

MCE-C

FOR CIRCULATION  
SYSTEMS

MCE-P

FOR PRESSURIZATION  
SYSTEMS**TECHNICAL DATA****Rotation speed:** 1450 - 2900 1/min.**Operating range:**from 1 to 470 m<sup>3</sup>/h with head up to 63 metres.**Liquid temperature range:**

from -10 °C to +140 °C (MCE/C)

from -10 °C to +80 °C (MCE/P)

**Pumped liquid:** clean, free of solids and abrasives, non-viscous, non-aggressive, non-crystallised and chemically neutral, with properties similar to water.**Maximum ambient temperature:** +40 °C.**Maximum operating pressure:**

16 bar - 1600 kPa (for DN 200 max 10 bar).

**Protection class:** IP 55.**Insulation class:** F.**Flanging:** PN 16 DIN 2533.

PN 10 DIN 2532 for DN 200.

**Installation:** normally in the horizontal position.**APPLICATIONS**

Standardised centrifugal electronic pumps on base with elastic coupling, designed for a wide range of applications, such as:

**MCE/C:** Circulation of the hot water of the heating system, of the cold water of the air conditioning and refrigeration systems.**MCE/P:** Pressure increase, supply of drinking water and sprinkler and watering systems.**CONSTRUCTION FEATURES OF THE PUMP**

Cast iron single stage spiral body complying with DIN-EN 733 (formerly DIN 24255), seal holder cover and cast iron motor support, flanges complying with DIN 2533 (DIN 2532 for DN 200). Cast iron impeller, closed and dynamically balanced, with compensation of the axial thrust through balancing holes, operation on interchangeable wear rings (on request). Stainless steel pump shaft supported by two permanently lubricated oversized ball bearings, housed inside an appropriate chamber in the support.

Standard seal device: standardised mechanical seal according to DIN 24960 in carbon/silicon carbide with EPDM OR rings. Packing with lubricating hydraulic ring and stuffing box in two easily removable parts available on request.

**CONSTRUCTION FEATURES OF THE MOTOR**

Closed asynchronous type, external ventilation cooling, 2 or 4 poles. Rotor running on ball bearings, largely oversized to ensure low noise and durability. Controlled by MCE inverter.

**Construction:** B3**Standard single-phase voltage:** 1x220-240 V / 50-60 Hz**Special version on request:** three-phase 3x400 V / 50 Hz or three-phase 3x460 V / 60 Hz**Standard three-phase voltage:** 3x400 V / 50 Hz**Special version on request:** 3x460 V / 60 Hz

## MCE/C INVERTER

### CONSTRUCTION FEATURES OF THE ELECTRONICS: MCE/C INVERTER

MCE/C inverters have been designed for managing circulation pumps. By allowing a simple adjustment of the differential pressure, they give the possibility of adjusting the performance of the circulation pump to the actual system requirements. They are fitted on the fan cover of the motor. This makes the installation of the pump with MCE/C particularly easy and quick. The protection class of the MCE/C is IP55. The easy of programming is guaranteed by the use of a simple and intuitive interface, similar to Dialogue electronic circulators, and a graphic display. MCE/C inverters have a double micro-processor construction that guarantees maximum efficiency and reliability.

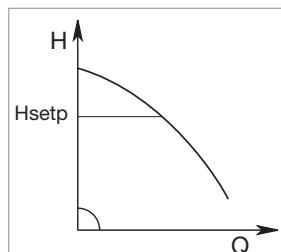

MCE/C inverters protect the motor and the pump, and increase their life, by eliminating hammering effects and making the pump rotate at the minimum number of rotations capable of meeting the requirements of the user. In addition, electric pumps controlled by the MCE/C inverter are environmentally friendly. In fact, by ensuring that the pump only uses the power that is strictly necessary for meeting the needs of the users, electricity consumption is strongly reduced when compared with fixed speed pumps. It is possible to create twin units by using the appropriate cable for the connection of MCE/C inverters.

### MODES OF OPERATION

All the functions listed below can be consulted by the users (including less experienced ones) by simply scrolling through the MCE/C menu. The calibration and the modification of the parameters are protected, and can only be completed by expert users.

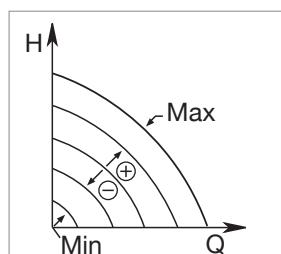

#### 1 - $\Delta P_c$ constant differential pressure adjustment mode

The  $\Delta P_c$  adjustment mode keeps the differential pressure of the system constantly at the H (setp) value set, even in case of variation of the flow rate. This is the standard adjustment used. It can be set directly from the MCE/C control panel. The inverter keeps the differential pressure (H setp) constant even in case of flow variation.

This adjustment is particularly indicated for the following systems:

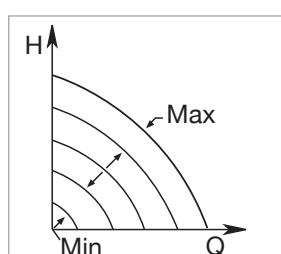

- a. two-pipe heating systems with thermostat valves
- b. underfloor heating systems with thermostat valves
- c. single-pipe heating systems with thermostat valves and calibration valves
- d. systems with primary circuit pumps

#### 2 - Constant curve adjustment modes

##### 2.1 - Constant curve adjustment

The rotation speed is kept at a constant number of revolutions. This rotation speed can be set between a minimum value and the nominal frequency of the circulation pump (e.g. between 15 Hz and 50 Hz). This mode can be set using the control panel on the MCE cover.

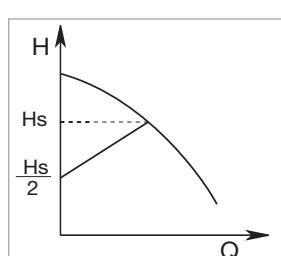

##### 2.2 - Adjustment of the constant curve with external analogue signal

The rotation speed is kept at a constant number of revolution in proportion with the voltage of the external analogue signal.

The rotation speed changes in a linear way, between the nominal frequency of the pump when  $V_{in} = 10$  V, and the minimum frequency when  $V_{in} = 0$  V.

This mode can be set using the control panel on the MCE cover.

#### 3 - $\Delta P_v *$ proportional differential pressure adjustment mode

With  $\Delta P_v$  adjustment mode, with the variation of the flow rate, the value of the delivery of the head also varies in a linear manner, from  $H_{setp}$  to  $H_{setp}/2$ .

MCE-P

## MCE/P INVERTER

### CONSTRUCTION FEATURES OF THE ELECTRONICS: MCE/P INVERTER

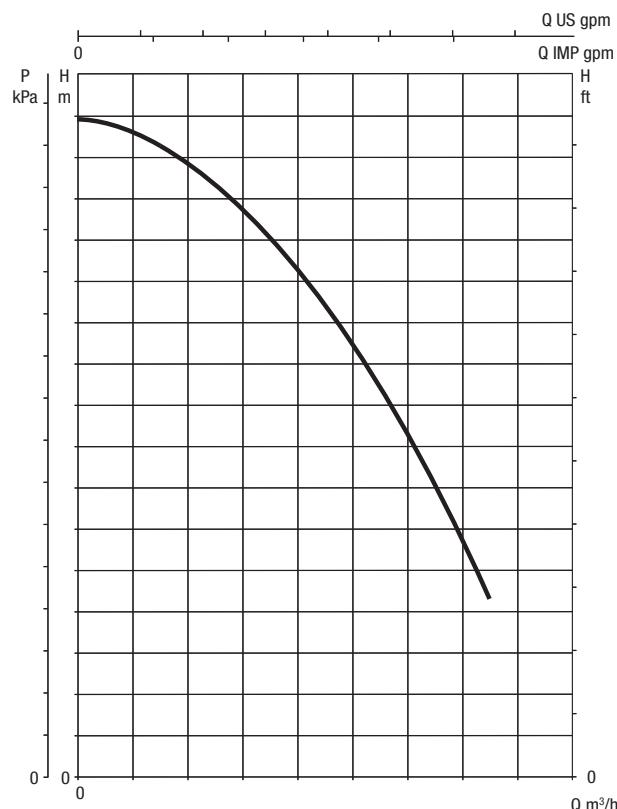

The inverter continuously adjusts the rotation speed of the electric pump, keeping the pressure constant, even when the flow rate varies. The other electric pumps, also with variable speed, are activated in cascade after the first one has reached maximum speed. Through modulation, they compensate the pressure fluctuations of the system.

For every operating cycle, it is possible to switch the restart to a different pump, therefore ensuring even use of all electric pumps.

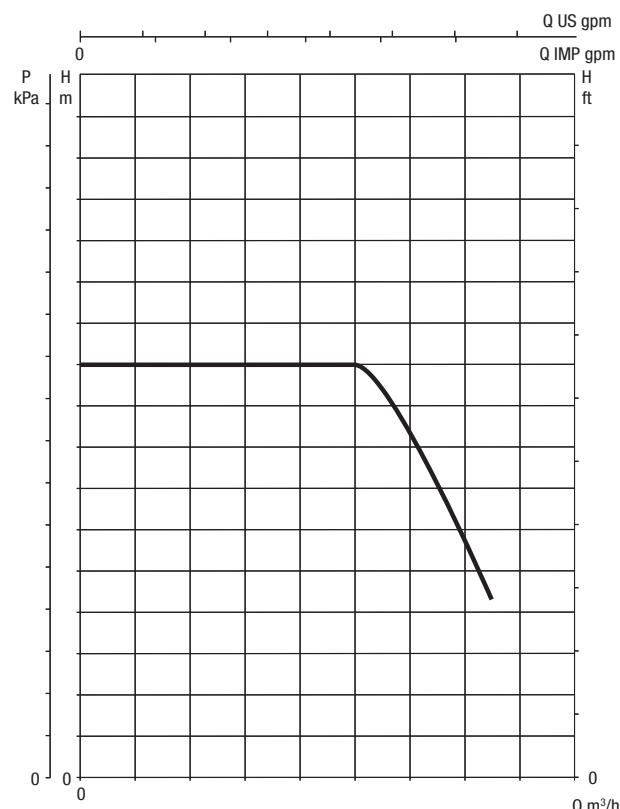

It is possible to set operation times for each individual pump, switching to another pump after such set times.

The "SP" pressure can be adjusted by the user using the "+" and "-" keys found on the MCE/P (as a rule, all the pumps are set to the same pressure value). With the new MCE/P, it is sufficient to set the data on one of the devices, and it will be automatically propagated to the other pumps of the system.

## MODES OF OPERATION

PERFORMANCE CURVES WITHOUT INVERTER

PERFORMANCE CURVES WITH INVERTER

The inverter is capable of maintaining a constant pressure even when the flow rate varies.

The operating pressure can be adjusted by the user.

A good pressure set-point is between 1/3 and 2/3 of the maximum head of the electric pump. In this way, high efficient of the pump is maintained, together with maximum saving.

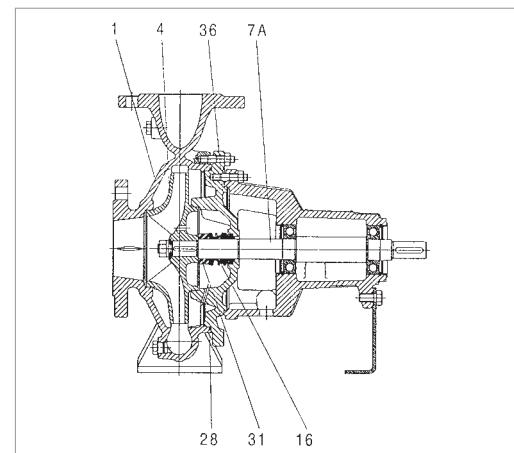

In addition, the MCE/P does not block the pump if the pressure is not reached, but the flow is present. This prevents service interruptions in case of high flows.

**For more information refer to the technical appendix.**

MCE-C

MCE-P

Pumped liquid temperature range: from -10 °C to +140 °C (MCE/C) - from -10 °C to +80 °C (MCE/P) - Maximum ambient temperature: +40 °C  
= 2900 1/min

See hydraulic efficiency details on page 241.

The performance curves are based on kinematic viscosity values = 1 mm²/s and density equal to 1000 kg/m³. Curve tolerance according to ISO 9906.
