

# Fixed Displacement Vane Pump

## HV and HVQ Series

FAMCO هایپرصنعت HOF

### Features

- HV / HVQ Series are fixed displacement and balanced type vane pumps. Available in both 12 vanes design for industrial application with quiet operating and 10 vanes design for mobile application with higher pressure and wider range of speed.
- The vane design with self compensation for wear and clearances makes volumetric efficiency of pump nearly constant over the service life. (the vane always adjust its orbit to contact with the cam ring, even though wear occurs between the cam ring and vane tip)
- With a balanced intra-vane design, outlet pressure is continuously applied only to the area between the vane and insert. This area is small and thrust is correspondingly light. Top and bottom areas of the vane are subject to either inlet or outlet pressure, depending on the vane's location during rotor rotation. The valving of pressure to and from the bottom area of the vane is through holes drilled in the rotor. This varying pressure under the vane reduces wear and increases pump efficiency.
- The vane pump is not damaged at low speed and high pressure operation because pumping action does not start until the speed is high enough for the vane to throw out.
- The inlet or outlet ports can be rotated through increments

of 90° in relation to each other, providing application flexibility and easy installation.

- With the cartridge independent of the shaft, allowing for easy change of flow capacity and field servicing without removing the pump from its mounting.
- For the cartridge kit of HVQ Series, the flexible plates are inserted between the support plates and the rotor. The flexible plates are assembled with the bronze facing towards the rotor to improve cold start capability and compensate thermal expansion in the rotor. This makes HVQ Series particularly suited for mobile application.

### Handling

- For maximum service life, the pump should be protected from contamination. Filtering fluid before filling and during operation to maintain or exceed ISO cleanliness code 16/13. Appropriately size suction filter, with cold start bypass, of 149 micron absolute (100 mesh) and 10 micron absolute return line filter is recommended. Replaceable elements should be changed as filter supplier instructions
- The drive shaft must align with the power source shaft. Avoiding shaft end thrust and applications that impose radial loading.
- The start-up procedures should be as follows:
  - Check the rotation of power source to match with rotation

of pump.

- Check inlet and outlet ports to assure all connections are properly installed and check all mounting bolts and flanges to assure all are tight and properly aligned.
- Fill pump with fluid through the outlet port if the pump is mounted above the fluid level. The spline shaft models also need to be lubricate with an anti-fretting grease or similar lubricant.
- Place all controls in the neutral position so the pump is unloaded during initial start-up.
- Prime the pump within a few second when the pump is started.
- Bleed off entrapped air from outlet circuit until a steady output flow is observed.

The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change at any time without notice.

## Installation Dimensions mm (inch)

## Double Pump

### 4525HV/HVQ for shaft, see 45HV/HVQ

### 4535HV/HVQ for shaft, see 45HV/HVQ

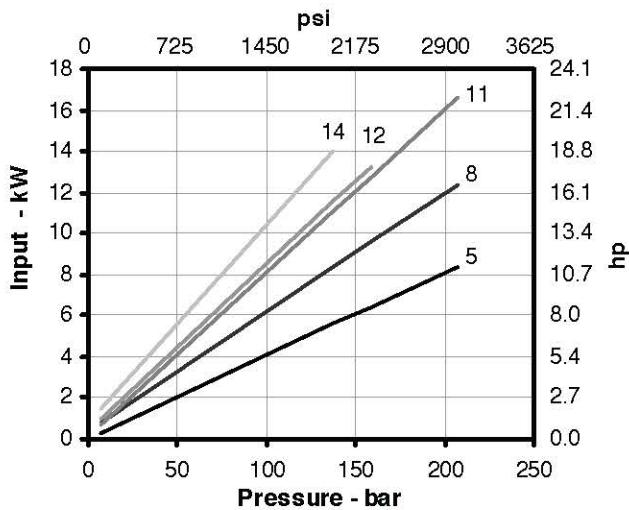

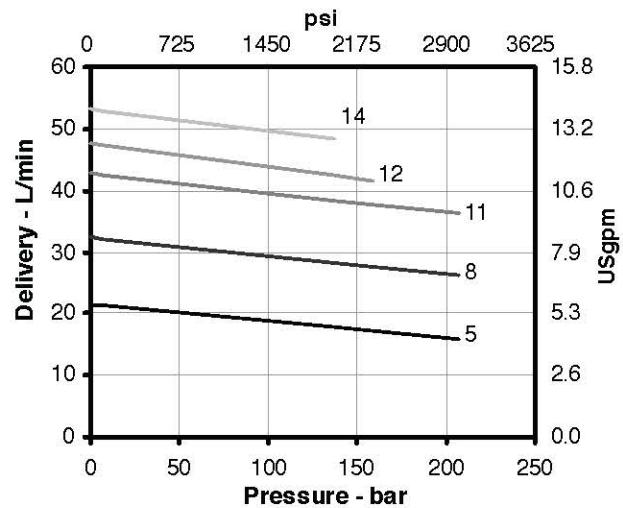

## Performance Characteristics

20HV, Cover End of 20HV

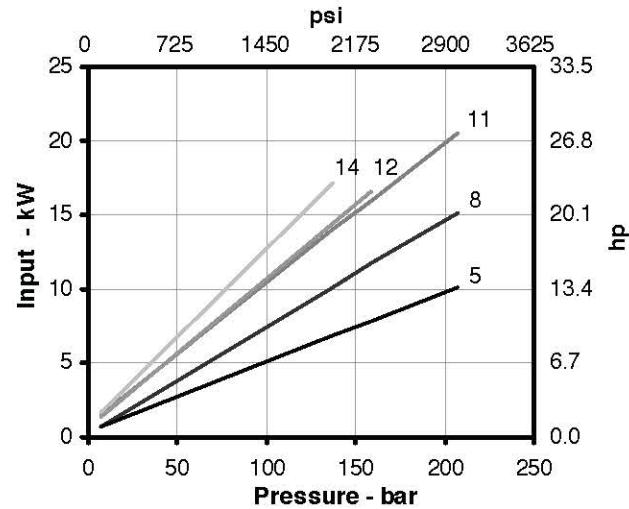

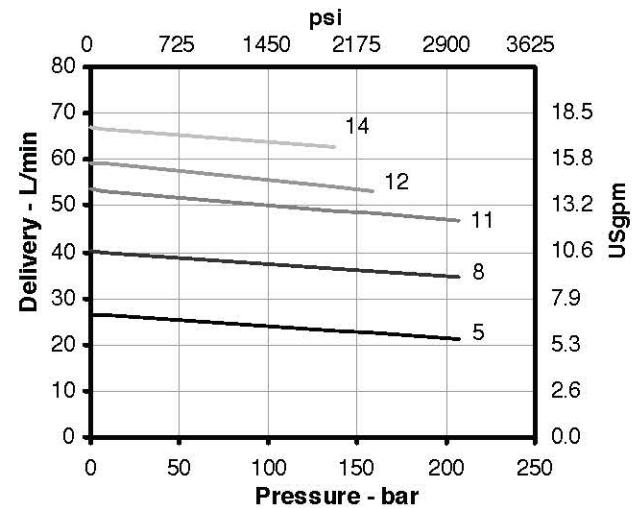

Based on SAE 10W Fluid at 50 °C (120 °F) and Pump inlet at 0 PSIG (14.7 PSIA)

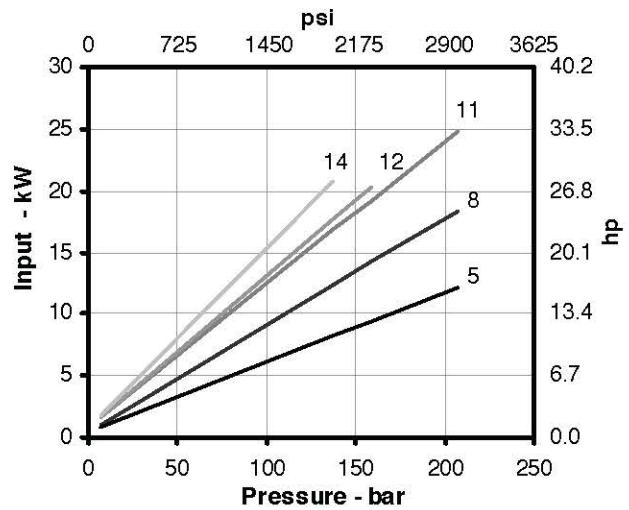

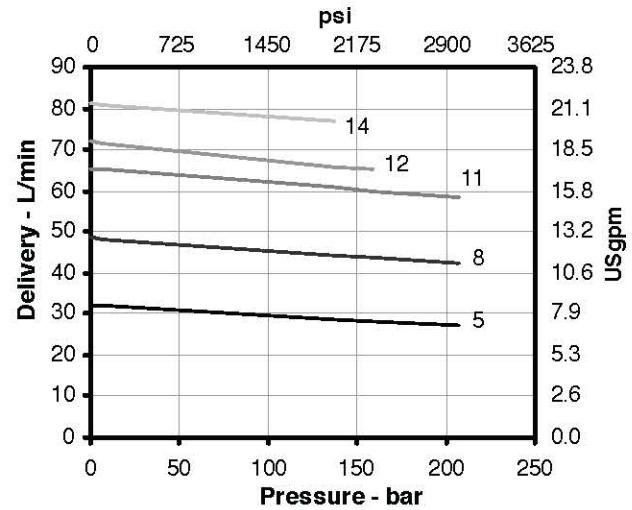

At 1200 rpm

At 1500 rpm

At 1800 rpm

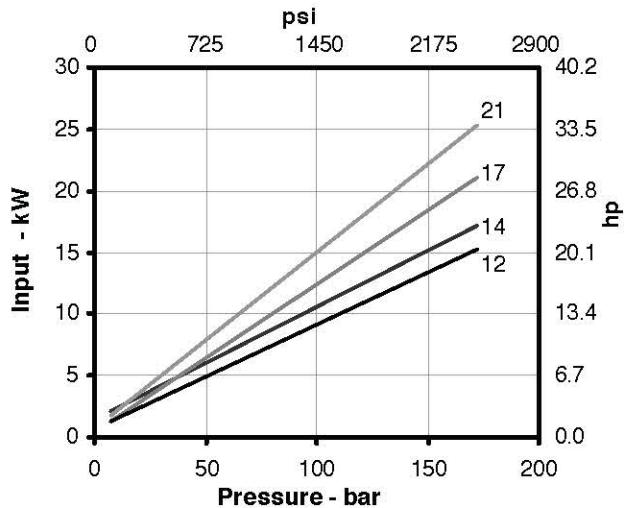

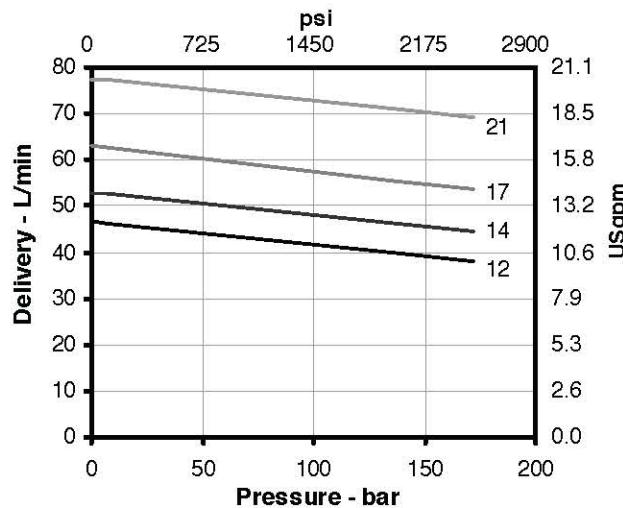

## Performance Characteristics

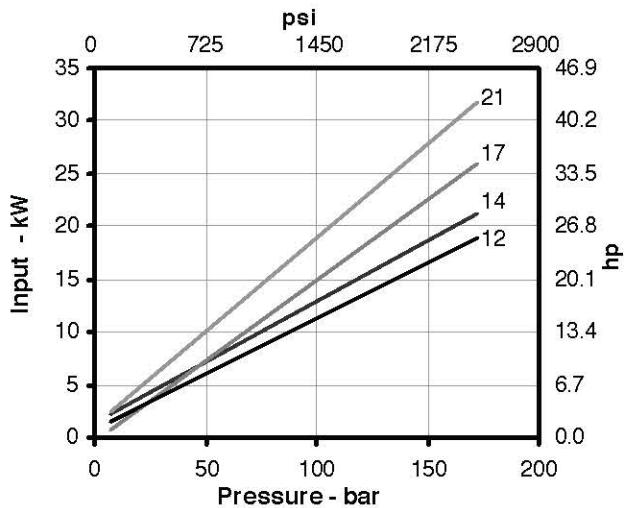

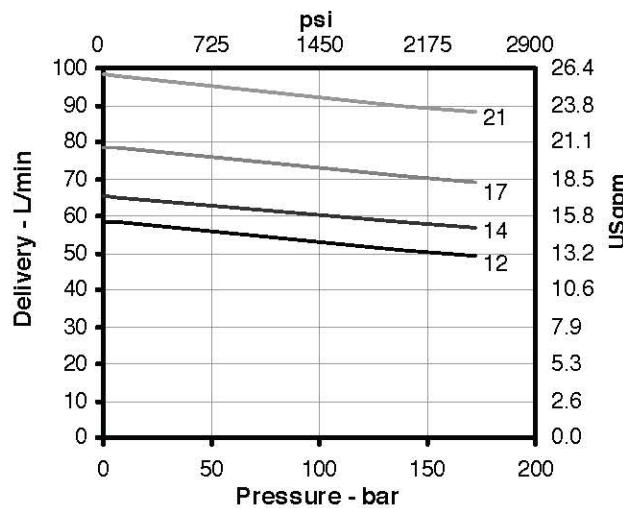

## 25HV, Shaft End of 25\*\*HV, Cover End of \*\*25HV

Based on SAE 10W Fluid at 50 °C (120 °F) and Pump inlet at 0 PSIG (14.7 PSIA)

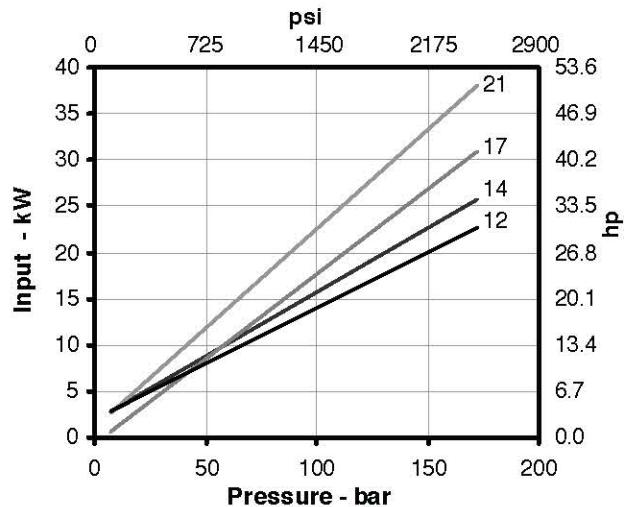

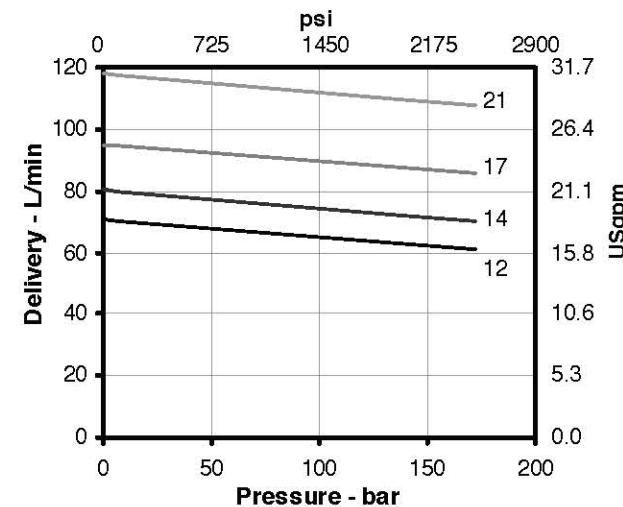

At 1200 rpm

At 1500 rpm

At 1800 rpm

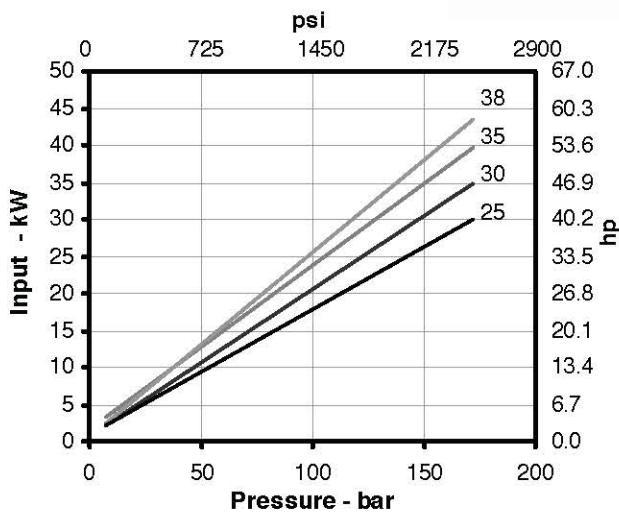

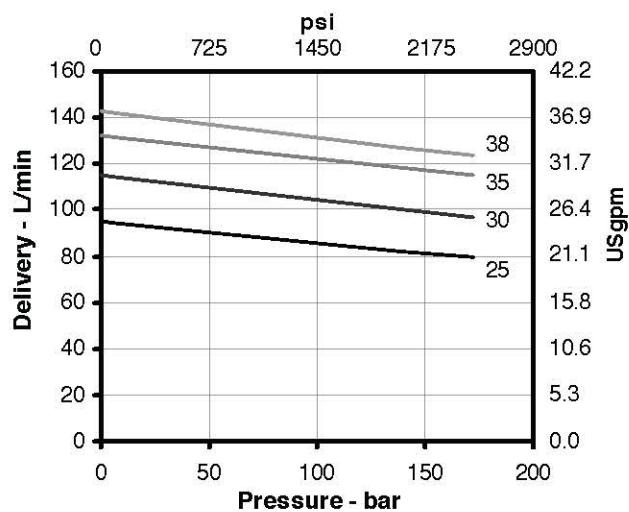

## Performance Characteristics

35HV, Shaft End of 35\*\*HV, Cover End of \*\*35HV

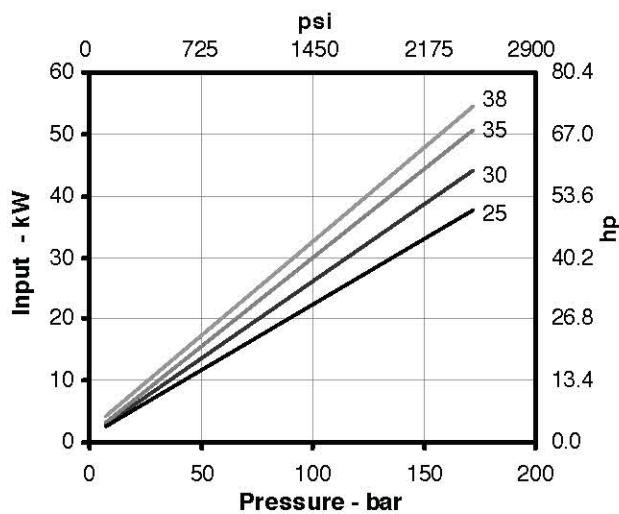

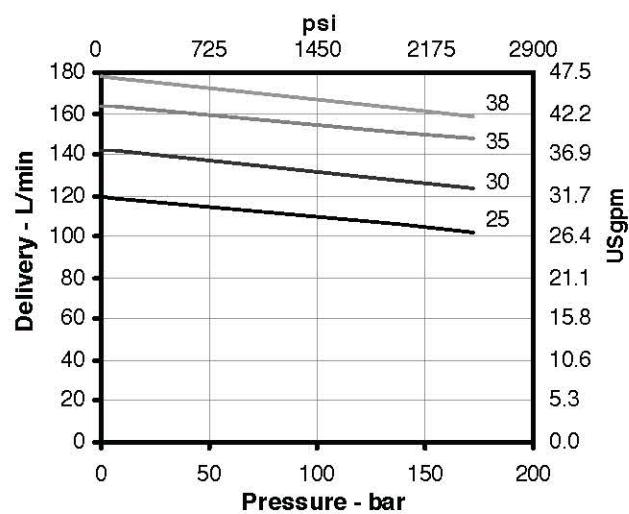

Based on SAE 10W Fluid at 50 °C (120 °F) and Pump inlet at 0 PSIG (14.7 PSIA)

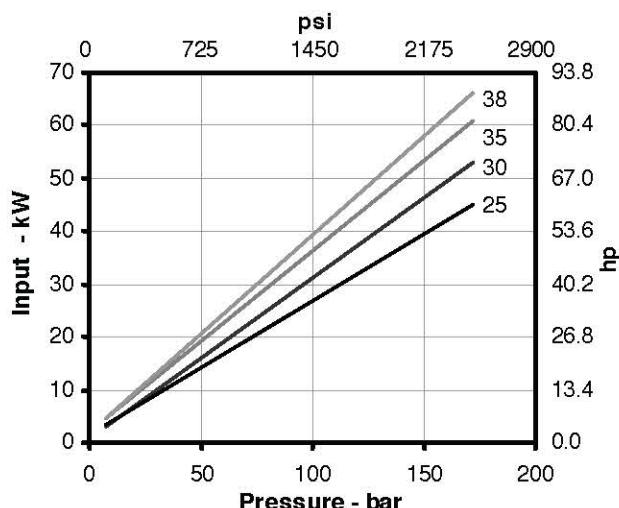

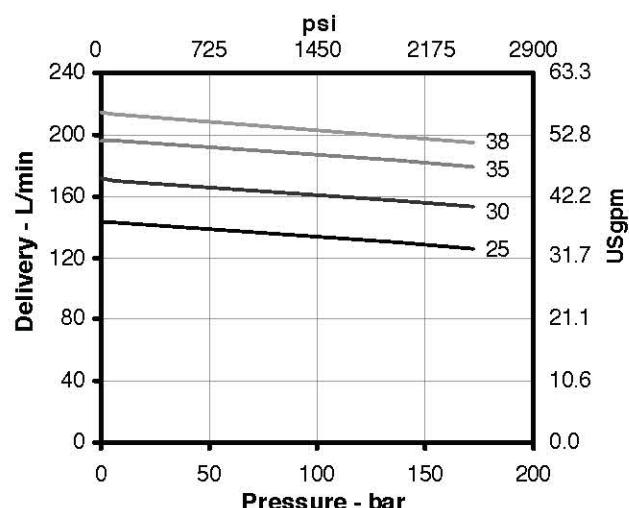

At 1200 rpm

At 1500 rpm

At 1800 rpm

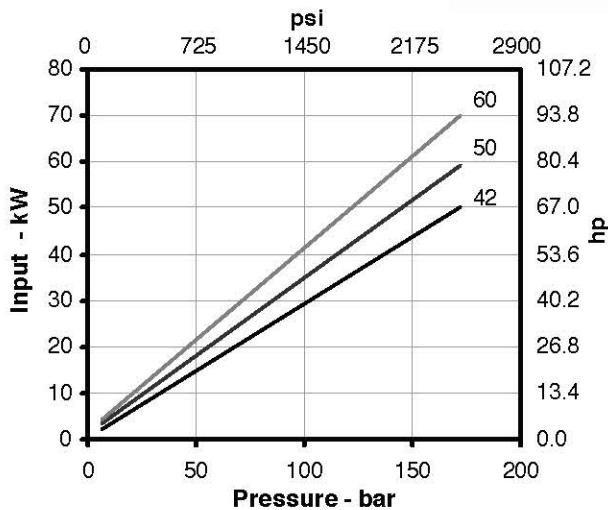

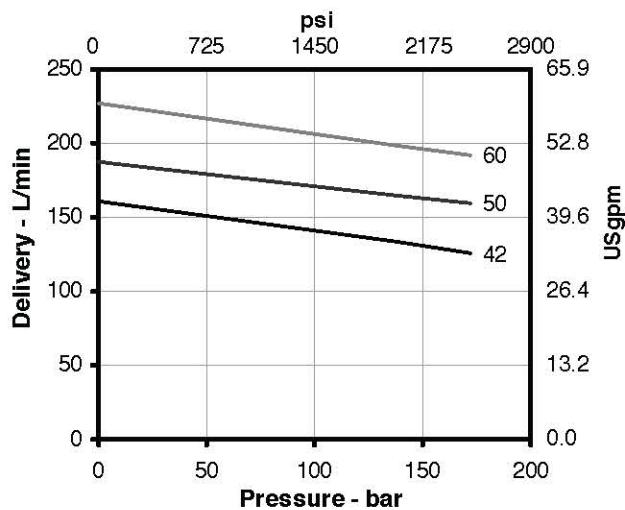

## Performance Characteristics

45HV, Shaft End of 45\*\*HV

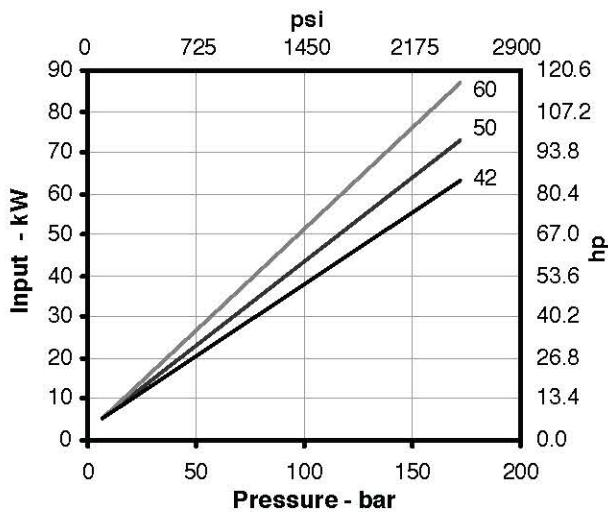

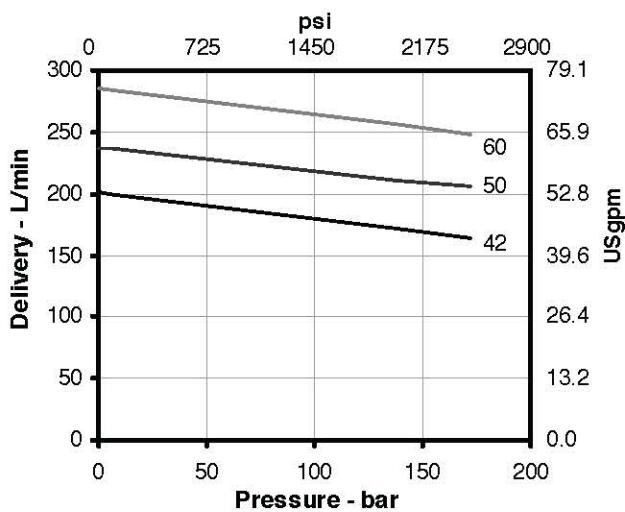

Based on SAE 10W Fluid at 50 °C (120 °F) and Pump inlet at 0 PSIG (14.7 PSIA)

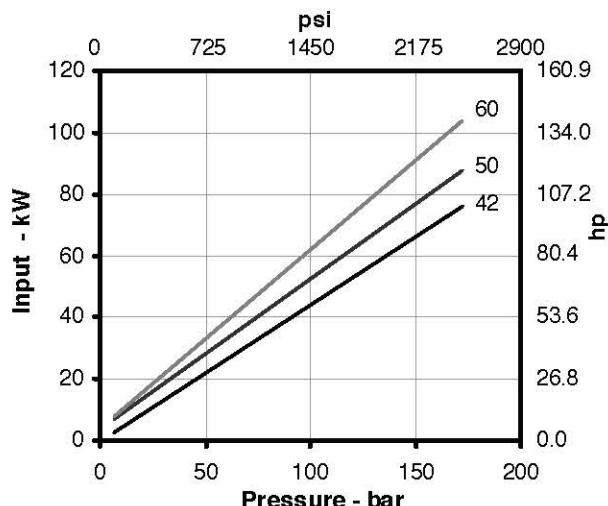

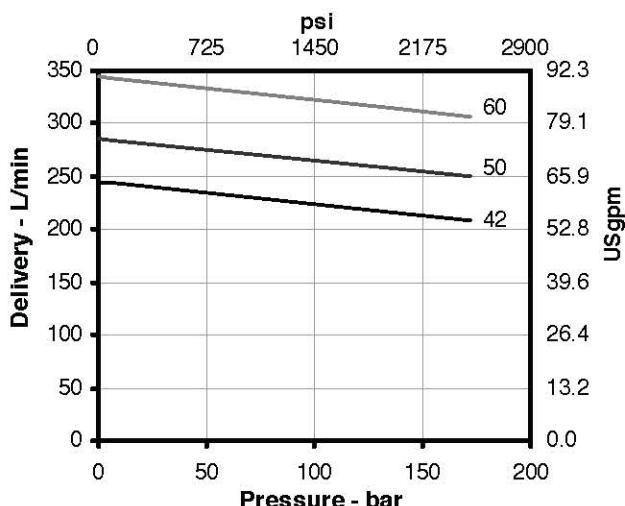

At 1200 rpm

At 1500 rpm

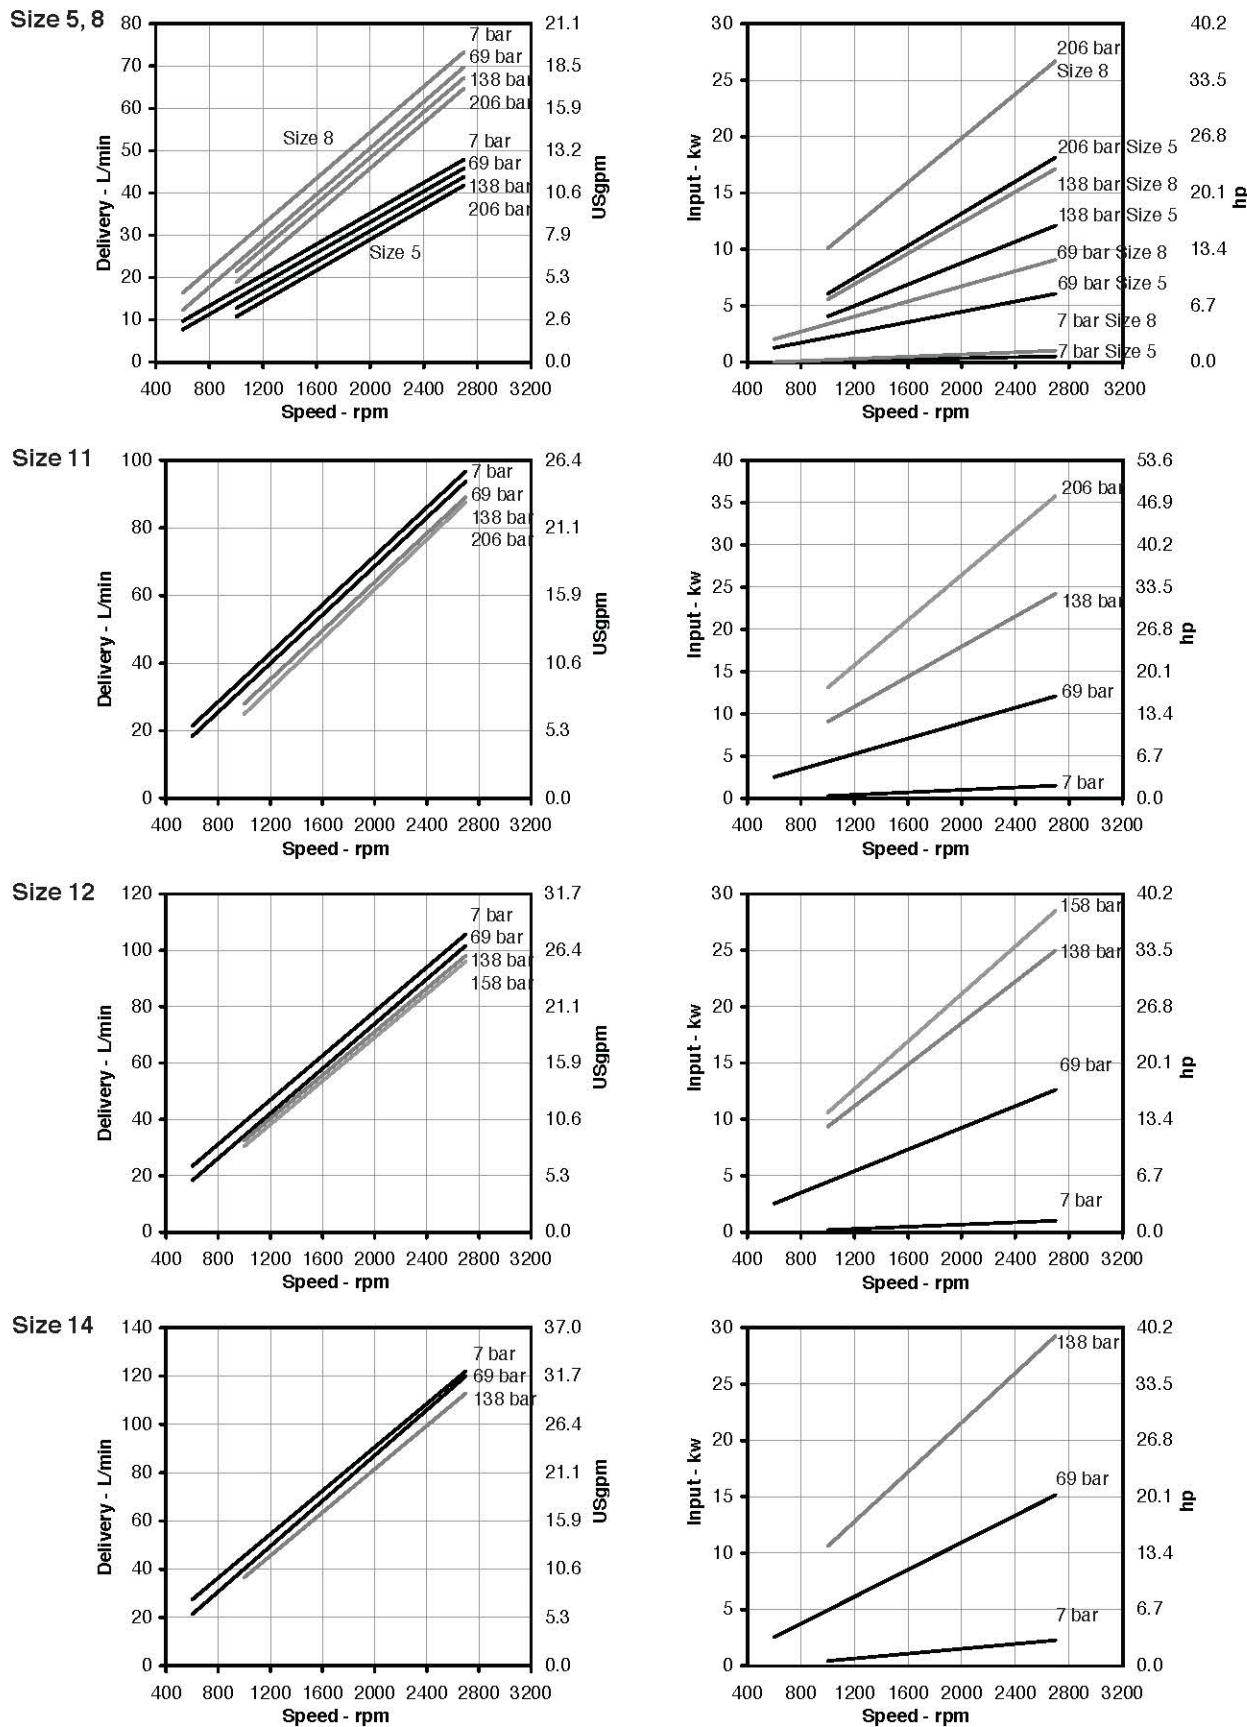

At 1800 rpm

## Performance Characteristics

20HVQ, Cover End of 20HVQ

Based on SAE 10W Fluid at 82 °C (180 °F) and Pump inlet at 0 PSIG (14.7 PSIA)

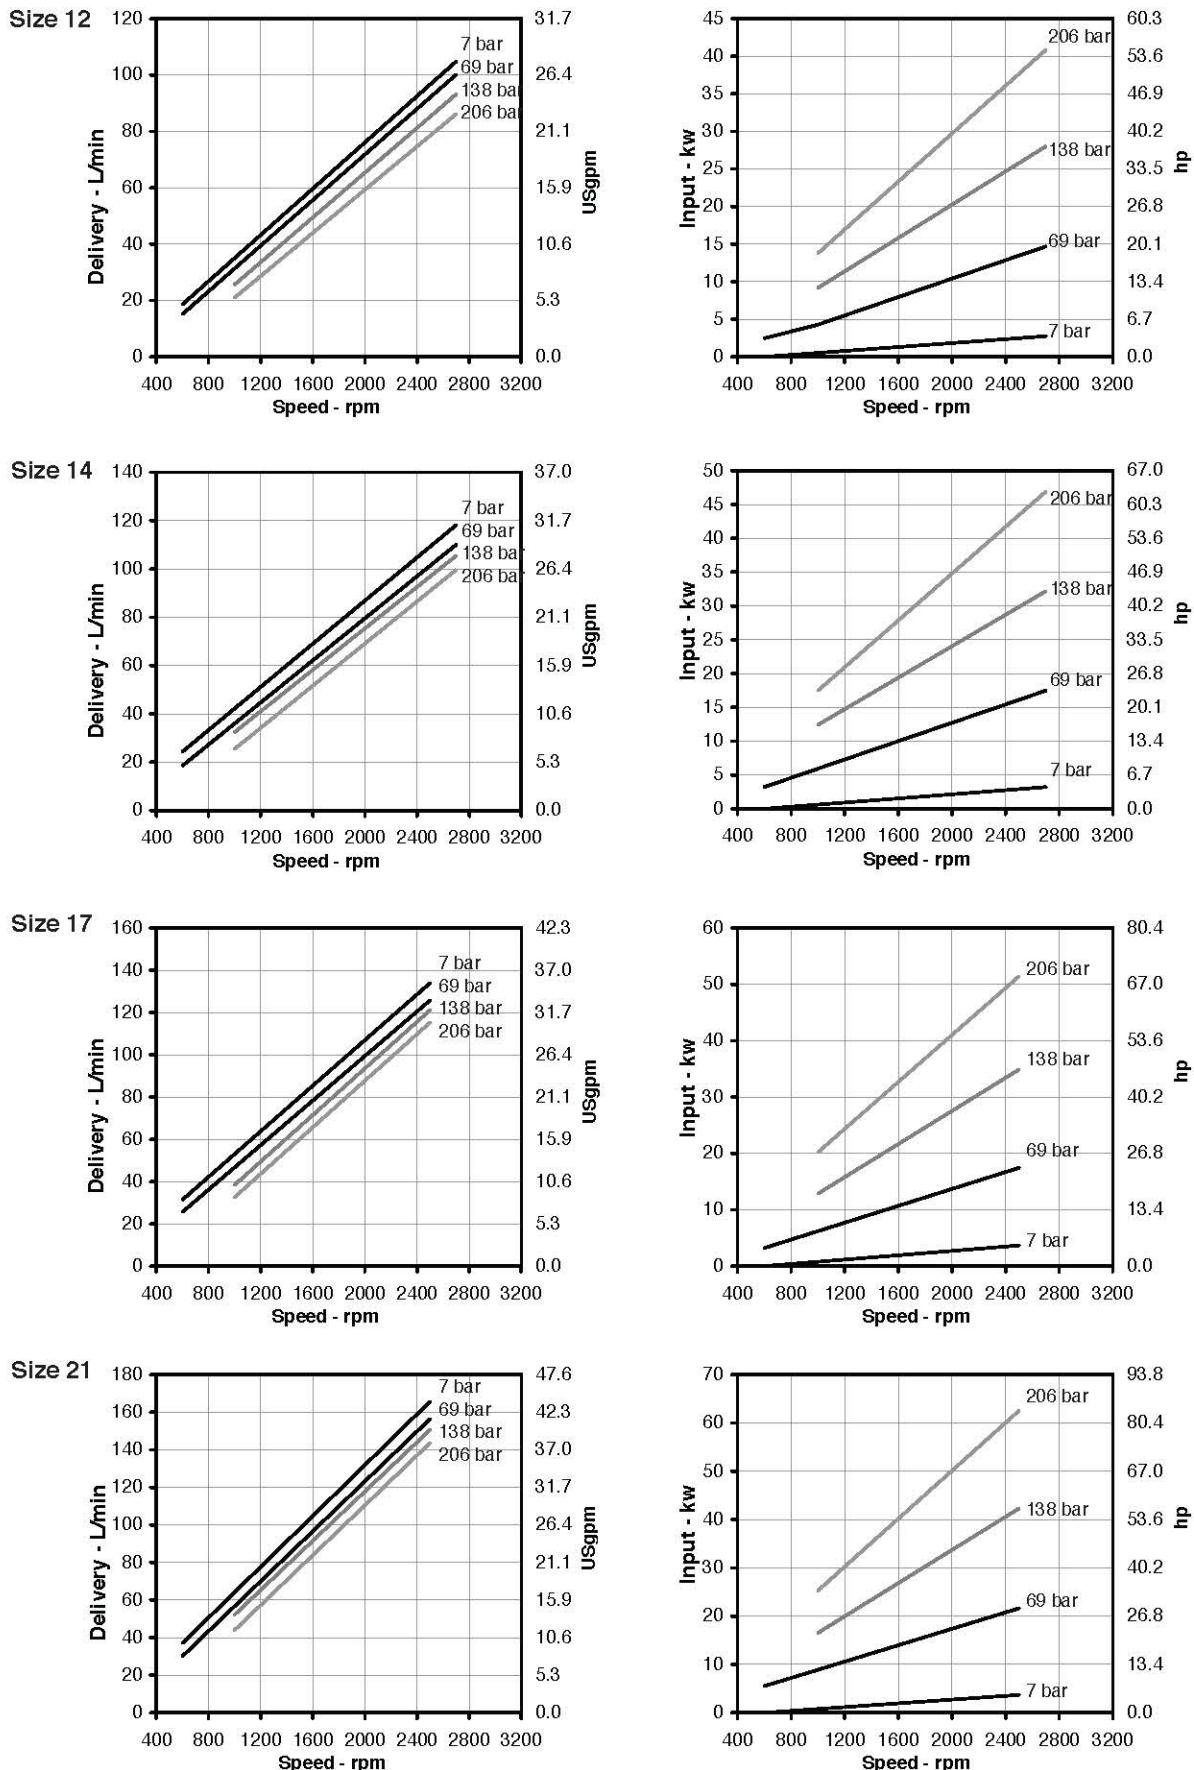

For the Cover End Cartridge, the speed could not exceed the maximum speed of the Shaft End Cartridge.

## Performance Characteristics

## 25HVQ, Shaft End of 25\*\*HVQ, Cover End of \*\*25HVQ

Based on SAE 10W Fluid at 82 °C (180 °F) and Pump inlet at 0 PSIG (14.7 PSIA)

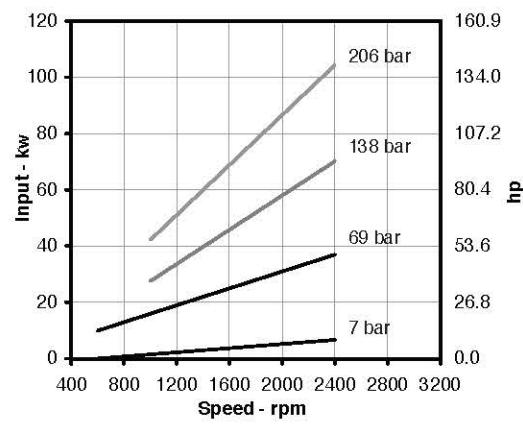

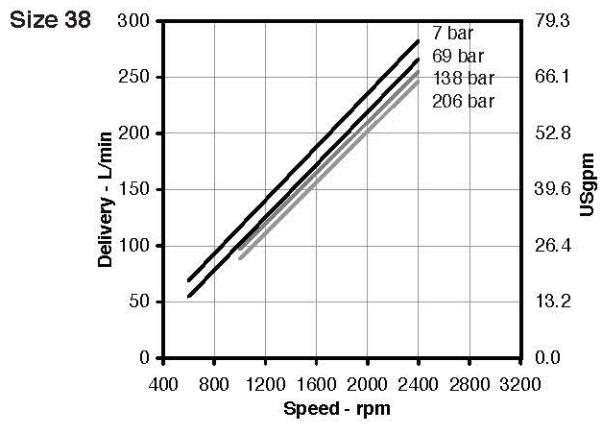

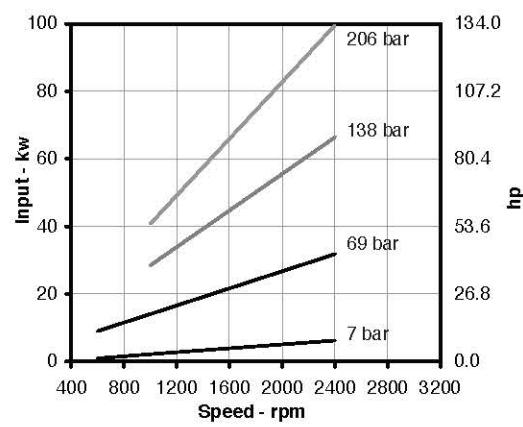

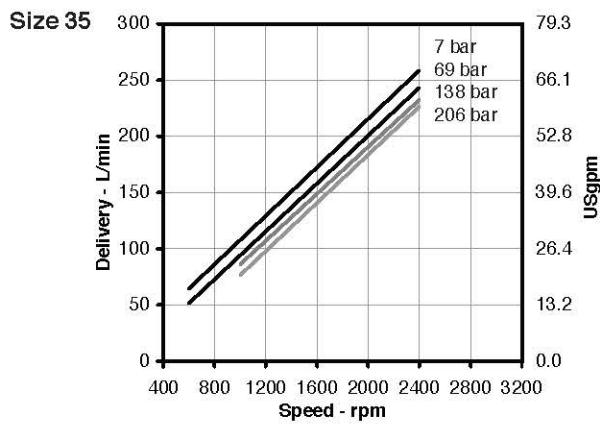

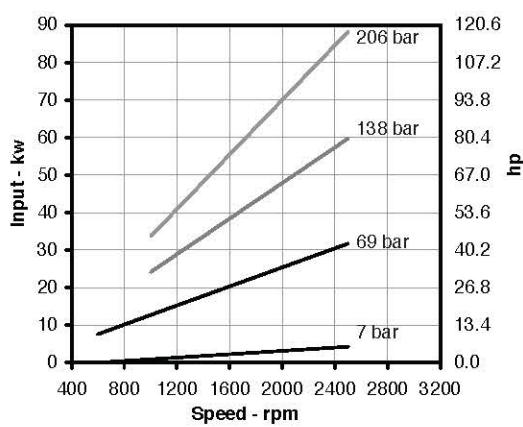

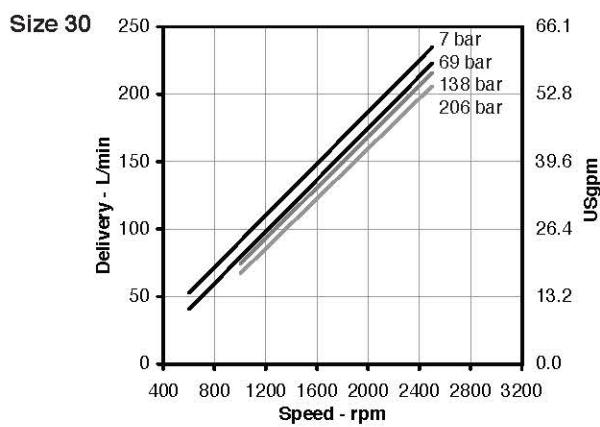

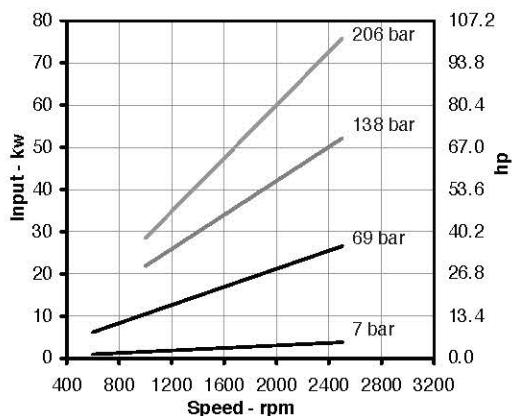

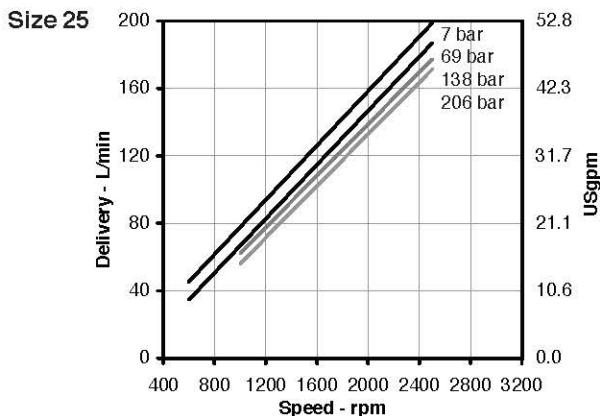

For the Cover End Cartridge, the speed could not exceed the maximum speed of the Shaft End Cartridge.

## Performance Characteristics

## 35HVQ, Shaft End of 35\*\*HVQ, Cover End

Based on SAE 10W Fluid at 82 °C (180 °F) and Pump inlet at 0 PSIG (14.7 PSIA)

For the Cover End Cartridge, the speed could not exceed the maximum speed of the Shaft End Cartridge.

## Performance Characteristics

45HVQ, Shaft End

Based on SAE 10W Fluid at 82 °C (180 °F) and Pump inlet at 0 PSIG (14.7 PSIA)
