- Run capacitor
- Insulation resistance
- Cos φ trip
- Cos φ warning.

4. INSTALLATION

Setting and display of

- Supply mains
- **Trip class** (described in the following)
- Trip delay
- External current transformers
- Power-on delay
- **Restarting** (described in the following)
- **Automatic restarting** (described in the following)
- Tempcon sensor
- Pt sensor
- Insulation resistance measurement
- PTC/hermal switch
- Resetting of trip counters
- Service interval
- Number of automatic restarts
- Units/display
- MP 204 display
- GENIbus ID number
- Learning function.

Power input and energy consumption

Actual power input and motor energy consumption.

The energy consumption is an accumulated value which cannot be reset.

The power is calculated like this:

$$U_{\text{average}} = \frac{U_{L1-L2} + U_{L2-L3} + U_{L3-L1}}{3} [V]$$

$$I_{\text{average}} = \frac{I_{L1} + I_{L2} + I_{L3}}{3} [A]$$

$$\cos \phi_{\text{average}} = \frac{\cos \phi_{L1} + \cos \phi_{L2} + \cos \phi_{L3}}{3} [-]$$

$$P = U_{\text{average}} \cdot I_{\text{average}} \cdot \sqrt{3} \cdot \cos \phi_{\text{average}} [W]$$

Trip class

Line 1: Select IEC trip class (1 to 45).

If manual indication of trip delay in the case of overload is required, select trip class "P".

Factory setting:

- Cls (trip class): P.

Line 2: Select trip delay.

Factory setting:

- Dly (trip delay): 10 s.

Restarting

Set whether restarting after tripping is to be

- **Automatic** (factory setting)
- *Manual*.

Setting of time, see section "Automatic restarting".

Automatic restarting

Set the time after which the MP 204 is to attempt automatic restarting of motor after cut-out.

The time runs from the moment when the value which triggered the fault has returned to normal.

Factory setting:

- 300 s.

G100 - Gateway for communication with Grundfos products

The G100 offers a wide selection of options for integration of Grundfos products provided with GENIbus interface into main control and monitoring systems.

The G100 enables a pump installation to meet future demands for optimum pump operation in terms of reliability, operating costs, centralisation and automation.

GR5940

TM03 3743 0906

Product description

The G100 Gateway enables communication of operating data, such as measured values, setpoints, etc., between Grundfos products with GENIbus interface and a main network for control and monitoring.

As indicated in the illustration on page 28, the G100 is suitable for use in applications such as water supply, water treatment, wastewater, building automation and industry.

Common to the above applications is that downtime is usually costly, and extra investments are therefore often made to achieve maximum reliability by monitoring selected operating variables.

The day-to-day operation, such as starting and stopping of pumps, changing of setpoints, etc., can also be effected from the main system by communication with the G100. In addition, the G100 can be set up to send event-controlled status indications such as alarms via the SMS to mobile phones, and to make automatic alarm call-backs to a central management system.

Data logging

Besides the possibility of data communication, the G100 also offers logging of up to 350,000 time-stamped data. Subsequently, the logged data can be transmitted to the main system or a PC for further analysis in a spreadsheet or similar program.

For the data logging, the "PC Tool G100 Data Log" software tool is used. The tool is part of the PC Tool G100 package, which is included on delivery of the G100.

Other features

- Four digital inputs.
- Stop of all pumps in case of failing communication with the management system (optional).
- Access code for modem communication (optional).
- Alarm log.

Installation

Installation of the G100 is effected by the system integrator. The G100 is connected to the GENIbus as well as to the main network. Subsequently, all units on the GENIbus can be controlled from a central management system on the main network.

The "G100 Support Files" CD-ROM supplied with the G100 contains examples of programs to be used when the G100 is connected to the various main network systems. Included is also a description of the data points available in Grundfos products with GENIbus interface.

The "PC Tool G100" software tool can be used for the G100 installation and use.

Cable termination kit, type KM

TM00 7885 2296

Description

For watertight shrink-joining of motor cable and submersible drop cable.

Enables the joining of

- cables of equal size
- cables of different size
- a cable lead and a single lead

The joint is ready for use after a few minutes and requires no long hardening time as opposed to resin joints.

The joint cannot be separated.

Description	Version		Number of leads	Product number
	Motor cable	[mm ²]		
	Flat cable	6 - 10	4	116252
		10 - 16	3	
	Flat cable	16 - 25	3 4	116255
	3 single leads	1.5 - 6.0	3	116253
	3 single leads	10 - 25	3	116254
	4 single leads	1.5 - 6.0	4	116257
	4 single leads	6 - 25	4	116258
	Single lead *	35 - 120	1	116256

* Used for the repair or joining of single leads.
When ordering kits, please state the number required.

Cable termination kit, types M0 to M6

Submersible drop cable

TM00 7882 2296

Suitable for

- continuous application in groundwater and potable water (approved for potable applications)
- connection of electrical equipment such as submersible motors
- installation depths up to 500 metres and average loads.

Insulation and sheath are made of special EPR-based elastomer materials adapted to applications in water.
Maximum permissible water temperature: 60 °C.
Maximum permissible lead service temperature: 90 °C.
Further cable sizes are available on request.

Pt100

The Pt100 sensor offers these features:

- Continuous monitoring of the motor temperature
- Protection against too high motor temperature.

Protecting the motor against too high motor temperature is the simplest and cheapest way of avoiding reduced lifetime of the motor. The Pt100 ensures that operating conditions are not exceeded and indicates when it is time for service of the motor.

Monitoring and protection by means of a Pt100 require the following parts:

- Pt100 sensor
- PR 5714 relay
- Cable.

The PR 5714 relay is fitted with a Pt100 module. For both relays the following temperature limits are preset on delivery:

- 60 °C warning limit
- 75 °C stop limit.

Technical data

PR 5714 relay	
Enclosure class	IP 65 (mounted in a control panel)
Ambient temperature	-20 °C to +60 °C
Relative air humidity	95 % (condensating)
Voltage variation	• 1 x 24-230 VAC ± 10 %, 50-60 Hz. • 24-250 VDC ± 20 %.
Approvals	UL, DNV
Mark	CE

Drop cables

Grundfos offers submersible drop cables for all types of applications, i.e. 3-core cables, 4-core cables, single leads.

The choice of submersible drop cable depends on the application and type of installation.

Standard version: Maximum liquid temperature +60 °C.

Tables indicating cable dimensions in borehole

The tables indicate the maximum length of drop cables in metres from motor starter to pump at direct-on-line starting, and at different cable dimensions.

The lengths of the cables are calculated by means of the maximum current for cables according to IEC 364 and HD 384.

If, for example, the operating current is 10% lower than the rated current, the cable may be 10% longer than indicated in the table.

The calculation of the cable length is based on a maximum voltage drop of 3% of the rated voltage and a water temperature of maximum 30 °C.

To minimise operating losses, the cable cross-section may be increased compared to what is indicated in the table. This is economical only if:

- the borehole provides the necessary space
- the operating time of the pump is long or
- the operating voltage is below the rated voltage.

The table values are calculated on the basis of the following formula:

Maximum cable length of a three-phase submersible pump:

$$L = \frac{U \times \Delta U}{I \times 1.73 \times 100 \times \left(\cos \varphi \times \frac{\rho}{q} + \sin \varphi \times X_L \right)} \text{ [m]}$$

where

U = Rated voltage [V]

ΔU = Voltage drop [%]

I = Rated current of the motor [A]

q = Cross-section of submersible dropcable [mm²]

X_L = Inductive resistance: 0.078 x 10⁻³ [Ω/m]

cos φ = Power factor

sin φ = $\sqrt{1 - \cos^2 \varphi}$

ρ = Specific resistance: 0.02 [Ωmm²/m]

Example

Motor size:	30 kW, MMS 8000
Rated current:	64.0 A
Rated voltage:	3 x 400 V, 50 Hz
Starting method:	Direct-on-line
Power factor:	cos φ = 0.85
Voltage drop:	3%
Cross-section:	25 mm ²
sin φ:	0.54

$$L = \frac{400 \times 3}{64.0 \times 1.73 \times 100 \times \left(0.85 \times \frac{0.02}{25} + 0.54 \times 0.078 \times 10^{-3} \right)}$$

L = 150 m.

Sizing of cable

Calculation of the cross-section of the cable

Formula designations

U = Rated voltage [V]

ΔU = Voltage drop [%]

I = Rated current of the motor [A]

q = Cross-section [mm²]

X_L = Inductive resistance 0.078×10^{-3} [Ω/m]

$\cos\phi$ = Power factor

$\sin\phi = \sqrt{1 - \cos^2\phi}$

L = Length of cable [m]

Δp = Power loss [W]

$\rho = 1/\chi$

Materials of cable:

Copper: $\chi = 52 \text{ m}/\Omega \times \text{mm}^2$

Aluminium: $\chi = 35 \text{ m}/\Omega \times \text{mm}^2$

For calculation of the cross-section of the submersible drop cable, use the following formula:

DOL

$$q = \frac{I \cdot 1.73 \cdot 100 \cdot L \cdot \rho \cdot \cos\phi}{U \cdot \Delta U - (I \cdot 1.73 \cdot 100 \cdot L \cdot X_L \cdot \sin\phi)}$$

Star-delta

$$q = \frac{I \cdot 100 \cdot L \cdot \rho \cdot \cos\phi}{U \cdot \Delta U - (I \cdot 1.73 \cdot 100 \cdot L \cdot X_L \cdot \sin\phi)}$$

The values of the rated current (I) and the power factor ($\cos\phi$) can be read in the tables on pages 14-20.

Calculation of the power loss

For calculation of the power loss in the submersible drop cable, use the following formula:

$$\Delta p = \frac{3 \cdot L \cdot \rho \cdot I^2}{q}$$

Example:

Motor size: 45 kW, MMS 8000
 Rated current: $I_{1/1} = 96.5 \text{ A}$
 Voltage: 3 x 400 V, 50 Hz
 Starting method: Direct-on-line
 Required cable length: 200 m
 Water temperature: 25 °C

Cable selection:

Choice A: 3 x 150 mm²
 Choice B: 3 x 185 mm²

Calculation of power loss

Choice A:

$$\Delta p_A = \frac{3 \cdot L \cdot \rho \cdot I^2}{q}$$

$$\Delta p_A = \frac{3 \cdot 200 \cdot 0.02 \cdot 96.5^2}{150}$$

$$\Delta p_A = 745 \text{ W}$$

Choice B:

$$\Delta p_B = \frac{3 \cdot 200 \cdot 0.02 \cdot 96.5^2}{185}$$

$$\Delta p_B = 604 \text{ W}$$

Savings

Operating hours/year: h = 4000.

Annual saving (A):

$$A = (\Delta p_A - \Delta p_B) \cdot h = (745 \text{ W} - 604 \text{ W}) \cdot 4000 = 564000 \text{ Wh} = 564 \text{ kWh}$$

By choosing the cable size 3 x 185 mm² instead of 3 x 150 mm², an annual saving of 564 kWh is achieved.

Operating time: 10 years

Saving after 10 years (A_{10}):

$$A_{10} = A \cdot 10 = 564 \cdot 10 = 5640 \text{ kWh}$$

The saving in amount must be calculated in the local currency.

WebCAPS

WebCAPS is a **Web**-based **Computer Aided Product Selection** program available on www.grundfos.com.

WebCAPS contains detailed information on more than 185,000 Grundfos products in more than 20 languages.

In WebCAPS, all information is divided into 6 sections:

- Catalogue
- Literature
- Service
- Sizing
- Replacement
- CAD drawings.

Catalogue

This section is based on fields of application and pump types, and contains

- technical data
- curves (QH, Eta, P1, P2, etc.) which can be adapted to the density and viscosity of the pumped liquid and show the number of pumps in operation
- product photos
- dimensional drawings
- wiring diagrams
- quotation texts, etc.

Literature

In this section you can access all the latest documents of a given pump, such as

- data booklets
- installation and operating instructions
- service documentation, such as Service kit catalogue and Service kit instructions
- quick guides
- product brochures.

Service

This section contains an easy-to-use interactive service catalogue. Here you can find and identify service parts of both existing and discontinued Grundfos pumps. Furthermore, this section contains service videos showing you how to replace service parts.

Sizing

This section is based on different fields of application and installation examples, and gives easy step-by-step instructions in how to

- select the most suitable and efficient pump for your installation
- carry out advanced calculations based on energy consumption, payback periods, load profiles, life cycle costs, etc.
- analyse your selected pump via the built-in life cycle cost tool
- determine the flow velocity in wastewater applications, etc.

Replacement

In this section you find a guide to selecting and comparing replacement data of an installed pump in order to replace the pump with a more efficient Grundfos pump. The section contains replacement data of a wide range of pumps produced by other manufacturers than Grundfos.

Based on an easy step-by-step guide, you can compare Grundfos pumps with the one you have installed on your site. When you have specified the installed pump, the guide will suggest a number of Grundfos pumps which can improve both comfort and efficiency.

CAD drawings

In this section it is possible to download 2-dimensional (2D) and 3-dimensional (3D) CAD drawings of most Grundfos pumps.

These formats are available in WebCAPS:

2-dimensional drawings:

- .dxf, wireframe drawings
- .dwg, wireframe drawings.

3-dimensional drawings:

- .dwg, wireframe drawings (without surfaces)
- .stp, solid drawings (with surfaces)
- .eprt, E-drawings.

WinCAPS

Fig. 18 WinCAPS CD-ROM

WinCAPS is a **Windows-based Computer Aided Product Selection** program containing detailed information on more than 185,000 Grundfos products in more than 20 languages.

The program contains the same features and functions as WebCAPS, but is an ideal solution if no Internet connection is available.

WinCAPS is available on CD-ROM and updated once a year.
