

# **POWER UNIT**

## **- Mounting and switch-on instructions -**

Issued on 06/07/2020

R.01

- This manual is integral and essential to the product. Carefully read the instructions contained herein as they provide important hints for use and maintenance safety.
- This device is to be used only for the purposes it has been designed to. Other uses should be considered improper and dangerous. The manufacturer is not responsible for possible damages caused by improper, erroneous and irrational uses.
- Enertronica Santerno S.p.A. is responsible for the product in its original setting.
- Any changes to the structure or operating cycle of the product must be performed or authorized by Enertronica Santerno S.p.A.
- Enertronica Santerno S.p.A. assumes no responsibility for the consequences resulting by the use of non-original spare-parts.
- Enertronica Santerno S.p.A. reserves the right to make any technical changes to this manual and to the product without prior notice. If printing errors or similar are detected, the corrections will be included in the new releases of the manual.
- The information contained herein is the property of Enertronica Santerno S.p.A. and cannot be reproduced. Enertronica Santerno S.p.A. enforces its rights on the drawings and catalogues according to the law.

## About this document

### WARNING !

Read this documentation carefully before starting any work.

- Please observe the safety instructions!

## Document description

### Further documents

For certain tasks, information is available in further documents.

Document	Contents/topics
15V0132B100 Quick Reference Card	Brief information about operation and device properties of the product
15R0132B100 Commissioning document	Fundamental information for the installation and commissioning of the product
15W0132B101 "Functional safety" configuration document	Basic information on configuring "functional safety" of the product
15W0132B103 Configuration document	Basic information on project planning and ordering the product

## Notations and conventions

This document uses the following conventions to distinguish different types of information:

Numeric notation			
	Decimal separator	Point	The decimal point is always used. Example: 1 234.56
Text			
	Engineering tools	» «	Software Example: »Engineer«, »Remote Sinus«
Icons			
	Page reference	¶	Reference to another page with additional information Example: ¶ 16 = see page 16
	Documentation reference	>	Reference to another documentation with additional information Example: , 15Pxxx = see documentation 15Pxxx

## Layout of the safety instructions

### DANGER !

Indicates an extremely hazardous situation. Failure to comply with this instruction will result in severe irreparable injury and even death.

### WARNING !

Indicates an extremely hazardous situation. Failure to comply with this instruction may result in severe irreparable injury and even death.

### CAUTION !

Indicates a hazardous situation. Failure to comply with this instruction may result in slight to medium injury.

### NOTICE

Indicates a material hazard. Failure to comply with this instruction may result in material damage.

## Safety instructions

Disregarding the following basic safety measures and safety information may lead to severe personal injury and damage to property!

Observe all specifications of the corresponding documentation supplied. This is the precondition for safe and trouble-free operation and for obtaining the product features specified.

Please observe the specific safety information in the other sections!

### DANGER !

Electrical voltage

Possible consequences: Death or severe injuries

- ▶ Any work on the inverter must only be carried out in the deenergised state.
- ▶ After switching off the mains voltage, wait for at least 3 min before you start working.

## Basic safety instructions

### DANGER !

Dangerous electrical voltage

Death or severe injuries from electric shock.

- ▶ Any work on the inverter must only be carried out in a deenergized state.
- ▶ After switching off the mains voltage, observe the signs on the product.

## Personnel

The product must only be used by qualified personnel. IEC 60364 or CENELEC HD 384 define the skills of these persons:

- They are familiar with installing, mounting, commissioning, and operating the product.
- They have the corresponding qualifications for their work.
- They know and can apply all regulations for the prevention of accidents, directives, and laws applicable at the place of use.

## Process engineering

The procedural notes and circuit details described are only proposals. It is up to the user to check whether they can be adapted to the particular applications. Santerno does not take any responsibility for the suitability of the procedures and circuit proposals described.

## Device protection

- The maximum test voltage for insulation tests between a control potential of 24 V and PE must not exceed 110 V DC (EN 61800-5-1).

### Application as directed

- The product must only be operated under the operating conditions prescribed in this documentation.
  - The product meets the protection requirements of 2014/35/EU: Low-Voltage Directive.
  - The product is not a machine in terms of 2006/42/EU: Machinery Directive.
  - Commissioning or starting the operation as directed of a machine with the product is not permitted until it has been ensured that the machine meets the regulations of the EU Directive 2006/42/EU: Machinery Directive; observe EN 60204-1.
  - Commissioning or starting operation as directed is only permissible if the EMC Directive 2014/30/EU is complied with.
  - The harmonised standard EN 61800-5-1 is applied.
  - The product is not a household appliance, but is only designed as a component for commercial or professional use in terms of EN 61000-3-2.
  - The product can be used according to the technical data if drive systems have to comply with categories according to EN 61800-3.
- In residential areas, the product may cause EMC interferences. The operator is responsible for taking interference suppression measures.
- The product must only be actuated with motors that are suitable for the operation with inverters.

The user is not allowed to change inverters that come with integrated safety technology.

The safety module must not be removed. If the safety module is defective, the inverter has to be replaced.

### Handling

- Never commission the product in the event of visible damage.
- The product must never be technically modified.
- Never commission the product before assembly has been completed.
- The product must never be operated without required covers.
- Establish, separate and change all electrical connections only in deenergised state!

## Safety instructions

### Residual hazards

#### Residual hazards

Even if notes given are taken into consideration and protective measures are implemented, the occurrence of residual risks cannot be fully prevented.

The user must take the residual hazards mentioned into consideration in the risk assessment for his/her machine/system.

If the above is disregarded, this can lead to severe injuries to persons and damage to property!

#### Product

Observe the warning labels on the product!

Icon	Description
	<b>Electrostatic sensitive devices:</b> Before working on the product, the staff must ensure to be free of electrostatic charge!
	<b>Dangerous electrical voltage</b> Before working on the product, make sure there is no voltage applied to the power terminals! After mains disconnection, the power terminals will still carry the hazardous electrical voltage for the time given next to the symbol!
	<b>High leakage current:</b> Carry out fixed installation and PE connection in compliance with EN 61800-5-1 or EN 60204-1!
	<b>Hot surface:</b> Use personal protective equipment or wait until the device has cooled down!

#### Motor protection

With some settings of the inverter, the connected motor can be overheated.

- E. g. by longer operation of self-ventilated motors at low speed.
- E. g. by longer operation of the DC-injection brake.

#### Protection of the machine/system

Drives can reach dangerous overspeeds.

- E. g. by setting high output frequencies in connection with motors and machines not suitable for this purpose.
- The inverters do not provide protection against such operating conditions. For this purpose, use additional components.

Switch contactors in the motor cable only if the controller is inhibited.

- Switching while the inverter is enabled is only permissible if no monitoring functions are activated.

#### Motor

If there is a short circuit of two power transistors, a residual movement of up to 180°/number of pole pairs can occur at the motor! (e. g. 4-pole motor: residual movement max.  $180^\circ/2 = 90^\circ$ ).

#### Degree of protection - protection of persons and device protection

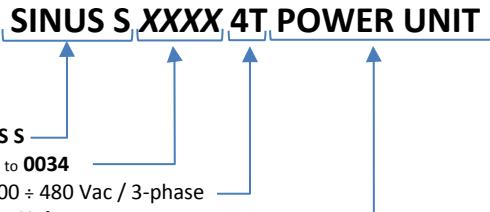

- Information applies to the mounted and ready-for-use state.
- Information does not apply to the wire range of the terminals.
  - Terminals that are not wired have low protection against physical contact.
  - Terminals for large cable cross-sections have lower classes of protection, e. g. from 15 kW IP10 only.

## Product information

### Identification of the products

In tables, the first 15 digits of the corresponding product code are used to identify the products:

#### Product code:

Product family: **SINUS S**  
 Model: **0001 to 0034**  
 Voltage class: **4T: 400 ÷ 480 Vac / 3-phase**  
 Part: **Power Unit**

#### Example:

Product code	Meaning
SINUS S 0007 4T POWER UNIT	Inverter of the SINUS S product family Model 0007 Voltage Class 400 ÷ 480 Vac / 3-phase

#### Example:

Product code	Meaning
SINUS S 0034 4T POWER UNIT	Inverter of the SINUS S product family Model 0034 Voltage Class 400 ÷ 480 Vac / 3-phase

## Features

### SIZE 6

**SINUS 0020 4T POWER UNIT: 15.0 kW HD**

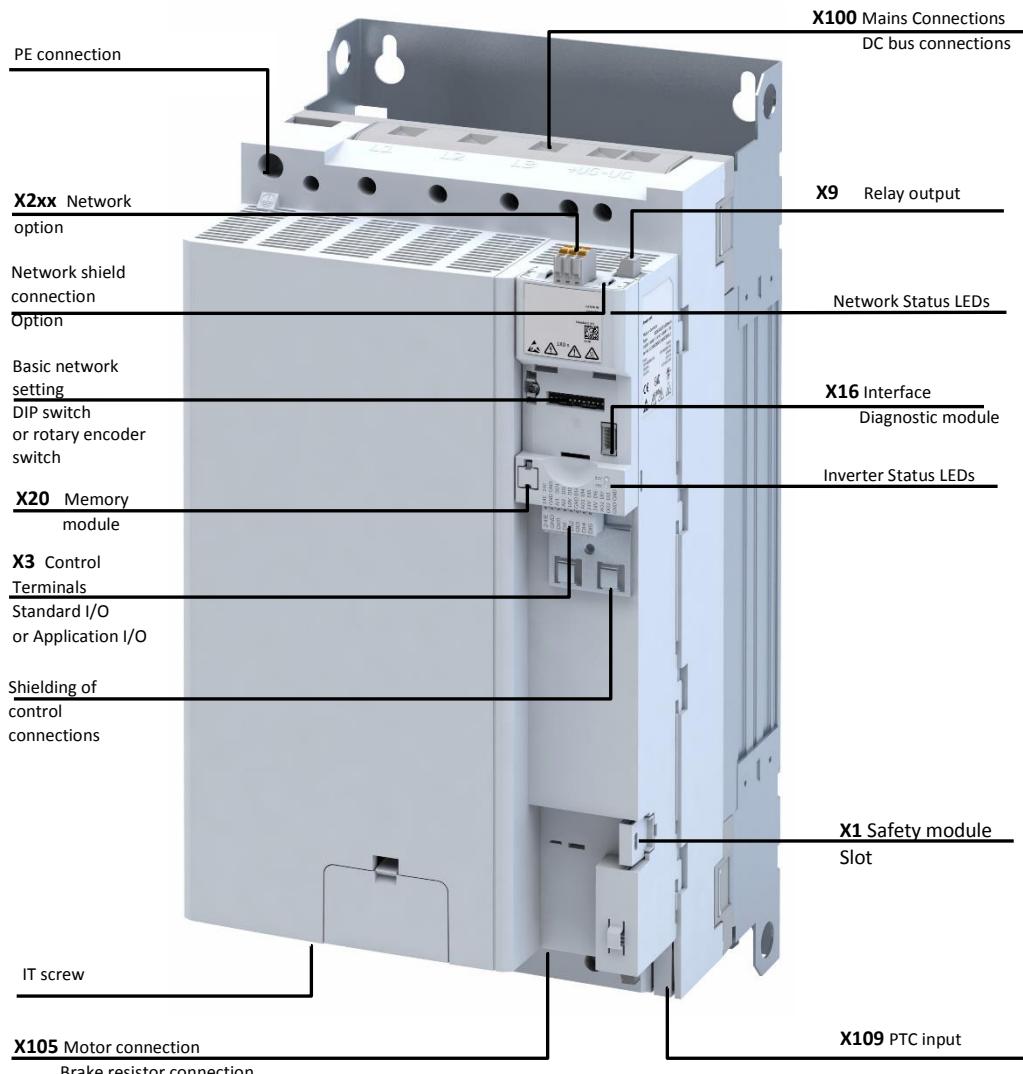

**SINUS 0025 4T POWER UNIT: 18.5 kW HD**

**SINUS 0030 4T POWER UNIT: 22.0 kW HD**

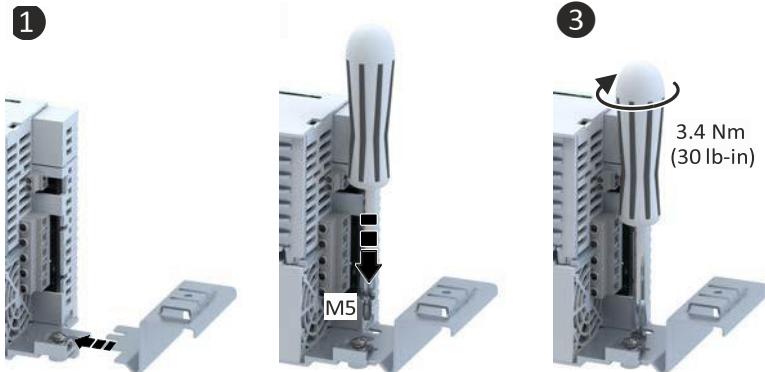

**SIZE 7**

**SINUS 0034 4T POWER UNIT: 30.0 kW HD**

Preparation

**Installation of shield connection sheet for the motor cable 0.25 kW to 4 kW (optional accessories)**

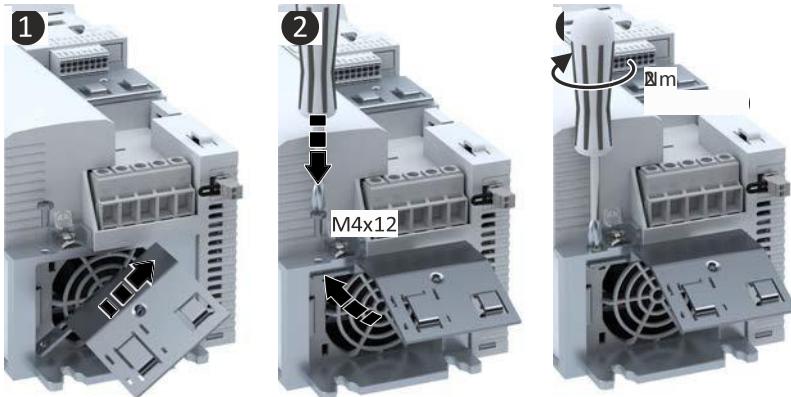

Together with the inverter, the shield connection sheet is screwed onto the mounting plate.

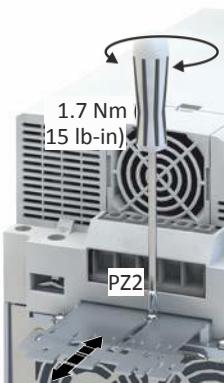

**Installation of shield connection sheet for the motor cable 5.5 kW (optional accessories)**

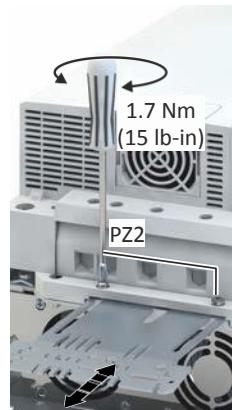

Installation of shield connection sheet for the motor cable 7.5 kW to 11 kW (optional accessories)

Installation of shield connection sheet for  
motor cable 15 kW to 22 kW

Installation of shield connection sheet for motor  
cable 30 kW

## Electrical installation

### Important notes

#### DANGER !

##### Electrical voltage

Possible consequences: Death or severe injuries

- ▶ Any work on the inverter must only be carried out in the de-energised state.
- ▶ After switching off the mains voltage, wait for at least 3 min before you start working.

#### DANGER !

##### Dangerous electrical voltage

The leakage current against earth (PE) is > 3.5 mA AC or > 10 mA DC.

Possible consequences: Death or severe injuries when touching the device in the event of an error.

- ▶ Implement the measures requested in EN 61800-5-1 or EN 60204-1. Especially:
- ▶ Fixed installation
- ▶ The PE connection must comply with the standards (PE conductor diameter  $\geq 10 \text{ mm}^2$  or use a double PE conductor)

## Connection to the IT system

For a trouble-free operation on the IT system, observe the following measures:

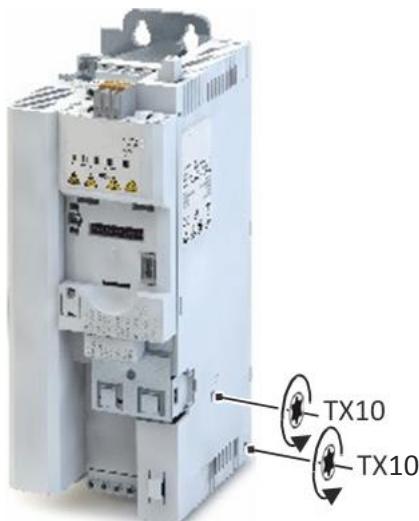

- Connect an isolating transformer upstream.
- Remove the IT screws. Otherwise the monitoring devices of the IT system will be triggered because internal components are connected to protective earth (PE).

The use of the safety-related function STO is not permissible in the IT system.

### Control connections

Connection description		Control terminals
Connection		X3
Connection type		Pluggable spring terminal
Max. cable cross-section mm <sup>2</sup>	mm <sup>2</sup>	1.5
Max. cable cross-section AWG	AWG	16
Stripping length	mm	9
Stripping length	inch	0.35
Tightening torque	Nm	-
Tightening torque	lb-in	-
Required tool		0.4 x 2.5

**CANopen**

The network must be terminated with a  $120\ \Omega$  resistor at the first and last physical node.

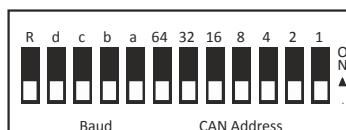

Set the "R" DIP switch to ON at these network nodes.

**Typical topologies**

Connection description		CANopen	
Connection		X216	
Connection type		pluggable double spring terminal	
Max. cable cross-section	mm <sup>2</sup>	2.5	
Max. cable cross-section	AWG	12	
Stripping length	mm	10	
Stripping length	inch	0.39	
Tightening torque	Nm	-	
Tightening torque	lb-in	-	
Required tool		0.4 x 2.5	

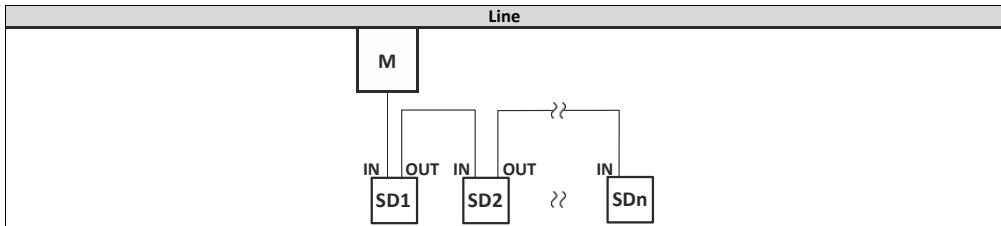

**Basic network settings**

Use the DIP switch to set the node address and baud rate and to activate the integrated bus terminating resistor.

Bus termination	Baud rate										CAN node address									
	R	d	c	b	a	64	32	16	8	4	2	1	64	32	16	8	4	2	1	
OFF	OFF	ON	OFF	ON	ON	20 kbits/s							OFF	OFF	OFF	OFF	OFF	OFF	OFF	
Inactive	OFF	OFF	ON	ON	ON	50 kbits/s							Value from parameter							
ON	OFF	OFF	ON	OFF	ON	125 kbits/s							Node address - example:							
Active	OFF	OFF	OFF	ON	ON	250 kbits/s							OFF	OFF	ON	OFF	ON	ON	ON	
	OFF	OFF	OFF	OFF	ON	Value from parameter (500 kbits/s)										Node address = 16 + 4 + 2 + 1 = 23				
	OFF	ON	OFF	OFF	OFF	1 Mbit/s														
	All other combinations										Value from parameter (500 kbits/s)									

**Bold print** = default setting

**EtherCAT**
**Typical topologies**

M Master

SD Slave Device

**Bus-related information**

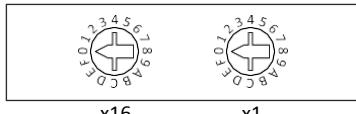

Name	EtherCAT
Communication medium	Ethernet 100 Mbps, full duplex
Use	Connection of the inverter to an EtherCAT network
Connection system	RJ45
Status display	2 LEDs
Connection designation	IN: X246 OUT: X247

**LED "RUN"**

Blinking pattern	State	Meaning
off	OFF	No supply voltage.
	Initialisation (Init)	Network not active No data transfer
███████████████	Pre-Operational (Pre-Op)	Access possible No process data transfer
███████████████	Safe-Operational (Safe-Op)	States of the safe inputs are readable.
███████████████	Operational (Op)	Data transfer in action
on		

**Basic network settings**

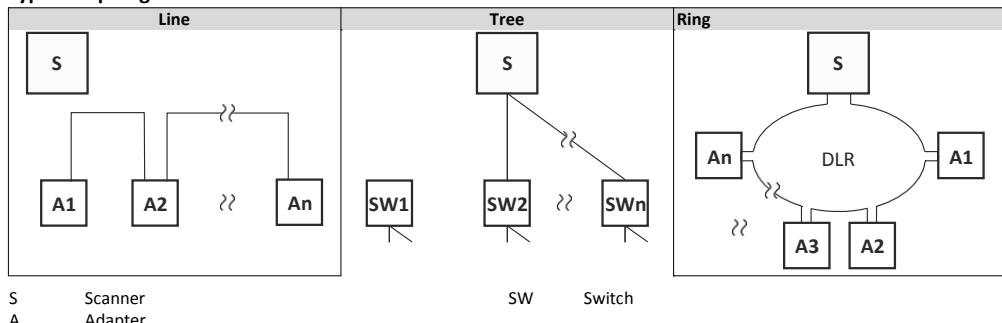

The rotary encoder switch allows you to set an EtherCAT identifier.

Setting	Identifier
0x00	Value from parameter
0x01 ... 0xFF	Switch position

## EtherNet/IP

### Typical topologies

### Bus-related information

Name	EtherNet/IP
Communication medium	Ethernet 10 Mbps, 100 Mbps, half duplex, full duplex
Use	Connection of the inverter to an EtherNet/IP network
Connection system	RJ45
Status display	2 LEDs
Connection designation	IN: X266 OUT: X267

### Status displays at the RJ45 sockets

The LEDs at the RJ45 sockets indicate the connection status to the network:

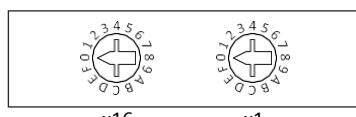

LED "Link" (green)	Status/meaning
off	No connection to the network.
on	A physical connection to the network is available.

LED "Activity" (yellow)	Status/meaning
off	No data transfer. Data is exchanged via the network.
on or flickers	

### Basic network settings

The rotary encoder switch allows you to set the last byte of the IP address.

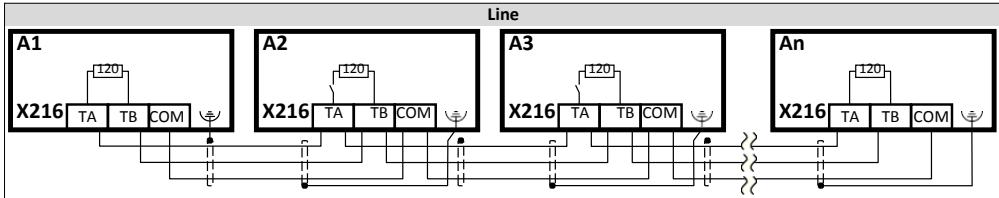

Setting	Value of last byte	Resulting IP address
0x00	Value from parameter	Value from parameter
0x01 ... 0xFE	Switch position	192.168.124.<switch position>
0xFF	Default setting	192.168.124.16

## Modbus RTU

The network must be terminated with a  $120\ \Omega$  resistor at the physically first and last node.  
Set the "R" switch to ON at these nodes.

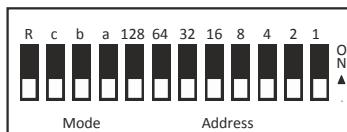

### Typical topologies

Connection description		Modbus RTU
Connection		X216
Connection type		pluggable double spring terminal
Max. cable cross-section	mm <sup>2</sup>	2.5
Max. cable cross-section	AWG	12
Stripping length	mm	10
Stripping length	inch	0.39
Tightening torque	Nm	-
Tightening torque	lb-in	-
Required tool		0.4 x 2.5

### Basic network settings

Use the DIP switch to set the node address and baud rate and to activate the integrated bus terminating resistor.

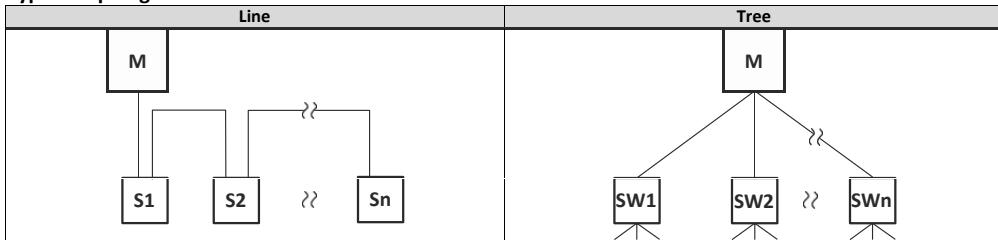

Bus termination	Baud rate	Parity	Modbus node address							
R	b	a	128	64	32	16	8	4	2	1
OFF	n. c.	OFF	OFF	OFF	OFF	OFF	OFF	OFF	OFF	OFF
Inactive		Automatic detection	Automatic detection	Value from parameter						
ON		ON	ON	Node address - example:						
Active		Value from parameter	Value from parameter	Node address = 16 + 4 + 2 + 1 = 23 Node address > 247: Value from parameter						

**Bold print** = default setting

## Modbus TCP

### Typical topologies

Bus-related information	
Name	Modbus TCP
Communication medium	Ethernet 10 Mbps, 100 Mbps, half duplex, full duplex
Use	Connection of the inverter to a Modbus TCP network
Connection system	RJ45
Status display	2 LEDs
Connection designation	Port 1: X276 Port 2: X277

### Status displays at the RJ45 sockets

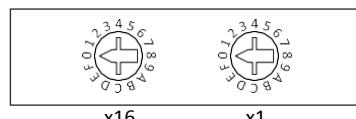

The LEDs at the RJ45 sockets indicate the connection status to the network:

LED "Link" (green)	Status/meaning
off	No connection to the network.
on	A physical connection to the network is available.

LED "Activity" (yellow)	Status/meaning
off	No data transfer. Data is exchanged via the network.
on or flickers	

### Basic network settings

The rotary encoder switch allows you to set the last byte of the IP address.

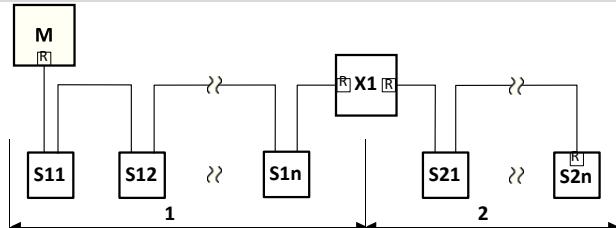

Setting	Value of last byte	Resulting IP address
0x00	Value from parameter	Value from parameter
0x01 ... 0xFE	Switch position	192.168.124.<switch position>
0xFF	Default setting	192.168.124.16

The network must be terminated with a resistor at the physically first and last node.  
Activate the bus terminating resistor at these nodes in the bus connection plug.

### Typical topologies

Line with repeater

M Master  
S Slave

X Repeater  
R Activated bus terminating resistor

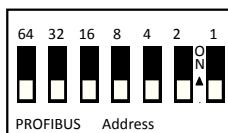

### Sub D socket 9-pin - X226

View	Pin	Assignment	Description
	1	Shield	Additional shield connection
	2	n.c.	
	3	RxD/TxD-P	Data line-B (received data/transmitted data +)
	4	RTS	Request To Send (received data/transmitted data, no differential signal)
	5	M5V2	Reference potential (bus terminating resistor -)
	6	P5V2	5 V DC / 30 mA (bus terminating resistor +, OLM, OLP)
	7	n.c.	
	8	RxD/TxD-N	Data line-A (received data/transmitted data -)
	9	n.c.	

### Basic network settings

Use the DIP switch to set the station address.

The baud rate is detected automatically.

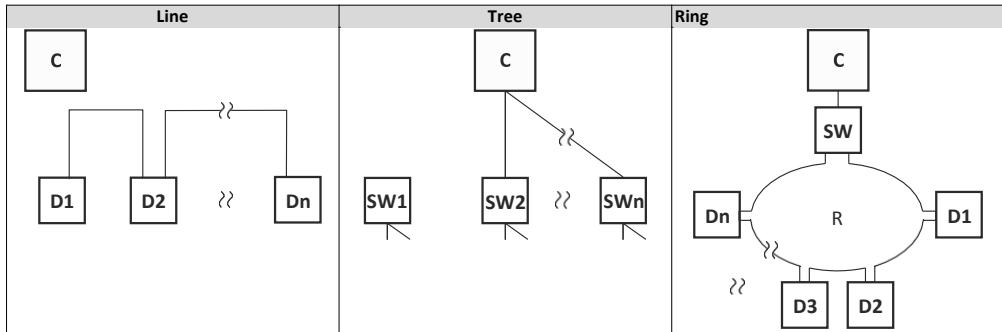

PROFIBUS station address							
64	32	16	8	4	2	1	Value from parameter
OFF	OFF	OFF	OFF	OFF	ON	ON	
Station address - example:							
OFF   OFF   ON   OFF   ON   ON   ON   ON							
Station address = 16 + 4 + 2 + 1 = 23							
Do not set station address = 126 and station address = 127. These station addresses are invalid.							

**Bold print** = default setting

### PROFINET

#### Typical topologies

C IO controller  
D IO device

SW Switch SCALANCE (MRP capable)  
R Redundant domain

#### Bus-related information

Name	PROFINET RT
Communication medium	Ethernet 100 Mbps, full duplex
Use	Connection as PROFINET IO Device
Connection system	RJ45
Status display	2 LEDs
Connection designation	X256 X257

#### Status displays at the RJ45 sockets

The LEDs at the RJ45 sockets indicate the connection status to the network:

LED "Link" (green)	Status/meaning
off	No connection to the network.
	A physical connection to the network is available.
on	
LED "Activity" (yellow)	Status/meaning
off	No data transfer.
	Data is exchanged via the network.
on or flickers	

#### LED "BUS RDY" (green)

Blinking	State	Meaning
Off	Not connected	No connection to the IO-Controller
	Connected	IO-Controller in STOP
On	Data exchange	IO-Controller in RUN (DATA_EXCHANGE)

**LED "BUS ERR" (red)**

Blinking	State	Meaning
Off	No fault	No fault
flickers	IO-Device identifies (localises)	The PROFINET function "node flashing test" is triggered by IO-Controller. The flickering LED serves to identify (locate) an accessible IO-Device.
	Impermissible settings	Impermissible settings: Stack, station name or IP parameters are invalid.
On	Fault	Communication error (e. g. Ethernet cable removed)

The rotary encoder switch has no function.

## DANGER !

Improper installation of the safety engineering system can cause an uncontrolled starting action of the drives.

Possible consequence: Death or severe injuries

- ▶ Safety engineering systems may only be installed and commissioned by qualified personnel.
- ▶ All control components (switch, relay, PLC, ...) must comply with the requirements of EN ISO 13849-1 and the EN ISO 13849-2.
- ▶ Switches, relays with at least IP54 enclosure.
- ▶ Control cabinet with at least IP54 enclosure.
- ▶ The wiring must be shielded.
- ▶ It is essential to use insulated wire end ferrules for wiring.
- ▶ All safety-relevant cables outside the control cabinet must be protected, e.g. by means of a cable duct.
- ▶ Ensure that no short circuits can occur according to the specifications of the EN ISO 13849-2.
- ▶ All further requirements and measures can be obtained from the EN ISO 13849-1 and the EN ISO 13849-2.
- ▶ If an external force acts upon the drive axes, additional brakes are required. Please observe that hanging loads are subject to the force of gravity!
- ▶ For safety-related braking functions, use safety-rated brakes only.
- ▶ The user has to ensure that the inverter will only be used in its intended application within the specified environmental conditions. This is the only way to comply with the declared safety-related characteristics.

## DANGER !

Automatic restart if the request of the safety function is deactivated.

Possible consequences: Death or severe injuries

- ▶ You must provide external measures according to EN ISO 13849-1 which ensure that the drive only restarts after a confirmation.

## NOTICE

Excessively high humidity or condensation

Malfunction or destruction of the safety component

- ▶ Only commission the safety component when it has acclimatised.

## NOTICE

Overvoltage

Destruction of the safety component

- ▶ Make sure that the maximum voltage (maximum rated) at the supply terminals X5 and X82 30 V DC does not exceed 30 V DC.

## DANGER !

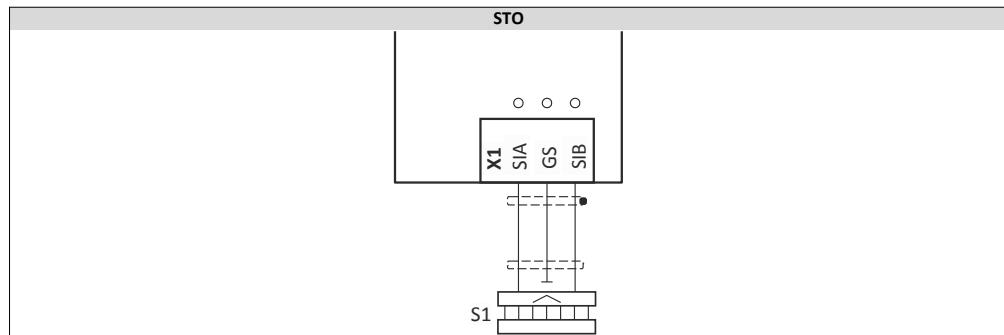

With the "Safe torque off" (STO) function, no "emergency-stop" can be executed according to EN 60204-1 without additional measures. There is no electrical isolation between the motor and inverter and no service switch or maintenance switch!

Possible consequences: Death or severe injuries

► "Emergency stop" requires electrical isolation, e. g. via a central mains contactor.

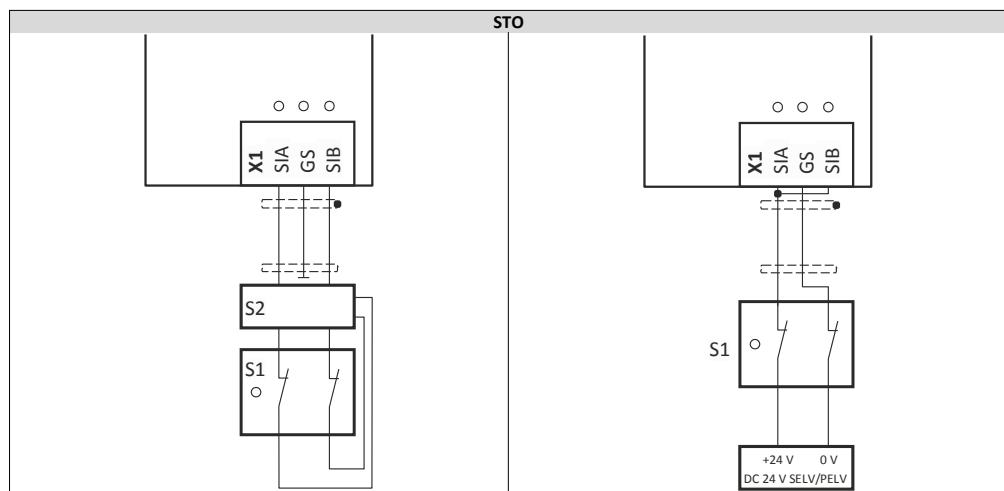

### Connection diagram

#### Active sensors

S1 Active sensor - example of lightgrid

#### Passive sensors

S2 Safety switching device

S1 Passive sensor

**Terminal data**

X1	Specification	Unit	min.	typ.	max.
SIA, SIB	LOW signal	V	-3	0	+5
	HIGH signal	V	+15	+24	+30
	Running time	ms		3	
	Clear time	ms		50	60
	Input current SIA	mA		10	14
	Input current SIB	mA		7	12
	Input peak current	mA		100	
	Test pulse duration	ms			1
	Test pulse interval	ms	10		
GS	Reference potential for SIA and SIB				

Connection description		Basic Safety - STO
Connection		X1
Connection type		pluggable double spring terminal
Max. cable cross-section	mm <sup>2</sup>	1.5
Max. cable cross-section	AWG	16
Stripping length	mm	9
Stripping length	inch	0.35
Tightening torque	Nm	-
Tightening torque	lb-in	-
Required tool		0.4 x 2.5

## Commissioning

The purpose of commissioning is to adapt the inverter as part of a machine with a variable-speed drive system to its drive task.

### Important notes

### DANGER !

Incorrect wiring can cause unexpected states during the commissioning phase.

Possible consequences: death, severe injuries or damage to property

Ensure the following before switching on the mains voltage:

- ▶ Wiring must be complete and correct.
- ▶ Wiring must be free of short circuits and earth faults.
- ▶ The motor circuit configuration (star/delta) must be adapted to the inverter output voltage.
- ▶ The motor must be connected in-phase (direction of rotation).
- ▶ The "emergency off" function of the overall system must operate correctly.

## Initial switch-on and functional test

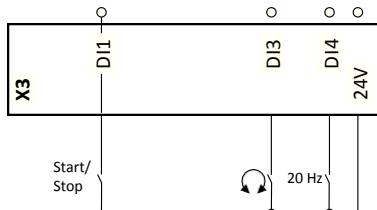

Target: achieve rotation of the motor connected to the inverter as quickly as possible.

Requirements:

- The connected motor matches the inverter in terms of power.
- The parameter settings comply with the delivery status (Santerno setting).

### 1. Preparation

- Wire power terminals.
- Wire digital inputs X3/DI1 (start/stop), X3/DI3 (reversal) and X3/DI4 (frequency preset 20 Hz).
- Do not connect terminal X3/AI1 (analog setpoint selection) or connect it to GND.

### 2. Switch on mains and check readiness for operation

- Switch on mains voltage.
- Observe LED status displays "RDY" and "ERR" on the front of the inverter:
  - If the blue "RDY" LED is blinking and the red "ERR" LED is off, the inverter is ready for operation. The controller is inhibited.  
You can now start the drive.
  - If the red "ERR" LED is lit permanently, a fault is pending.  
Eliminate the fault before you carry on with the functional test.

### LED status displays

"RDY" LED (blue)	"ERR" LED (red)	Status/meaning	
off	off	No supply voltage.	
blinking (1 Hz)	off	Safe torque off (STO) active.	
	blinking fast (4 Hz)	Safe torque off (STO) active. Warning active.	
blinking (2 Hz)	off	Inverter inhibited.	
	lit every 1.5 s for a short time	Inverter inhibited, no DC-bus voltage.	
	blinking fast (4 Hz)	Inverter inhibited, warning active.	
	on	Inverter inhibited, fault active.	
on	off	Inverter enabled.	The motor rotates according to the setpoint specified or quick stop active.
	blinking fast (4 Hz)	Inverter enabled, warning active.	
	blinking (1 Hz)	Inverter enabled, quick stop as response to a fault active.	

### Carry out a functional test

#### 1. Start drive

- Start inverter: X3/DI1 = HIGH.
- If the inverter is equipped with an integrated safety system: X1/SIA = HIGH and X1/SIB = HIGH.
- Activate frequency preset 1 (20 Hz) as speed setpoint: X3/DI4 = HIGH.

The drive rotates with 20 Hz.

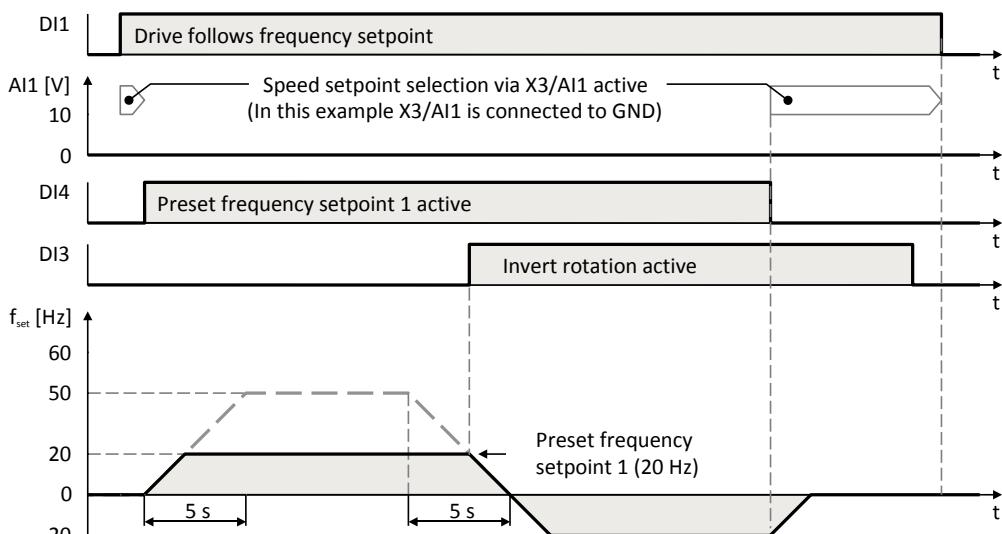

- Optional: Activate reversal.

a) X3/DI3 = HIGH.

The drive rotates with 20 Hz in the opposite direction.

b) Now deactivate reversal: X3/DI3 = LOW.

Speed characteristic (example)

#### 2. Stop drive

- Now deactivate frequency preset 1: X3/DI4 = LOW.
- Now stop inverter: X3/DI1 = LOW.

The functional test is completed.

## Technical data

### Standards and operating conditions

### Conformities/approvals

Conformity

### 3-phase mains connection 400 V "Light Duty"

#### Rated data

The output currents apply to these operating conditions:

- At a switching frequency of 2 kHz or 4 kHz: Ambient temperature above 40 °C with a rated output current reduced by 2.5 %/°C.
- If the load characteristic "Light Duty" and the switching frequencies 8 kHz or 16 kHz are selected, only the values of the load characteristic "Heavy Duty" are reached.

### Rated data

3-phase mains connection 480 V "Light Duty"

### Rated data

The output currents apply to these operating conditions:

- At a switching frequency of 2 kHz or 4 kHz: Ambient temperature above 40 °C with a rated output current reduced by 2.5 %/°C.
- If the load characteristic "Light Duty" and the switching frequencies 8 kHz or 16 kHz are selected, only the values of the load characteristic "Heavy Duty" are reached.
