## AUTOMATIC SELF-CLEANING DISC FILTER

AZUD HELIX AUTOMATIC FT is the range of AUTOMATIC SELF-CLEANING WATER FILTRATION EQUIPMENT using AZUD DISC FILTERS, for industrial, municipal and residential applications. Each filtration equipment is integrated by:

### AZUD DF-DISC DLP FILTER ELEMENTS

A group of devices that filtrates the water and enables the self-cleaning of the filtration media with low water and energy consumption:

- Monoblock SUPPORT AND FUNCTIONAL FRAME with 4 nozzles columns.
- MG or WS DISCS STACK located on the monoblock support, becomes the FILTRATION MEDIA.
- Patented centrifugal anti-clogging deflector AZUD HELIX SYSTEM.
- Plastic dual-plate CHECK VALVE to manage the flow of filtered water and flushing water.
- HYDRAULIC PISTON with spring that compress the discs stack during the filtration phase, and allows the disc stack decompression during the backwash phase.

The filtration element is housed inside a BASE AND LID with a tool-less opening system thanks to the safety clamp.

The AZUD HELIX AUTOMATIC FT filter is made of high-tech thermoplastic materials that guarantee its durability and reliability facing different water qualities and installation requirements.

Filtration degrees (micron)\*

MG Discs	WS Discs
■ 400	-
■ 200	-
■ 130	■ 130
■ 100	■ 100
-	■ 50
-	■ 20
-	■ 10
-	■ 5

Connection Ø	Filtration area per filter	Filtration volume per filter
2"	1620 cm <sup>2</sup> (251 in <sup>2</sup> )	2430 cm <sup>3</sup> (148 in <sup>3</sup> )
3"	3240 cm <sup>2</sup> (502 in <sup>2</sup> )	4860 cm <sup>3</sup> (297 in <sup>3</sup> )

\*Available AZUD discs with different filtration degrees.

### BACKWASH VALVES

Enable the autonomous and independent backwash of each filter, to guarantee the continuous filtered water supply.

### INLET, OUTLET AND DRAINAGE MANIFOLDS

Made of HDPE, with DIN/ANSI flange, grooved or PVC (to glue) connections, guarantee robustness, durability and maximum resistance to chemicals and to saline corrosion.

## FILTRATION PHASE

During filtration, water flows from the inlet manifold to the filter inside, passing through the anti-clogging deflector AZUD HELIX SYSTEM. This device generates a centrifugal helical effect that throws the heavy particles to the internal wall of the lid and away from the discs stack. This AZUD patent avoids the quick clogging of the filter, minimizing the backwash frequency.

The discs stack is compressed on the support frame thanks to a pre-loaded spring. Therefore, the water can overpass the discs stack only through the existing channels between the discs.

Water flows OUT-IN through the discs stack towards the outlet manifold, while particles bigger than the filtration degree are trapped in the discs.

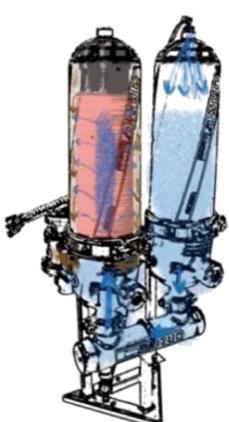

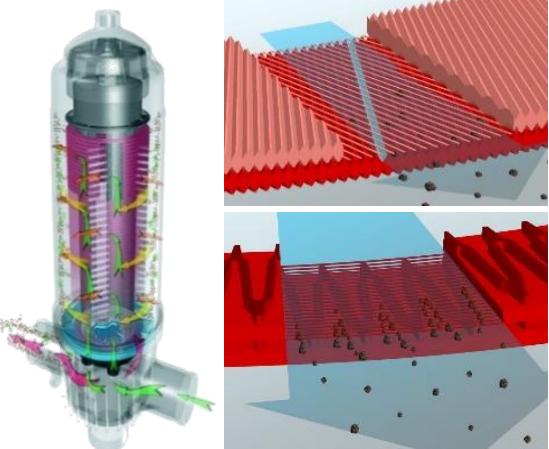

## BACKWASH PHASE

Automatic backwashing can be activated by differential pressure, by time trigger or by an external electrical signal.

The backwash valve of each filter can reverse the flow direction, allowing the filtered pressurized water to flow IN-OUT through the discs. The discs stack is decompressed and the high-speed flushing water through the spray nozzles create a tangential cleaning effect, flushing out the trapped particles.

The filtration equipment is cleaned sequentially, so while each filter is backwashed, the rest of the filters composing the filtration equipment are supplying filtered water.

### Air Assisted Backwash (AA)

Exclusive AZUD system for applications with high loads of organic or filamentous suspended solids.

A mix of water-air flowing at high speed backwashes each filter element, providing a more energetic and effective cleaning. Water savings 80% higher than conventional equipment.

## WORKING CONDITIONS

	Standard DLP	Air Assisted Backwash (AA)	High Pressure (HP)
<b>Maximum working pressure:</b>	10 bar (145 psi)	10 bar* (145 psi)	16 bar (232 psi)
<b>Max. pressure recommended:</b>	8 bar (116 psi)	6 bar* (87 psi)	14 bar (203 psi)
<b>Minimum working pressure:</b>	0.8 bar (11.6 psi)	0.8 bar (11.6 psi)	0.8 bar (11.6 psi)
<b>Minimum backwash pressure:</b>	1.5 bar (22 psi)	Compressed air pressure at 4.5	1.5 bar (22 psi)
<b>Minimum backwash flow:</b>	2.5 lps (2" - 3")    5.0 lps (4")	10 l of water per each 2" filter flushing	2.5 lps (3")
<b>Backwash time:</b>	15 - 25 seconds    20 - 30 seconds		15 - 25 seconds
<b>pH:</b>	4 - 11	CL series: 2 - 11	
<b>T°:</b>	≤ 60 °C (140 °F)		
<b>Electrical supply:</b>	110 / 220 V AC (50 / 60 Hz)		

\*The air pressure should be higher than the water pressure and it is recommended that the air pressure doesn't exceed the 6 bar.

## COMPETITIVE ADVANTAGES

### AZUD DISC

#### 2 DISC TYPES depending on each application requirements:

**AZUD MG disc:** grooved filtration channels on both sides of the disc.

> In-depth filtration, trapping along the disc channel even smaller particles than the filtration degree.

**AZUD WS disc:** different geometry and functionality on both sides of the disc.

> Surface filtration, with a large volume of particles retention thanks to the multiple intersection crosses between channels.

Larger disc diameter

**Increased filtration area**

Larger grooved channel

**Better in-depth filtration**  
**Increased particles retention capacity**

"Slim design" disc

**More discs per filtration element**

MG disc: increased passageways density

**More filtration channels per disc**

WS disc: more intersection crosses

### AZUD FILTRATION ELEMENT

Larger diameter of the AZUD disc and higher discs stack

**INCREASED FILTRATION AREA**

Larger filtration area and larger grooved channel of AZUD disc

**INCREASED FILTRATION VOLUME**

More discs and more filtration channels per disc

**INCREASED PARTICLES RETENTION CAPACITY**  
per cm<sup>2</sup>

 Patented centrifugal anti-clogging deflector AZUD HELIX SYSTEM

 Less backwash frequency  
Water and energy savings

Higher flushing nozzles density with multiple impact points

Better backwash efficiency

Individual filtration element with its own base and lid

No possibility of fouling between filters during the self-cleaning phase

DLP low pressure technology

Lower operation pressure

 Safety clamp

Energy saving

Safe operation

Tool-less opening system

**DLP Technology**  
Low Pressure Backflush  
Baja Presión de Limpieza

### AZUD DISCS FILTRATION EQUIPMENT

Modularity

Wide range of flow rates and configurations using a minimum number of components

Wide filtration range

Standard filtration degrees from 5 to 400 micron

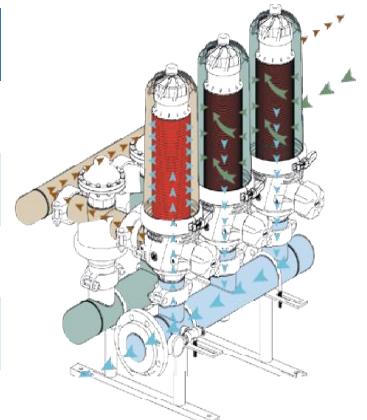

Different water qualities

Different materials and components meeting application requirements

Non-stop filtration

Sequential self-cleaning to guarantee the filtered water supply

## AZUD FILTRATION SYSTEM SIZING

A FILTRATION SYSTEM SIZING depends on:

- RAW WATER QUALITY, different water qualities depending on the RAW WATER SOURCE, the suspended solid particles concentration (TSS and turbidity), the particle type and the particle size.
- Selected FILTRATION DEGREE.
- INLET/OUTLET MANIFOLD DIAMETER; the same filtration equipment has different options regarding the inlet/outlet manifold diameter, depending on the expected flow rate, the installation requirements or future filtration system extensions. The maximum water velocity in the manifold is a limiting parameter to be considered in a filtration equipment selection.
- Filter equipment HEAD LOSS as per the size and type of the auxiliary elements (manifolds, flanges and valves).
- APPLICATION REQUIREMENTS AND CONFIGURATION.
- HYDRAULIC INTERACTION of the filtration system with the existing installation.

## QUICK SELECTION GUIDE

In order to define an APPROXIMATE SELECTION CRITERIA, it is considered just the RAW WATER SOURCE, providing a referential TSS value. The MAXIMUM FLOW RATE is given per FILTRATION ELEMENT depending on the available FILTRATION DEGREES range.

Quality	Raw water source	Filtration degree micron	TSS ppm	Flow rate per filter element (1620 cm <sup>2</sup> ) m <sup>3</sup> /h	Flow rate per filter element (1620 cm <sup>2</sup> ) gpm
<b>GOOD</b>	> Municipal water supply	<b>200 - 400</b>	0 - 75	26 - 28	114 - 123
	> Closed loop water recirculation system	<b>100 - 130</b>	0 - 50	24 - 26	106 - 114
	> Sea water taken from a beach well	<b>50</b>	0 - 25	13 - 14	57 - 62
	> Pre-treated water with multimedia filter or membrane technology	<b>5 - 10 - 20</b>	0 - 15	4 - 8	22 - 35
<b>AVERAGE</b>	> Deep water coming from a steady aquifer through a casing well, without suspended solids nor scaling salts	<b>200 - 400</b>	75 - 125	24 - 26	106 - 114
	> Open loop water recirculation system, with cold climates or good quality environmental	<b>100 - 130</b>	50 - 75	22 - 24	97 - 106
	> Clear and stable quality surface water (lakes and ponds, slow flowing rivers and canals)	<b>50</b>	25 - 50	12 - 13	53 - 57
	> Sea water taken far away from the coastline	<b>5 - 10 - 20</b>	15 - 25	3 - 7	18 - 31
<b>POOR</b>	> Reclaimed wastewater after tertiary treatment	<b>200 - 400</b>	125 - 175	22 - 24	97 - 106
	> Industrial process water with low load of suspended solids	<b>100 - 130</b>	75 - 100	20 - 22	88 - 97
	> Open loop water recirculation system, with hot climates or bad quality environmental	<b>50</b>	50 - 75	11 - 12	48 - 53
	> Bad quality surface water (lakes and ponds, rivers and canals) with increased biological growth and no chemical treatment	<b>5 - 10 - 20</b>	25 - 50	3 - 6	13 - 26
<b>VERY POOR</b>	> Well water from a poor quality aquifer	<b>200 - 400</b>	175 - 250	21 - 22	92 - 97
	> Sea water taken directly at the coastline	<b>100 - 130</b>	100 - 150	18 - 20	79 - 88
	> Industrial process water with high load of suspended solids	<b>50</b>	75 - 100	10 - 11	44 - 48
	> Surface water (lakes and ponds, rivers and canals) affected by floods and storm water with soil erosion	<b>5 - 10 - 20</b>	50 - 75	2 - 5	9 - 22

Check with AZUD Engineering Department in order to select the AZUD FILTRATION SYSTEM that best meets your application requirements.

## AZUD HELIX AUTOMATIC RANGE

## FRESH AND LOW SALINITY WATER Filtration equipment (TDS &lt; 6000 ppm)

## FT200

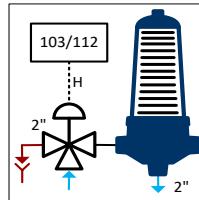

DLP

- Equipment with 1 - 12 Filters Ø 2" (rPA)
- 1 x 2"- Diaphragm 3-way backwash valve (rPA - SS 304 shaft)
- Hydraulic command (H)
- Control unit: FBC 103/112

## FT200

AA DLP

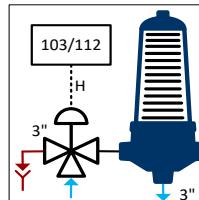

- Equipment with 1 - 10 Filters Ø 2" (rPA) - Air Assisted Backwash
  - 2 x 2"- Diaphragm 3-way backwash valve (rPA - SS 304 shaft)
  - Pneumatic command (PN)
  - Control unit: FBC 101/110 AA
- Q max. **130 micron**: 21 - 210 m<sup>3</sup>/h (92 - 925 gpm)  
Q max. **50 micron**: 14 - 140 m<sup>3</sup>/h (62 - 616 gpm)

## \*FT300

DLP

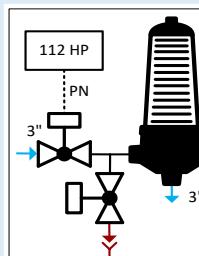

- Equipment with 2 - 8 Filters Ø 3" (rPA)
- 1 x 3"- Diaphragm 3-way backwash valve (rPA - SS 304 shaft)
- Hydraulic command (H)
- Control unit: FBC 103/112

Q max. **130 micron**: 52 - 208 m<sup>3</sup>/h (229 - 916 gpm)

## \*FT300

HP DLP

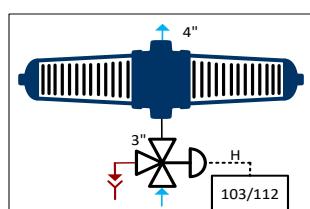

- Equipment with 2 - 8 Filters Ø 3" (Carbon steel) - P max: 16 bar
  - 2 x 3"- Butterfly 2-way backwash valve (metal - SS 316L plate)
  - Pneumatic command (PN)
  - Control unit: FBC 112 HP
- Q max. **130 micron**: 52 - 208 m<sup>3</sup>/h (229 - 916 gpm)  
Q max. **50 micron**: 28 - 112 m<sup>3</sup>/h (123 - 493 gpm)

## FT4DCL

DLP

- Equipment with 3 - 12 Double Filters Ø 4" (rPA)
- 1 x 3"- Diaphragm 3-way backwash valve (rPA - SS 304 shaft)
- Hydraulic command (H)
- Control unit: FBC 103/112

Q max. **130 micron**: 156 - 624 m<sup>3</sup>/h (687 - 2748 gpm)  
Q max. **50 micron**: 84 - 336 m<sup>3</sup>/h (370 - 1480 gpm)

\* Series not included in the catalogue. Please check with our Technical Department.

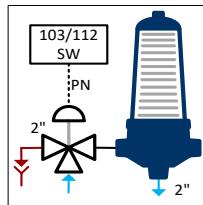

### HIGH SALINITY WATER Filtration equipment (TDS: 6000 - 35000 ppm)

- Equipment with 1 - 12 Filters Ø 2" (rPA)
- 1 x 2"- Diaphragm 3-way backwash valve (rPA - SS 316L shaft)
- Pneumatic command (PN)

**\*\*FT200**

**AW DLP**

Q max. **130 micron**: 24 - 288 m<sup>3</sup>/h (106 - 1268 gpm)  
 Q max. **50 micron**: 14 - 168 m<sup>3</sup>/h (62 - 740 gpm)

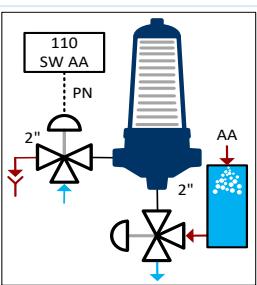

- Equipment with 1 - 10 Filters Ø 2" (rPA) - Air Assisted Backwash
- 2 x 2"- Diaphragm 3-way backwash valve (rPA - SS 316L shaft)

**\*\*FT200**

**AW AA**

**DLP**

Q max. **130 micron**: 21 - 210 m<sup>3</sup>/h (92 - 925 gpm)  
 Q max. **50 micron**: 14 - 140 m<sup>3</sup>/h (62 - 616 gpm)

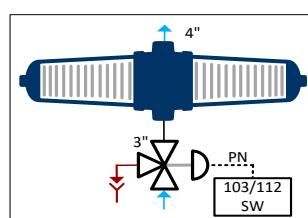

- Equipment with 3 - 12 Double Filters Ø 4" (rPA)
- 1 x 3"- Diaphragm 3-way backwash valve (rPA - SS 316L shaft)
- Pneumatic command (PN)

**\*\*FT4DCL**

**AW DLP**

Q max. **130 micron**: 156 - 624 m<sup>3</sup>/h (687 - 2748 gpm)  
 Q max. **50 micron**: 84 - 336 m<sup>3</sup>/h (370 - 1480 gpm)

\*\* The saline corrosion resistance of Stainless Steel depends not only on TDS value, but on concentration of chlorides and oxygen presence as well.

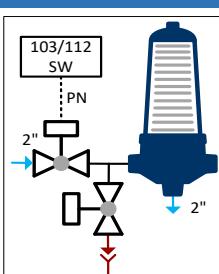

### SEA WATER Filtration equipment (TDS: 35000 - 55000 ppm)

- Equipment with 2 - 8 Filters Ø 2" (rPA).
- 2 x 2"- Butterfly 2-way backwash valve (rPP - PP plate)
- Pneumatic command (PN)

**\*700**

**SW DLP**

Q max. **130 micron**: 52 - 208 m<sup>3</sup>/h (229 - 916 gpm)  
 Q max. **50 micron**: 28 - 112 m<sup>3</sup>/h (123 - 493 gpm)

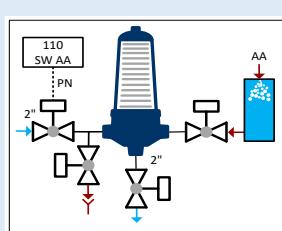

- Equipment with 1 - 10 Filters Ø 2" (rPA) - Air Assisted Backwash
- 4 x 2"- Butterfly 2-way backwash valve (rPP - PP plate)

**\*700**

**SW AA**

**DLP**

Q max. **130 micron**: 26 - 260 m<sup>3</sup>/h (114 - 1145 gpm)  
 Q max. **50 micron**: 14 - 140 m<sup>3</sup>/h (62 - 620 gpm)

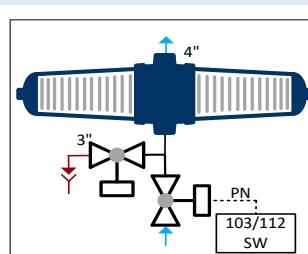

- Equipment with 3 - 12 Double Filters Ø 4" (rPA)
- 2 x 3"- Butterfly 2-way backwash valve (rPP - PP plate)
- Pneumatic command (PN)

**\*800**

**SW DLP**

Q max. **130 micron**: 156 - 624 m<sup>3</sup>/h (687 - 2748 gpm)  
 Q max. **50 micron**: 84 - 336 m<sup>3</sup>/h (370 - 1480 gpm)

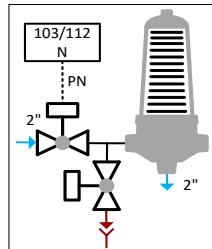

\* Series not included in the catalogue. Please check with our Technical Department.

## CHLORINATED WATER Filtration equipment

- Equipment with 2 - 8 Filters Ø 2" (rPP) - Chlorine resistant
- 2 x 2"- Butterfly 2-way backwash valve (rPP - PP plate)
- Pneumatic command (PN)
- Control unit: FBC 103/112 N

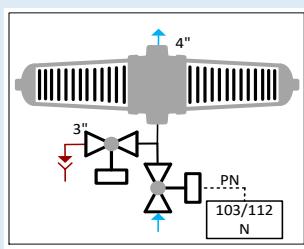

**\*700****CL DLP**

Q max. **130 micron**: 52 - 208 m<sup>3</sup>/h (229 - 916 gpm)  
 Q max. **50 micron**: 28 - 112 m<sup>3</sup>/h (123 - 493 gpm)

**\*800****CL DLP**

- Equipment with 3 - 12 Double Filters Ø 4" (rPP) - Chlorine resistant
- 2 x 3"- Butterfly 2-way backwash valve (rPP - PP plate)
- Pneumatic command (PN)
- Control unit: FBC 103/112 N

Q max. **130 micron**: 156 - 624 m<sup>3</sup>/h (687 - 2748 gpm)  
 Q max. **50 micron**: 84 - 336 m<sup>3</sup>/h (370 - 1480 gpm)

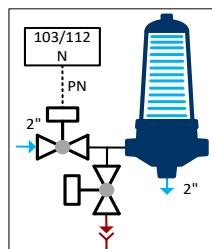

## DRINKING WATER Filtration equipment

- Equipment with 2 - 8 Filters Ø 2" (rPA-fg) - Food grade
- 2 x 2"- Butterfly 2-way backwash valve (rPP - PP plate)
- Pneumatic command (PN)
- Control unit: FBC 103/112 N

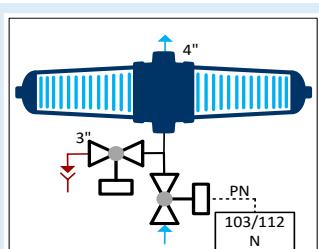

**\*700****DW DLP**

Q max. **130 micron**: 52 - 208 m<sup>3</sup>/h (229 - 916 gpm)  
 Q max. **50 micron**: 28 - 112 m<sup>3</sup>/h (123 - 493 gpm)

**\*800****DW DLP**

- Equipment with 3 - 12 Double Filters Ø 4" (rPA-fg) - Food grade
- 2 x 3"- Butterfly 2-way backwash valve (rPP - PP plate)
- Pneumatic command (PN)
- Control unit: FBC 103/112 N

Q max. **130 micron**: 156 - 624 m<sup>3</sup>/h (687 - 2748 gpm)  
 Q max. **50 micron**: 84 - 336 m<sup>3</sup>/h (370 - 1480 gpm)

*\* Series not included in the catalogue. Please check with our Technical Department.*

**HIGH FLOW Filtration Systems****4DC DLP - System for fresh and low salinity water (TDS < 6000 ppm)****4DC SW DLP - System for high salinity water and sea water (TDS: 6000 - 55000 ppm)**

- **MODULES with 5-12 double filters Ø 4" (rPA)**

Q max. per module (130 micron): 260 - 624 m<sup>3</sup>/h (1145 - 2748 gpm)Q max. per module (50 micron): 140 - 336 m<sup>3</sup>/h (616 - 1480 gpm)**\*4DC****DLP**

- > BACKWASH VALVES per module
- Diameter and technical features to be selected depending on application requirements.

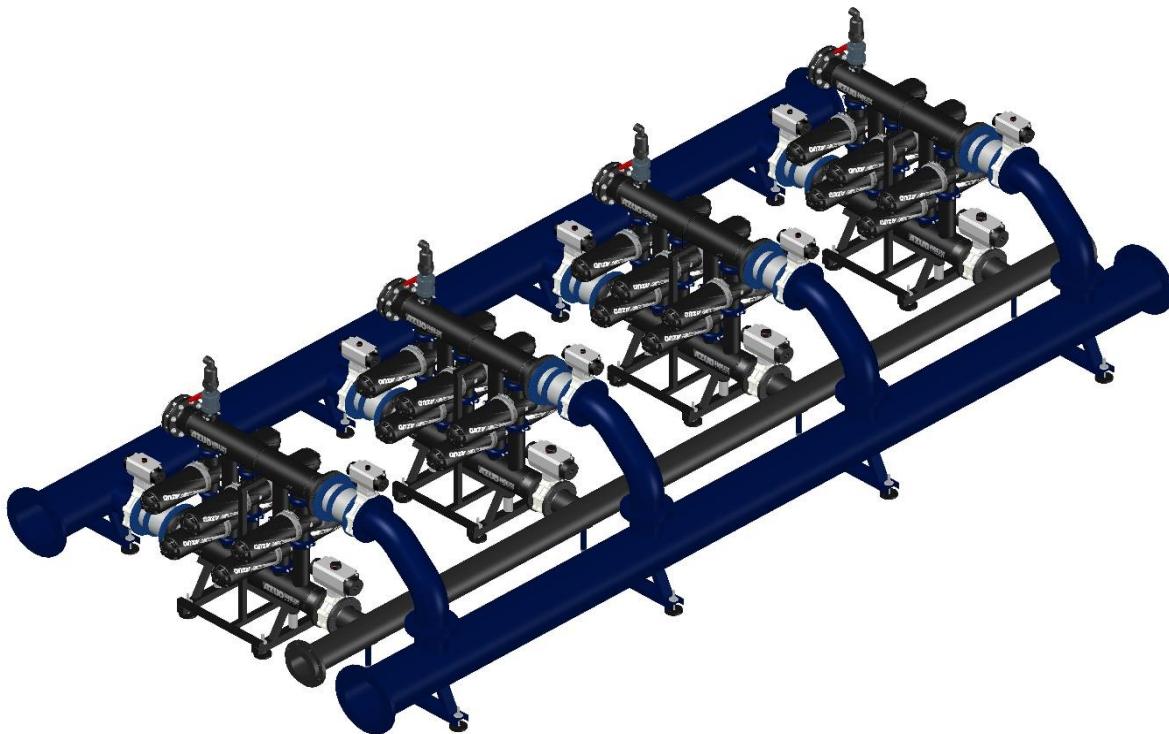

&gt; Pneumatic command (PN)

**\*4DC****SW DLP**

- **FILTRATION SYSTEM with 4-12 MODULES**

Q max. per system with modules of 12 double filters 4" (130 micron): 2496 - 7488 m<sup>3</sup>/h (10991 - 32972 gpm)Q max. per system with modules of 12 double filters 4" (50 micron): 1344 - 4032 m<sup>3</sup>/h (5918 - 17754 gpm)

- External backwash source option
- Vertical installation for reduced footprint
- Automation with Control Unit FBC or with PLC/HMI

*\* Series not included in the catalogue. Please check with our Technical Department.*

## AZUD CONTROL UNITS

The AZUD control unit is a compact system that includes all the required devices needed for the detection, activation and command of the backwash cycle of discs filtration equipment AZUD HELIX AUTOMATIC FT.

Its robust design, Plug&Play installation and easy operation, ensures the total autonomy of the filtration equipment, to guarantee the continuous filtered water supply.

The AZUD control unit includes the following devices:

- PROGRAMMER that allows the user to configure the number of filtration stations and the self-cleaning cycle of each filtration station. The self-cleaning of the filtration equipment can be activated either by differential pressure, by time trigger or by an external electrical signal.
- DISPLAY, to show the filtration equipment status and the information about the self-cleaning of every filtration station.
- PROTECTION HOUSING IP65, including the auxiliary components (transformer, relay, fuse and terminal connections).
- DIFFERENTIAL PRESSURE GAUGE, with visual indicator and electrical switch for the backwash activation.
- SOLENOIDS, for the hydraulic/pneumatic command of the backwash valves.

AZUD has available two Control Unit types with different characteristics depending on each application requirements:

	AZUD FBC Standard Control Unit	AZUD LOGIC - HMI Control Unit
Programmer type	Controller	PLC
Screen	Monocolour display	Colour touch HMI
Protection housing	Plastic box IP65 with a window located on a polypropylene panel	Closed metallic cabinet IP 65
Safety elements	Fuses / Capacitor (VDR)	Thermal overload / Differential protection / Emergency press button / General switch
Languages	Two languages; English/Spanish or French/German	Configurable multi-language
Warnings and Alarms	Optional	Included
Communication	Voltage free contact	Modbus Ethernet IP
Instrumentation	Digital switch	Analog sensor
Control voltage	24 V AC	24 V DC
User levels	Open	Password protected
Operational parameter data	Visual reading	Historical parameter database

**AZUD FBC Standard Control Units****Control Units for fresh and low salinity water (TDS < 6000 ppm)****AZUD FBC  
103/112**

Controller:	Self-cleaning is activated by differential pressure, by time trigger or by an external electrical signal
DP switch:	0.1 - 1.0 bar - Visual indicator
Voltage:	110 / 220 V (50 / 60 Hz)
Solenoids:	3-way type NC. Hydraulic command
Languages:	English/Spanish & French/German
Valid for:	<b>FT200 DLP, FT300 DLP, FT4DCL DLP</b>

**AZUD FBC

AZUD HELIX AUTOMATIC FT203 / 4 FX AA 130 micron

① ② ③ ④

## Filtration equipment for

FRESH AND LOW SALINITY WATER (TDS &lt; 6000 ppm)

- Equipment with 1 - 10 Filters Ø 2" (rPA) - Air Assisted Backwash

- 2 x 2"- Diaphragm 3-way backwash valve (rPA - SS 304 shaft)

- Pneumatic command (PN)

- Inlet/Outlet HDPE manifolds: Ø 2"-8" (50-250 mm) - Flange/Grooved

- Drainage HDPE manifold: Ø 3" (90 mm) - Grooved/PVC (Glue)

Filtration degrees  
(micron)

1-10 filters: 400, 200, 130, 100, 50, 20, 10, 5

④

Maximum working pressure: 10 bar\* (145 psi)

Minimum working pressure: 0.8 bar (11.6 psi)

Minimum backwash pressure: Compressed air pressure at 4.5 bar

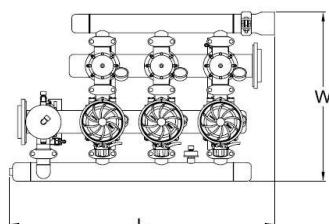

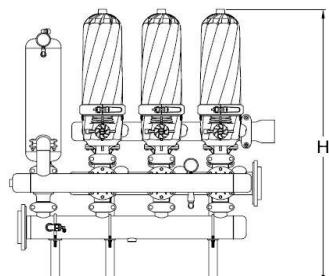

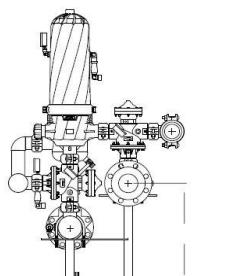

Minimum backwash flow: 10 l of water per each 2" filter flushing

Electrical supply: 110 / 220 V AC (50 / 60 Hz)

*The air pressure should be higher than the water pressure and it is recommended that the air pressure doesn't exceed the 6 bar.*

**AZUD MODULAR 100** is the range of discs and screen manual filters for low flow rates (up to 25 m<sup>3</sup>/h), providing the maximum quality and security filtration with the minimum maintenance.

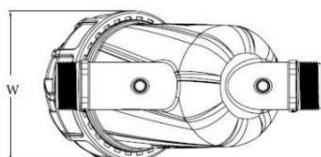

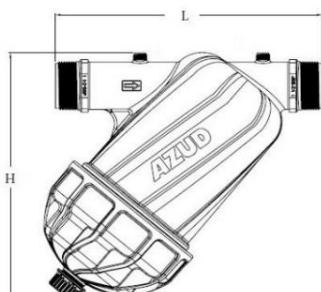

### Main features

- > MAXIMUM QUALITY AND SECURITY FILTRATION, with a range of filtration degrees from 100 to 530 micron.
- > INCREASED FILTRATION AREA and INCREASED CAPACITY OF PARTICLES REMOVAL.
- > MODULARITY. Wide range of flow rates, filtration degrees and different configurations using a minimum number of components.
- > LOWER MAINTENANCE AND WATER SAVING. Large filtration area that minimizes the maintenance labours and the water consumption.
- > RESISTANCE. Made of technical thermoplastics, without moving parts susceptible to wear. Excellent resistance to chemicals and to saline corrosion.
- > Threaded CLOSURE SYSTEM for the filter element that allows an easy decompression of the discs stack for cleaning labours, and avoids the accidental loss of discs.
- > SEALING GASKET PLACED INSIDE THE FILTER LID, avoiding its loss or damage during maintenance labours.
- > AUXILIARY CONNECTIONS. Threaded connection to allow rapid evacuation and pressure gauges.
- > EASY INSTALLATION AND MAINTENANCE. The filter element can be easily pulled out for cleaning with no tool needed.

**AZUD SPIRAL CLEAN** is the range of semiautomatic screen filters providing the maximum quality and security filtration. They have an innovative flushing system through a suction scanner, to guarantee an effective cleaning of the screen with no need of disassembling it and with no interruption of the filtered water supply.

Filtration degrees (micron)	Screen	200, 130, 100

### Main features

- > MAXIMUM QUALITY AND SECURITY FILTRATION, with a range of filtration degrees from 100 to 200 micron.
- > MODULARITY. Wide range of flow rates, filtration degrees and different configurations using a minimum number of components.
- > WATER SAVING. Large filtration area minimizes the cleaning frequency and so the water consumption.
- > RESISTANCE. Made of technical thermoplastics providing excellent resistance to chemicals and to saline corrosion.
- > EFFECTIVE AND EASY CLEANING. The screen is cleaned thanks to the manual turn of a handle that moves the suction scanner along the internal surface of the screen.
- > NON-STOP SUPPLY OF FILTERED WATER. It is not necessary to disassemble the filter and remove the screen for cleaning.
- > EASY INSTALLATION AND MAINTENANCE. The filter element can be easily pulled out with no tool needed.

**AZUD HELIX SYSTEM** is the range of **MANUAL DISC FILTERS** that, thanks to the anti-clogging deflector AZUD HELIX SYSTEM and its higher filtration area, provides the maximum quality and security filtration with the minimum maintenance.

### Main features

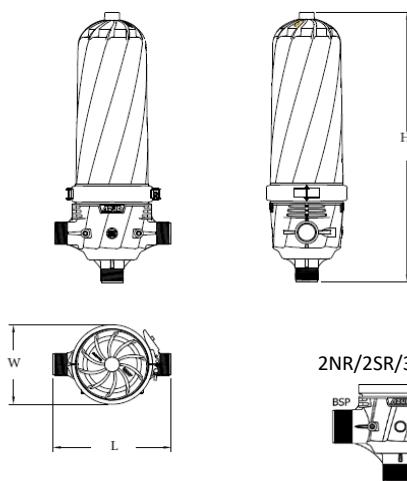

**AZUD HELIX SYSTEM.** AZUD patented centrifugal deflector that avoids the quick clogging of the filter, minimizing the cleaning frequency.

- > MAXIMUM QUALITY AND SECURITY FILTRATION, with a wide range of filtration degrees from 5 to 400 micron.
- > MODULARITY. Wide range of flow rates, filtration degrees and different configurations with a minimum number of components.
- > INCREASED FILTRATION AREA and INCREASED CAPACITY OF PARTICLES REMOVAL.
- > RESISTANCE. Made of technical thermoplastics providing excellent resistance to chemicals and to saline corrosion.
- > CLOSURE SYSTEM that allows the decompression of the discs stack for cleaning and avoids the accidental loss of discs.
- > EASY INSTALLATION AND MAINTENANCE. The filter element can be easily pulled out for cleaning with no tool needed.
