

**VACON NXL**  
**THE EASY AND IMPRESSIVE AC DRIVE**

**VACON**  
DRIVEN BY DRIVES

## EASY TO PLUG, AND EASIEST TO PLAY

The Vacon NXL is a powerful and compact AC drive for industrial and residential purposes in the power range from 0.25 to 30 kW. The space-saving bookshelf design with high protection classes, versatile control and programming capabilities offer an optimal solution for all operating environments. Installation, connection and commissioning procedures are extremely quick and convenient with instructions attached to the unit.

Thanks to an extremely effective design, everything is included as standard. The units can be installed on the wall without additional cabinets because of high protection classes. The RFI filters and brake choppers are always integrated. The standard units fit almost everywhere in both industrial and residential areas. The integrated choke reduces the stress on supply transformers, cables and fuses.

### Convenient installation and programming

The installation and programming is extremely quick and convenient with the help of the credit-card-size Quick Guide. The programming is often just a selection of load type and fine-tuning of the motor nominal current and speed.

Although the Vacon NXL is simple in construction compared to other Vacon NX ranges, it is the most flexible drive in its class. The flexibility means a wide range of control possibilities, programmable features, installation possibilities and modularity. The easy-to-use PC tools can be used e.g. for programming and parameter copying. Sometimes it is possible to remove the PLC from the system by adding logic to the drive with the NC61131-3 PC tool.

The double rating of the Vacon NXL and dynamic open loop vector control make the NXL a perfect choice for all kinds of loads, from simple pumps and fans to demanding material handling applications.

The motor noise level is extremely low because of a high switching frequency and a near-sinusoidal current waveform.

### More features, more performance

- No additional cabinets required
- Everything integrated as standard (dust/water protection, RFI filter, AC choke, brake chopper)
- Easy to install, easy to use
- Low noise (both drive and motor)
- Large amount of control possibilities (via I/Os, field buses or display panel)
- Large amount of features (e.g. fully programmable I/O, auto-identification, PID controller, flying start)
- High performance

VACON NXL MF4-MF6, IP21

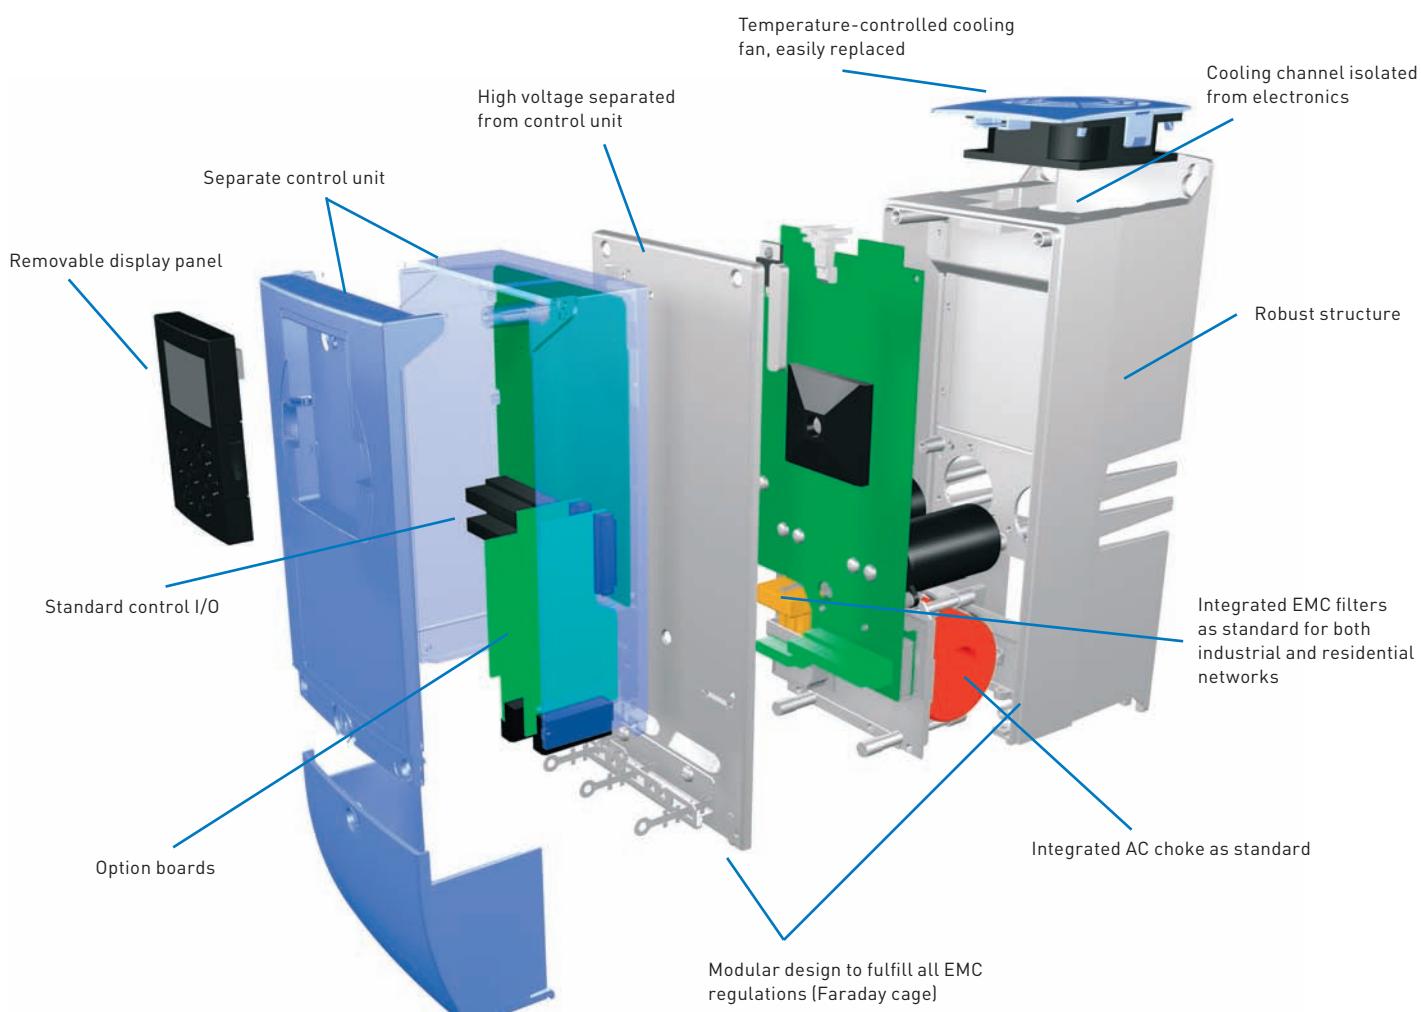

VACON NXL MF4-MF6, IP54

The mechanical design is extremely compact. The IP54 units in particular are the smallest AC drives on the market. All units are suitable for both wall and enclosure mounting with all necessary components: integrated EMC filters, AC chokes, cable protection, dust and water protection. The effective super-cooling principle allows high ambient temperatures and high switching frequencies without derating.

Motor nominal values			Vacon NXL features							
Voltage U (V)	Power High overload P <sub>H</sub> (kW)	Power Low overload P <sub>L</sub> (kW)	Supply voltage U (V)	EMC	Enclosure	Dimensions W x H x D (mm)	Weight (kg)	Integrated brake chopper	Integrated AC choke	Mechanical frame size

NXL	0031	5 C 2 H 1	31	34	23	35	46	15	11	MF5
NXL	0038	5 C 2 H 1	38	42	31	47	62	18.5	15	MF6
NXL	0046	5 C 2 H 1	46	51	38	57	76	22	18.5	MF6
NXL	0061	5 C 2 H 1	61	67	46	69	92	30	22	MF6

\* Type code of the IP21 unit. The type code of the IP54 unit: replace '2' with '5'; for example, NXL 0003 5C5H1

For all Vacon NXL drives, overloadability is defined as follows:

High:  $1.5 \times I_H$  (1 min/10 min) at 50°C; Low:  $1.1 \times I_L$  (1 min/10 min) at 40°C;  $I_S$  for 2 seconds every 20 seconds.

## VACON NXL MF4—MF6 TYPE DESIGNATION CODE

## COMPACT YET SO POWERFUL

The Vacon NXL range also offers compact, cabinet-mounted units for lower motor powers. Frames MF2 and MF3 are suitable for both 208–230 V and 380–500 V supply voltages for powers up to 2.2 kW. The compact size and flexible installation options make the Vacon NXL suitable for installations where space is at a premium. The standard control I/O can be extended with one I/O expander board or one fieldbus board.

### Features

- Small size
- Flexible installation (back or side, screw or DIN rail)
- Easy to install and use
- Low noise
- Large amount of control possibilities (via I/Os, fieldbuses or display panel)
- Large amount of features (e.g. fully programmable I/O, auto-identification, PID controller, flying start)
- High performance
- RFI filters and AC chokes available as options

### Mains voltage 380—500 V, 50/60 Hz, 3~, enclosure class IP20, EMC level N

AC drive type	Loadability					Motor shaft power		Frame size and dimensions (W x H x D)	
	Low		High		Maximum current $I_s$	400 V supply			
	Rated continuous current $I_L$ (A)	10% overload current (A)	Rated continuous current $I_H$ (A)	50% overload current (A)		10% overload 40°C P (kW)	50% overload 50°C P (kW)		
NXL 0001 5C1N0	1.9	2.1	1.3	2.0	2.6	0.55	0.37	MF2 / 60 x 130 x 150

NXL 0003 5C1N1	3.3	3.6	2.4	3.6	4.8	1.1	0.75	MF3 / 84 x 220 x 172	
NXL 0004 5C1N1	4.3	4.7	3.3	5.0	6.6	1.5	1.1	MF3 / 84 x 220 x 172	
NXL 0005 5C1N1	5.4	5.9	4.3	6.5	8.6	2.2	1.5	MF3 / 84 x 220 x 172	

### Mains voltage 208—240 V, 50/60 Hz, 1/3~ (3~ motor), enclosure class IP20, EMC level N

AC drive type	Loadability					Motor shaft power		Frame size and dimensions (W x H x D)	
	Low		High		Maximum current $I_s$	230 V supply			
	Rated continuous current $I_L$ (A)	10% overload current (A)	Rated continuous current $I_H$ (A)	50% overload current (A)		10% overload 40°C P (kW)	50% overload 50°C P (kW)		
NXL 0002 2C1N0*	2.4	2.6	1.7	2.6	3.4	0.37	0.25	MF2 / 60 x 130 x 150	
NXL 0003 2C1N1	3.7	4.1	2.8	4.2	5.6	0.75	0.55	MF3 / 84 x 220 x 172	
NXL 0004 2C1N1	4.8	5.3	3.7	5.6	7.4	1.1	0.75	MF3 / 84 x 220 x 172	
NXL 0006 2C1N1	6.6	7.2	4.8	7.2	9.6	1.5	1.1	MF3 / 84 x 220 x 172	

\* suitable only for single-phase supply voltage (the rest suitable for both single-phase and three-phase supply voltages)

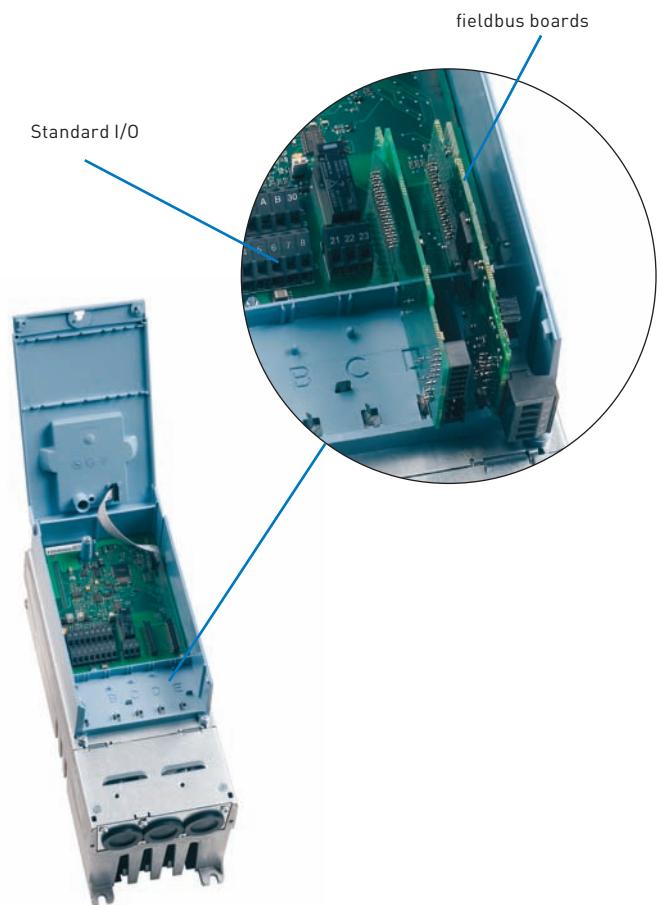

## VACON NXL CONTROL UNIT

The standard I/O of the Vacon NXL has been optimized for typical control requirements. In addition to digital and analog inputs and outputs, RS485 (Modbus RTU) is included as standard. All inputs and outputs of the standard I/O and option boards are freely programmable. Both Analog Inputs can be programmed for 0...10 V or 0(4)...20 mA signals. Analog Input can also be programmed as Digital Input.

The standard I/O can easily and cost-effectively be extended with OPT-AA or OPT-AI boards, if necessary. The OPT-AA is the most effective way to add one more Relay Output, and the OPT-AI is normally used when galvanically isolated motor thermistor connection is needed. These boards are installed in option board slot E.

It is also possible to control the Vacon NXL with various kinds of fieldbuses with OPT-C-type boards (see the table below). The I/O extension and fieldbus boards are the same for all Vacon NX products. The fieldbus boards can be installed in slot D or E.

There are a large number of OPT-B-type option boards available. The most typical boards are included in the table below. It is possible, for instance, to add three more output relays with OPT-B5, if necessary. The OPT-B-type boards are typically installed in slot E.

## VACON NXL OPTION BOARDS

Card typecode	Slot		I/O signal										NOTE
	D	E	DI	DO	AI mA isol.	AO mA isol.	RO NO NC	RO NO	Therm	+24 EXT +24V			
<b>Basic I/O cards (OPT-A)</b>

## VACON NXL CONTROL I/O

### Standard I/O

Terminal	Signal, default settings
1 1...10 kΩ	+10V Reference voltage
2 AI1+	Analog input, 0–10 V (0/4–20 mA)
3 AI1-	AI common
4 AI2+	Analog input, 0/4–20 mA (0–10 V)
5 AI2-	AI common
6 +24V	24V auxiliary voltage
7 GND	I/O ground
8 DIN1	Start forward
9 DIN2	Start reverse
10 DIN3	Preset speed 1
11 GND	I/O ground
18 A01+	Analog output, output frequency
19 A01-	A0 common
A RS485	Serial bus (Modbus RTU)
B RS485	Serial bus
30 +24V	External control voltage supply
21 R01	Relay output 1, FAULT
22 R01	Relay output 1, RUN
23 R01	Relay output 1, RUN

All inputs and outputs of the standard I/O and option boards are freely programmable.

### OPT-AA (typical option)

Terminal	Signal, default settings
1 +24V	24 V auxiliary voltage
2 GND	I/O ground
3 DIN1	Preset speed 2
4 DIN2	Fault reset
5 DIN3	Disable PID
6 D01	Digital output, Ready
24 R01	Relay output 1, RUN
25 R01	Relay output 1, RUN
26 R01	Relay output 1, RUN

### OPT-AI (typical option)

Terminal	Signal, default settings
12 +24V	24 V auxiliary voltage
13 GND	I/O ground
14 DIN1	Preset speed 2
15 DIN2	Fault reset
16 DIN3	Disable PID
25 R01	Relay output 1, RUN
26 R01	Relay output 1, RUN
28 TI1+	Thermistor input
29 TI1-	(galvanically isolated)

## OTHER TYPICAL OPTIONS

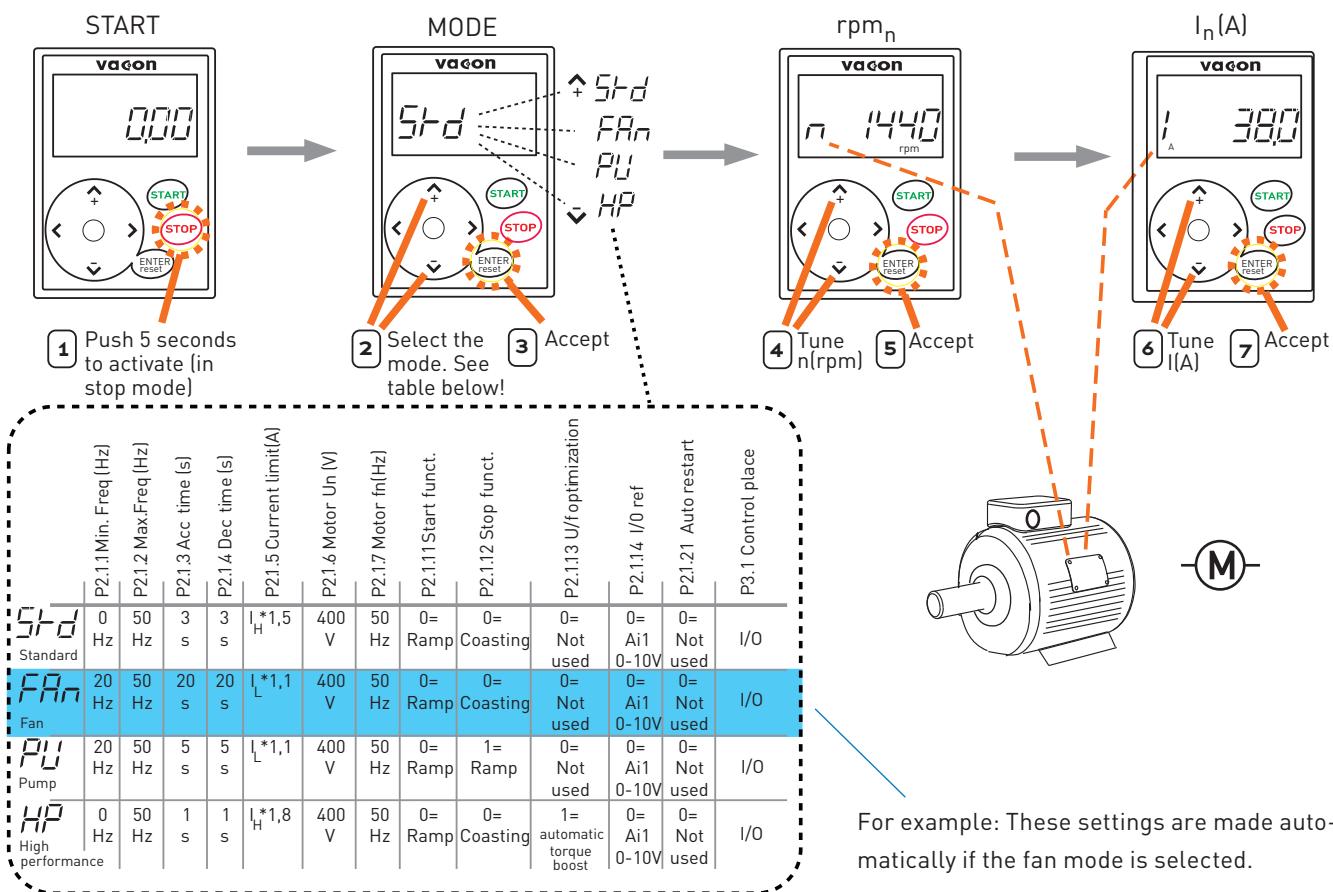

OPTION	ORDER TYPECODE	SUITABILITY	NOTE
IP54 enclosure	Factory option	MF4-MF6	Replace '2' by '5' in the type code, e.g. NXL00315C5H1 (SSS...)
	IP5-FR_	MF4-MF6	IP54 kit, e.g. IP5-FR4
Through-hole mounting	Factory option	MF4-MF6	E.g. NXL00315CTH1STS..., IP54 back, IP21 front, kits available
External brake resistors	BRR-0022-LD-5	00035-00225	LD = Light Duty: 5 sec nominal torque braking from nominal speed decreasing linearly to zero, once per 120 sec. HD = Heavy Duty: 3 sec nominal torque braking at nominal speed + 7 sec nominal torque braking from nominal speed decreasing linearly to zero, once per 120 sec. Replace LD by HD in the type code, e.g. BRR-0031-HD-5 The brake resistor manual is available for more precise selection
	BRR-0031-LD-5	00315	
	BRR-0045-LD-5	00385-00465	
	BRR-0061-LD-5	00615	
Panel door installation sets	DRA-02L DRA-04L	All	Door installation set with a 2-m RS232C cable Door installation set with a 4-m RS232C cable
PC adapter	PAN-RS	All	Adapter PAN-RS and a RS232C cable are required for PC connection
RS232C cables	RS232C-2M RS232C-4M	All	2-meter-long RS232C cable for PC connection 4-meter-long RS232C cable for PC connection
Varnished circuit boards	Factory option	MF4-MF6	Replace the 'S' by 'V', e.g. NXL00315C5H1SSV...
C-level RFI filters	Factory option	MF4-MF6	Replace 'H' by 'C' in the typecode, e.g. NXL00315C2C1 (SSS...)

### OPTIONS FOR COMPACT UNITS (MF2-MF3)

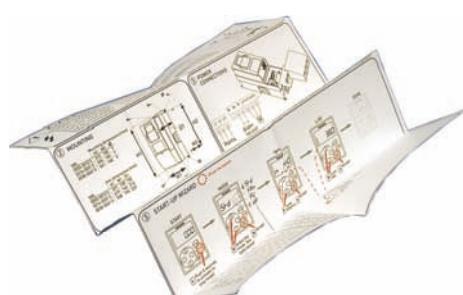

RFI filters	RFI-0012-2-1	00022-00062	RFI filter for 208–230 V units, H level, 1~ supply
	RFI-0013-2-1	00022-00062	RFI filter for 208–230 V units, H level, 1~ supply, footprint installation
	RFI-0008-5-1	00015-00055	RFI filter for 380–500 V units, H level, footprint installation
DIN rail installation	Factory option	MF2-MF3	Replace 'S' by 'D' in the typecode, e.g. NXL 00025C1HO SDS

The basic settings can be programmed by simply launching the Vacon NXL start-up wizard. Only four steps are required, and the drive is ready to run.

START-UP WIZARD  =Push the button

The instructions to install, connect and program the Vacon NXL are included in the credit-card size Quick Guide attached to each unit.

## MULTI-CONTROL APPLICATION

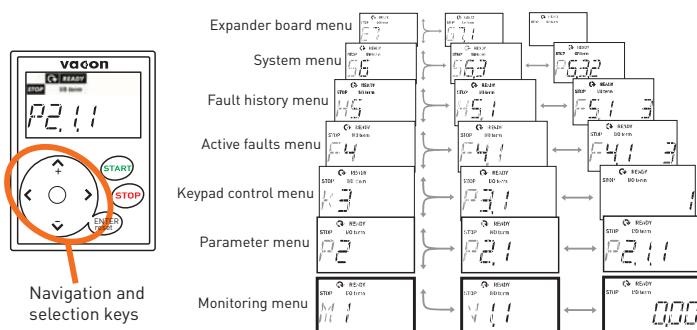

The standard Multi-Control Application software of the Vacon NXL is extremely flexible and easy to use. All inputs and outputs are programmable, and there is a full set of features and possibilities for system or process control and protections.

The default settings are very close to optimum, and the drive operates accurately enough without any programming. It still is recommended to check and fine-tune the motor nominal values to optimize the performance and motor protection. Programming can be made simply by using the start-up wizard feature of the display panel, programming parameter by parameter with display panel, or programming by the NCDrive tool. The instructions, if required, can be found in the credit-card-size Quick Guide.

There are many parameters and features which can be utilized, if necessary. For example:

- PID controller
- Pump and fan control for a maximum of 4 parallel motors
- Flying start
- Auto-tuning
- Programming of all control inputs and outputs
- Output relay delays

In addition to the standard MultiControl Application software, some special application software is also available. It is even possible to make totally customer-specific software with the NC61131-3 Engineering tool, and remove the PLC by integrating the logic to the NXL software.

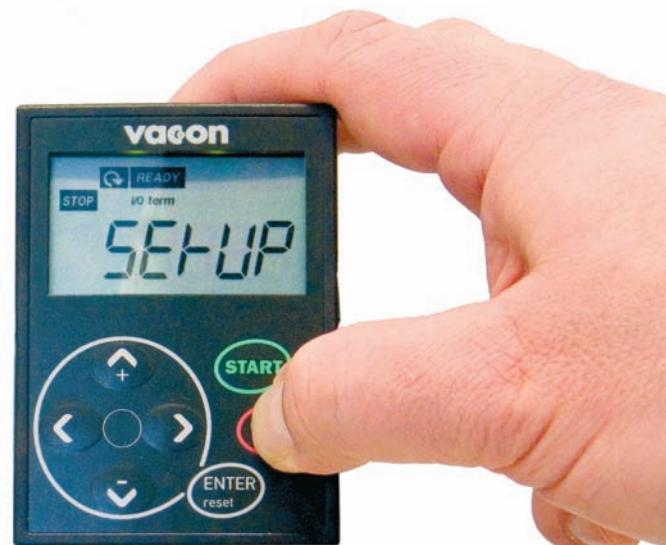

Navigating the menu structure (e.g. special parameters, monitoring signals)

The Vacon PC tools are available for downloading from the Vacon website at <http://www.vacon.com>. These include:

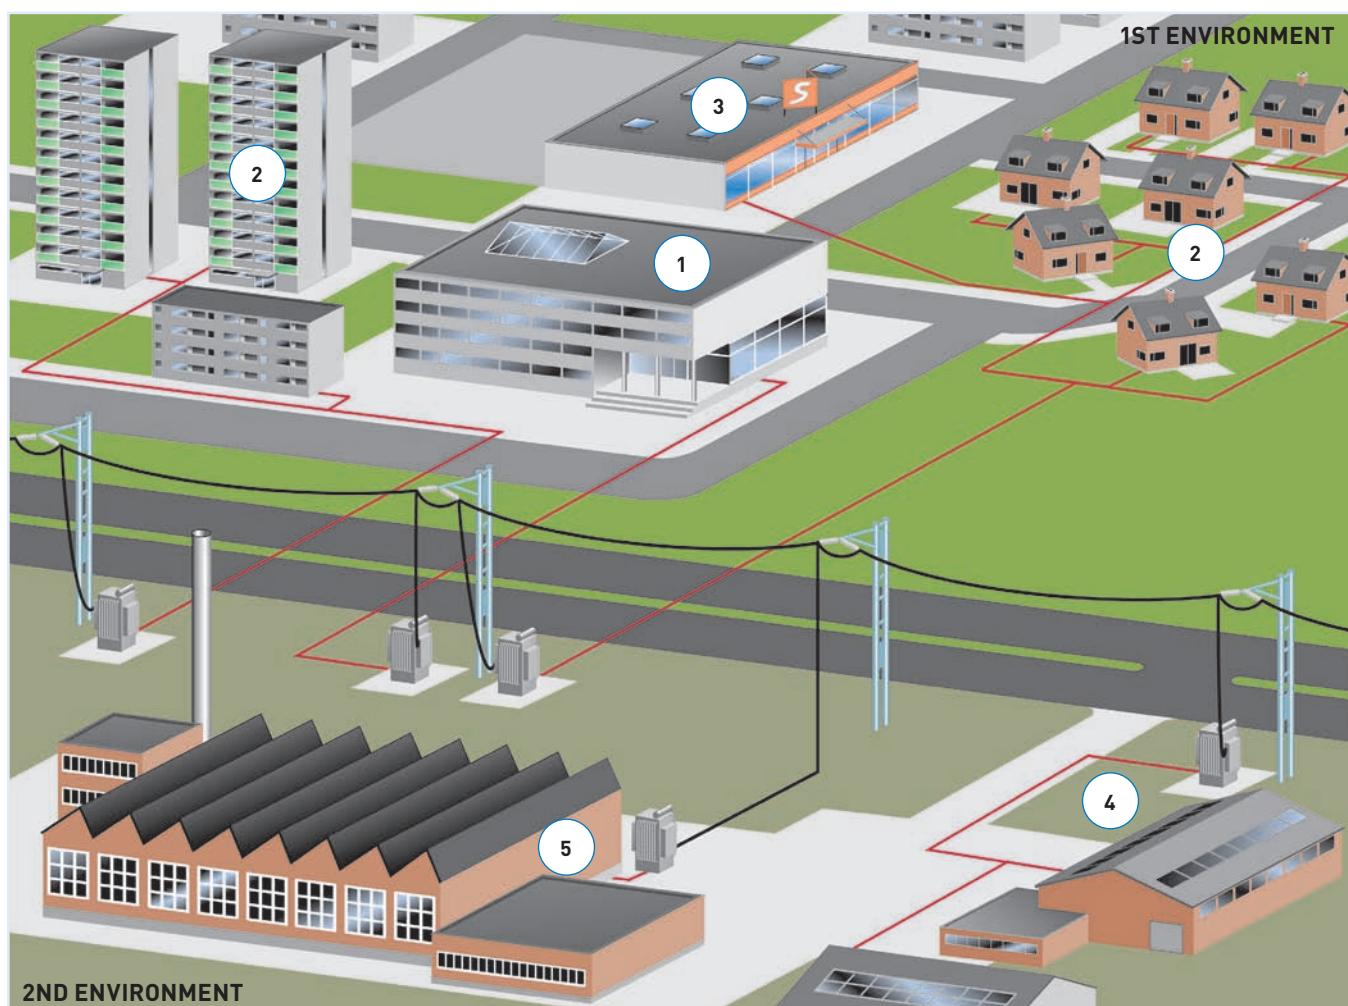

- Vacon NCDrive for parameter setting, copying, storing, printing, monitoring and controlling
- Vacon NCLoad for software updating and uploading special software to the drive
- Vacon NC61131-3 Engineering is available for making tailor-made software. (A license key and training required)

The following software applications are available for special requirements:

- Brake control
- Lift
- Multi-motor
- Sliding door
- Local/remote
- Fire mode
- Multi-purpose

Activating the start-up wizard

The product family standard EN61800-3 sets limits for both emissions and immunity of radio frequency disturbances. The environment has been divided into the 1st and 2nd environments, which, in practice, means public and industrial networks.

Radio Frequency Interference (RFI) filters are typically required to meet the EN61800-3 standard. These filters are integrated in the Vacon NXL MF4-MF6 as standard.

The Vacon NXL fulfills all the requirements of the 1st and 2nd environments (H level: EN61800-3 (2004), category C2). No additional RFI filters or cabinets are required for frames MF4-MF6.

The Vacon NXL MF4-MF6 units are also available with extremely low-emission integrated EMC filters (C level: EN61800-3 (2004), category C1; EN55011, class B). These filters are sometimes required in very sensitive locations such as hospitals.

## EMC Selection Table, restricted distribution

	1	2	3	4	5

	Thermistor input	Galvanically isolated, $R_{trip} = 4.7 \text{ k}\Omega$ (OPT-AI)
<b>Protections</b>		Overvoltage, undervoltage, earth fault, motor phase supervision, overcurrent, unit overtemperature, motor overload, motor stall, motor underload, short-circuit of +24 V and +10 V reference voltages

**VACON NXS**  
**ROBUST DRIVE FOR HEAVY USE**

**VACON**  
DRIVEN BY DRIVES

The Vacon NXS is a compact AC drive in the power range of 0.37–560 kW and supply voltages of 208–690 V for heavy use in machines, buildings and all branches of industry.

The robust design incorporates effective protection against supply network disturbances. Trip-free operation is also guaranteed due to sophisticated motor control principles and motor/drive protection features, component selection and effective cooling.

Enclosure classes of IP21 and IP54 and integrated high-level EMC filters make the Vacon NXS suitable for all environments.

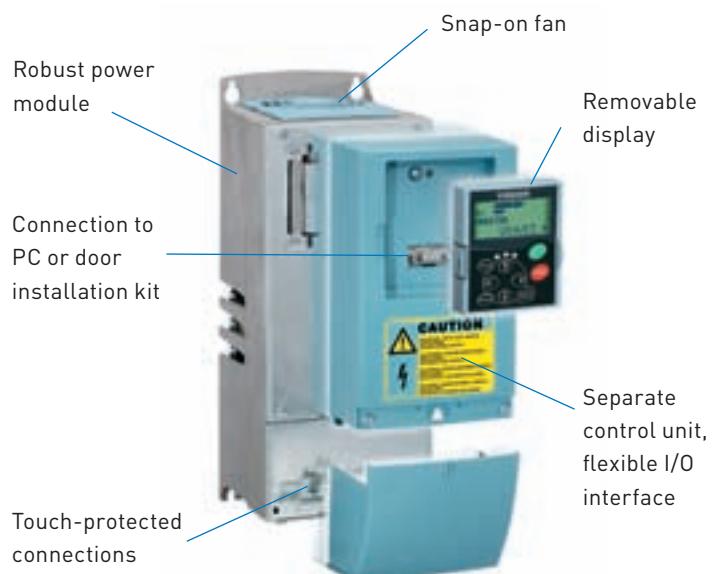

The Start-Up Wizard and the standard All-In-One Application Package make parameter setting extremely easy in all cases, from simple to complex.

The wide and flexible standard I/O and option for five I/O boards provide versatile controllability. The most common fieldbus options are also available.

The modular design of the Vacon NXS brings several advantages: the control terminals are safely separated from power terminals, upgrading the control inputs and outputs is easy and convenient, replacing the cooling fan (the only regularly replaceable component) is fast, the display panel can be utilized for parameter copying, etc.

## Features

- Easy to use display panel
  - Interactive programming with Start-Up Wizard
  - Versatile All-in-One Package
  - PID controller and PFC for 1-5 pumps
  - Special applications available  
(water application package, high speed, etc.)
  - Five slots for control boards (2 basic boards and 3 option boards)
  - High switching frequency, low noise
  - Steady state speed error < 1%
  - Low torque ripple
  - Starting torque > 200%, depending on AC drive sizing
  - Suitable for multi-motor applications

## DESIGN & DIMENSIONS

The mechanical design is extremely compact. The IP54 units in particular are the smallest AC drives on the market. All units are suitable for both wall and enclosure mounting with all necessary components: integrated EMC filters, AC chokes, cable protection, dust and water protection. The effective super-cooling principle allows high ambient temperatures and high switching frequencies without derating.

### Mains voltage 380—500 V, 50/60 Hz, 3~, Wall-mounted units

For all Vacon NXS drives, overloadability is defined as follows:

High:  $1.5 \times I_H$  (1 min/10 min) @ 50°C; Low:  $1.1 \times I_L$  (1 min/10 min) @ 40°C;  $I_S$  for 2 sec every 20 sec.

## VACON NXS TYPE DESIGNATION CODE

**NXS 0007 5 A 2 H 1 SSS A1A20000C3**

## VACON NXS CONTROL UNIT

There are no fixed inputs or outputs in the Vacon NXS. There are five slots (A, B, C, D and E) for I/O boards, and a suitable board can be selected for each slot (see the table below).

The NXS units are delivered with OPT-A1 and OPT-A2 boards if the I/O is not specified. In many countries, boards OPT-A1 and OPT-A3 are used as standard I/O as the galvanically isolated thermistor input is often required.

Removable terminals, snap-in card installation, automatic card identification and instructions on the drive help making quick connections. If necessary, the inputs, outputs and fieldbus boards can be added in the field. The Vacon NXS is simply the most flexible frequency converter series on the market.

An external +24 V supply option enables communication with the control unit even if the mains supply is switched off (e.g. fieldbus communication and parameter settings).

## VACON OPTION BOARDS

**OTHER TYPICAL OPTIONS**

OPTION	ORDER TYPECODE	AVAILABILITY	NOTE
IP54 enclosure	Factory option	All	Replace '2' by '5' in the type code, e.g. NXS02605A5H0 (SSS...)
	IP5-FR_	FR4, FR5, FR6	IP54 kit, e.g. IP5-FR4
Through-hole mounting	Factory option	FR4-FR9	E.g. NXS02605ATH0STS..., IP54 back, IP21 front, kits available
Integrated brake choppers	Standard	FR4-/230, 500 V	E.g. NXS00455A2H1 (SSS...)
	Factory option	FR7-, FR6-/690 V	E.g. NXS02605A2H1 (SSS...)
External brake resistors (380 - 500 V range)	BRR-0022-LD-5	00035-00225	LD = Light duty: 5 sec nominal torque braking from nominal speed decreasing linearly to zero, once per 120 sec.
	BRR-0031-LD-5	00315	HD = Heavy duty: 3 sec nominal torque braking at nominal speed + 7 sec nominal torque braking from nominal speed decreasing linearly to zero, once per 120 sec.
	BRR-0045-LD-5	00385-00455	Replace LD by HD in the type code, e.g. BRR-0105-HD-5
	BRR-0061-LD-5	00615	Brake resistors are also available for 208-240 V and 525-690 V NXS drives
	BRR-0105-LD-5	00725-01055	The brake resistor manual is available for more precise selection
	BRR-0300-LD-5	01405-03005	
Integrated brake resistors	Factory option	FR4-/500 V	Replace '1' by '2' in the typecode, e.g. NXS00455A2H2 (SSS...) Light duty: 2 sec nominal torque braking from nominal speed decreasing linearly to zero, once per 60 sec.
Graphical display panel	Factory option	All	Replace 'A' by 'G', e.g. NXS00455G2H1 (SSS..), supports Chinese & Russian
	PAN-G	All	Order typecode when ordered separately
Panel door installation sets	DRA-02B (-04B, -15B)	All	Length of RS232C cable is specified in the typecode, e.g. DRA-02B includes 2-meter RS232C cable
Varnished circuit boards	Factory option	All	Frame sizes FR4-FR8: replace the 'S' by 'V', e.g. NXS00455A2H1SS..., frame size FR9-FR11: replace 'S' by 'G'
C-level RFI filters	Factory option	FR4-/500 V	Replace 'H' by 'C' in the typecode, e.g. NXS00455A5C1 (SSS..)
Du/dt & sinus filters			Available for all drives, contact local Vacon supplier

The uncluttered text display panel with a well-defined menu structure and functions such as automatic parameter copy and start-up wizard makes commissioning and fine-tuning as easy as possible.

A maximum of three values can be monitored simultaneously (the multi-monitoring feature).

The Vacon PC tools are available for downloading from the Vacon website at <http://www.vacon.com>. These include:

- Vacon NCDrive for parameter setting, copying, storing, printing, monitoring and controlling
- Vacon NCLoad for software updating and uploading special software to the drive
- Vacon NC61131-3 Engineering is available for making tailor-made software. A license key and training required.

The Vacon PC tools require only an RS232C cable for communication with the drive (no adaptors etc. required).

Two external control places

## SOFTWARE MODULARITY

### All-in-one Application package (standard)

### Water Solutions application package (option)

### Special Applications (several options)

The All-in-One application package has seven applications (=default settings and functionality of control inputs and outputs, see tables below) which can be selected with one parameter. The application will also be requested by the Start-up Wizard at the first power-up. With this single setting, the controls can be programmed e.g. for two external control places or a pressure control with the integrated PID controller. In most cases, the default basic application is suitable and only the min/max frequencies as well as motor nominal values must be set.

Thanks to the modular software applications made by the Vacon NC61131-3 Engineering tool, the All-in-One application package can be replaced by the Water application package that contains several applications optimized for water handling. There are also several other general-purpose software applications available.

P = Programmable

Control of up to five pumps with auto-change

The product family standard EN61800-3 sets limits for both emissions and immunity of radio frequency disturbances. The environment has been divided into the 1st and 2nd environments, i.e. in practice, the public and industrial networks, respectively.

Radio Frequency Interference (RFI) filters are typically required to meet the EN61800-3 standard. These filters are integrated in the Vacon NXS as standard.

The 208–240 V and 380–500 V ranges of the Vacon NXS (FR4–FR9) fulfills the requirements of the 1st and 2nd environments (H level: EN61800-3(2004), category C2). No additional RFI filters or cabinets are required. The FR10–FR11 and the 525–690 V range of the Vacon NXS fulfills the requirements of the 2nd environment (L-level: EN61800-3(2004), category C3).

The units in the frame sizes of FR4, FR5 and FR6 (the voltage range from 380 to 500 V) are also available with extremely low-emission integrated EMC filters (C level: EN61800-3 (2004), category C1). This is sometimes required in very sensitive locations such as hospitals.

## TECHNICAL DATA

<b>Mains connection</b>	Input voltage $U_{in}$	208...240 V; 380...500 V; 525...690 V; (-15%...+10%)
	Input frequency	50...60 Hz ( $\pm 10\%$ )
	Connection to mains	Once per minute or less (normal case)
<b>Motor connection</b>	Output voltage	$0-U_{in}$
	Continuous output current	High overloadability: $I_H$ Low overloadability: $I_L$
	Overloadability	High: $1.5 \times I_H$ (1 min/10 min), Low: $1.1 \times I_L$ (1 min/10 min)
	Max. starting current	$I_s$ for 2 s every 20 s
	Output frequency	0...320 Hz; up to 7200 Hz with special software
	Frequency resolution	0.01 Hz
<b>Control characteristics</b>	Control method	Frequency control U/f; Open Loop Vector Control (speed, torque)
	Switching frequency	208..240V/380..500V: FR4-6: 1...16 kHz; Factory default: 10 kHz FR7-9: 1...10 kHz; Factory default: 3.6 kHz FR10-11: 1...6 kHz; Factory default: 3.6 kHz 525..690V: FR4-11: 1...6 kHz, Factory default: 1.5 kHz
	Field weakening point	8...320 Hz
	Acceleration time	0...3000 sec
	Deceleration time	0...3000 sec
	Braking	DC brake: $30\% * T_N$ (without brake resistor), flux braking
	Ambient operating temperature	-10°C (no frost)...+50°C: $I_H$ (FR10-FR11: max +40°C) -10°C (no frost)...+40°C: $I_L$ (NXS 0416 6 and NXS 0590 6: max +35°C)
	Storage temperature	-40°C...+70°C
<b>Ambient conditions</b>	Relative humidity	0 to 95% RH, non-condensing, non-corrosive, no dripping water
	Air quality: - chemical vapours - mechanical particles	IEC 60721-3-3, unit in operation, class 3C2 IEC 60721-3-3, unit in operation, class 3S2
	Altitude	100% load capacity (no derating) up to 1000 m 1%-derating for each 100 m above 1000 m; max. 3000 m
	Vibration EN50178/EN60068-2-6	5...150 Hz: Displacement amplitude 1 mm (peak) at 5...15.8 Hz (FR10-FR11: 0.25 mm (peak) at 5...31 Hz) Max acceleration amplitude 1 G at 15.8...150 Hz (FR10 and up: 1 G at 31...150 Hz)
	Shock EN50178, EN60068-2-27	UPS Drop Test (for applicable UPS weights) Storage and shipping: max 15 G, 11 ms (in package)
	Enclosure class	IP21 and IP54
	Immunity	Fulfil all EMC immunity requirements
	Emissions	<b>EMC level C:</b> EN61800-3 (2004), category C1 <b>EMC level H:</b> EN61800-3 (2004), category C2 <b>EMC level L:</b> EN61800-3 (2004), category C3 <b>EMC level T:</b> Low earth-current solution suitable for IT networks, EN61800-3 (2004), category C4
<b>Safety</b>		EN 50178 (1997), EN 60204-1 (2006), IEC 61800-5, CE, UL, CUL; (see unit nameplate for more detailed approvals)
<b>Control connections (OPT-A1, -A2 or OPT-A1, -A3)</b>	Analogue input voltage	0...+10 V (-10 V...+10 V joystick control), $R_i = 200 \text{ k}\Omega$ , resolution 0.1%, accuracy $\pm 1\%$
	Analogue input current	0[4]...20 mA, $R_i = 250 \Omega$ differential, resolution 0.1%, accuracy $\pm 1\%$
	Digital inputs	6, positive or negative logic; 18...30 VDC
	Auxiliary voltage	+24 V, $\pm 15\%$ , max. 250 mA
	Output reference voltage	+10 V, $\pm 3\%$ , max. load 10 mA
	Analogue output	0[4]...20 mA; $R_L$ max. 500 $\Omega$ , resolution 10 bit, accuracy $\pm 2\%$
	Digital output	Open collector output, 50 mA/48 V
	Relay outputs	2 programmable change-over (NO/NC) relay outputs (OPT-A3: NO/NC+NO) Switching capacity: 24 VDC/8 A, 250 VAC/8 A, 125 VDC/0.4 A. Min. switching load: 5 V/10 mA
	Thermistor input (OPT-A3)	Galvanically isolated, $R_{trip} = 4.7 \text{ k}\Omega$
<b>Protections</b>		Overtvoltage, undervoltage, earth fault, mains supervision, motor phase supervision, overcurrent, unit overtemperature, motor overload, motor stall, motor underload, short-circuit of +24 V and +10 V reference voltages

## VACON NXP AND NXc SUPERLATIVE PERFORMANCE

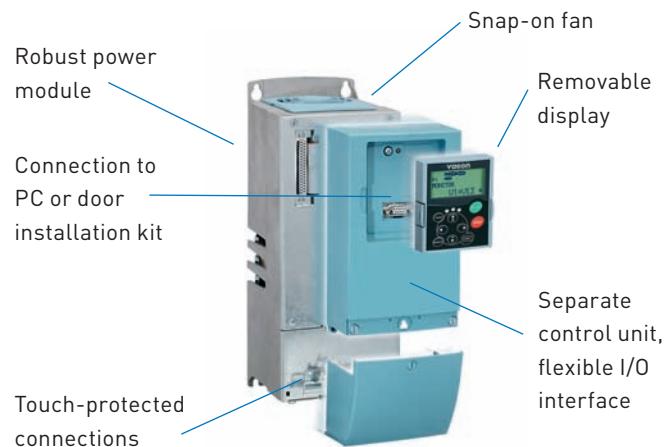

**VACON**  
DRIVEN BY DRIVES

The Vacon NXP is a state-of-art AC drive for use in all applications where reliability, dynamic performance, precision and power are required.

The quality and reliability of a machine or process is, in most cases, the result of the precise, dynamic control of AC motors. The Vacon NXP has been designed to provide the best possible control under all circumstances, ensuring high operational quality and availability for the entire lifetime of a system.

A forerunner in designing and manufacturing AC drives, Vacon has developed innovative solutions and leading-edge technology for demanding applications and high power ranges.

By making these solutions available to customers, the Vacon NXP opens up new opportunities and helps them create exceptional and highly innovative products, and achieve the most challenging targets.

## Key features and benefits

### Full power and voltage range

The use of the same control part, option boards, same software and diagnostic tools lowers the investment costs, and minimizes training and commissioning time.

### High number of standardized options

Easy to order and well-documented options reduce the need for additional engineering.

### Wide range of applications adapts the Vacon NXP to virtually any need

Ready applications, even for the most demanding use, reduce the need for application engineering.

### Controls induction and permanent magnet motors

The same NXP drive is used for induction and PM motor control. No need to consider any special arrangements or additional engineering.

### Dynamic open and closed loop vector control

Accurate control, even in the most demanding applications, improves productivity and quality.

### Complete range of communications and I/O options

Ready and well-documented option boards to satisfy almost any requirements while reducing the amount of additional engineering.

### Marine type approvals and functional safety features

Reduces the need for additional certification while lowering investment costs.

## VACON NXP FR4-FR9

## OUTSTANDING FLEXIBILITY

The Vacon NXP offers, in addition to its control characteristics, a wide choice of products for different needs within the whole power range.

Four models are available to meet various customer needs:

- Vacon NXP IP21/IP54 wall-mounted or standalone drives
- Vacon NXP high-power IP00 drive modules for cabinet installation
- Vacon NXC robust cabinet drive with maximum flexibility and a wide range of options
- Vacon NXC low-harmonic cabinet drive for applications where low-harmonics are required

For the lower power range, Vacon NXP drives are available in a compact IP21 or IP54 enclosure. The Vacon NXP is one of the most compact and complete packages on the market, which has all the necessary components integrated within a single enclosure.

The wall-mounted units are equipped with internal EMC filtering, and the power electronics are integrated into an all-metal frame. The smaller frame sizes (FR4-FR6) have an integrated brake chopper as standard, and the 380-500 V units can be equipped with an integrated brake resistor. The larger frames (FR7-FR12) can be equipped with an integrated brake chopper as an option.

High-power Vacon NXP drives are also available in a compact standalone IP21 or IP54 enclosure. These units are designed for use in applications where the drive has to be compact and easy to install.

The Vacon NXP standalone drives are fully enclosed at the factory and are ready for immediate installation. The drive has integrated fuses as standard and no extra protections are required. It is also possible to equip the drive with an optional integrated load switch, which further simplifies handling in the field.

#### Mains voltage 380—500 V, 50/60 Hz, 3~

#### HARDWARE CONFIGURATIONS

FUNCTION	AVAILABILITY
IP21	Standard
IP54 (FR10 only)	Optional
Integrated fuses	Standard
Load switch (IEC or UL version)	Optional
EMC filtering L (EN 61800-3, category C3)	Standard
EMC filtering T (for IT-networks)	Optional
Brake chopper (cabling top entry)	Optional (H: +122 mm)

The Vacon NXP high-power IP00 drive modules are designed for installation in a separate enclosure.

**Mains voltage 380—500 V, 50/60 Hz, 3~**

The Vacon NXC cabinet drive is compact and well-tested, fully utilizing the flexibility of the Vacon NXP drive. The Vacon NXC is designed to meet the most demanding requirements for flexibility, robustness, compactness and service-friendliness. It is a safe choice for any application.

## Key features and benefits

### One of the most compact on the market with same footprint in IP21/IP54

Maximum utilization of available space lowers overall investment costs.

### No additional cabinet fans

Less service time and fewer spare parts lower overall maintenance costs.

### Increased flexibility with wide range of standardized options

Reduces the need for additional design saving engineering time and costs.

### Easy accessible control compartment

Makes commissioning easier, saving time and costs.

### Mounting rails and pull-out jig

Reduce service time and lower service costs.

## Easy ordering

The Vacon NXC contains the AC drive itself and optional items such as the main switch, contactor, control options and output filtering in one compact unit that is easy to install and service. Ordering is made easy by integrating the Vacon NXC enclosure options into the typecode, to which they are appended with "+" codes.

## User-friendly

In the Vacon NXC, the control unit is mounted in a separate compartment at an easily accessible height together with all control options. Ample space around the power terminals allows easy installation and the connection of power cables. Bottom plates and earthing clamps for the 360-degree earthing of motor cable shields are provided as standard.

## Well-tested

Vacon NXC drives are the result of more than 20 years of experience in enclosure design, which has created a well-tested and proven solution. The good thermal handling of the enclosure guarantees a long lifetime for the AC drive and trouble-free operation even in the most demanding environments. Approved EMC solutions ensure the reliable operation of the converter without disturbing other electrical equipment.

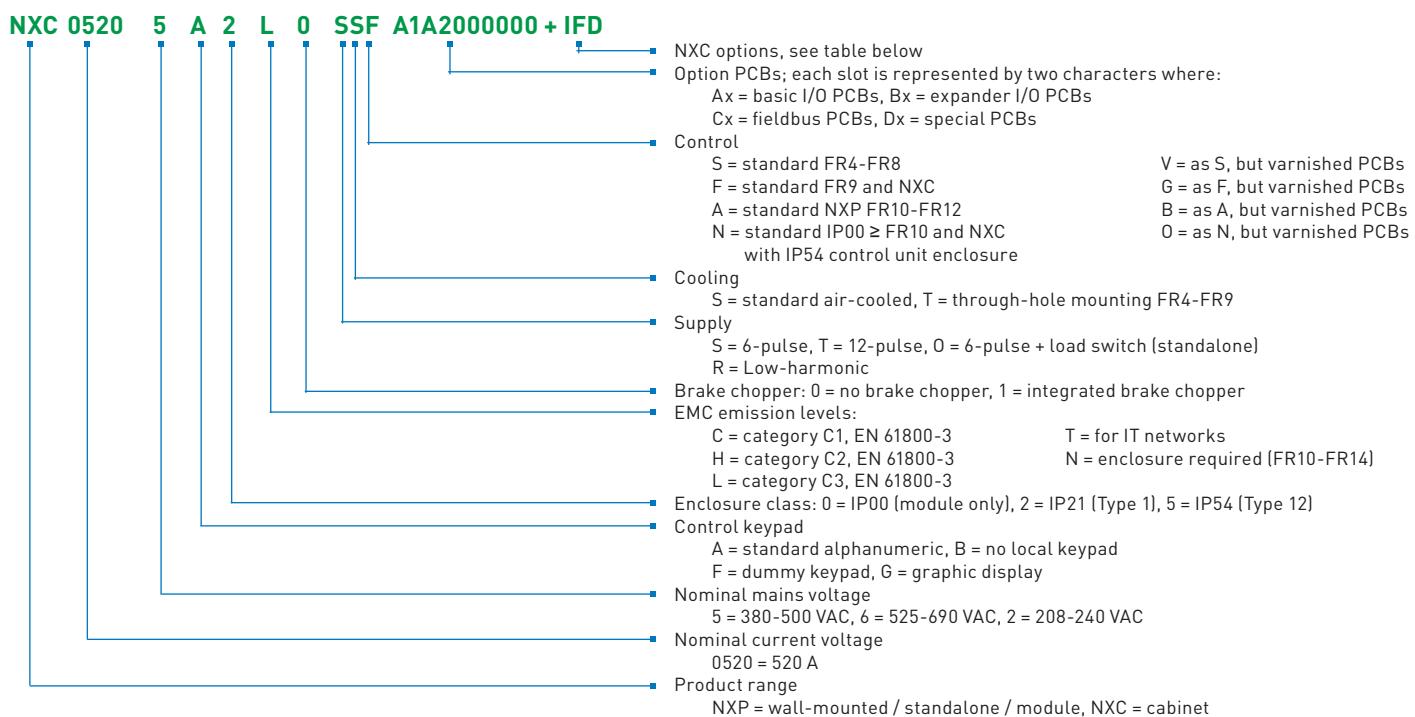

## Service-friendly

The Vacon NXC enclosures are designed to fully utilize the new and innovative installation features of the high-power Vacon NXP. Vacon NXP power units are mounted on rails that are extendable with a pull-out jig. The jig can be used for pulling the power unit out of the enclosure for service.

Vacon NXC, FR11, IP21, with optional fuse switch.

## VACON NXP/NXC TYPE DESIGNATION CODE

## VACON NXC OPTIONS

Vacon NXC options give greater flexibility and make it easy to extend the range of functions. Options are available in different categories and can be combined to meet almost any requirements.

Control terminal options (T group)	
+TIO	Basic I/O wired to external single-tier terminals
+TID	Basic I/O wired to external two-tier terminals + additional terminals
+TUP	Terminals for 230 VAC control voltage
Input device options (I group)	
+ILS	Load switch
+IFD	Switch fuse and fuses
+ICB	Circuit breaker
+ICO	Input contactor
+IFU	Input fuses
Main circuit options (M group)	
+MDC	Terminals in cabinet for DC / brake chopper
Output filter options (O group)	
+OCM	Common mode filters
+ODU	du/dt filter
+OSI	Sine wave filter
Protection devices (P group)	
+PTR	External thermistor relay
+PES	Emergency stop (cat 0)
+PED	Emergency stop (cat 1)
+PAP	Arc protection
+PIF	Insulation fault sensor
General options	
+G40	400 mm empty cabinet
+G60	600 mm empty cabinet
+G80	800 mm empty cabinet
+GPL	100 mm base
+GPH	200 mm base
+FAT	Factory acceptance tests
+SWP	Seaworthy packing

Cabling options (C group)	
+CIT	Input (mains) cabling from top
+COT	Output (motor) cabling from top
Auxiliary equipment (A group)	
+AMF	Motor fan control
+AMH	Motor heater feeder
+AMB	Mechanical brake control
+AMO	Motor operator for +ICB
+ACH	Cabinet heater
+ACL	Cabinet light
+ACR	Control relay
+AAI	Analogue signal isolator
+AAA	Auxiliary contact (control voltage devices)
+AAC	Auxiliary contact (input device)
+AT1	Auxiliary voltage transformer 200 VA
+AT2	Auxiliary voltage transformer 750 VA
+AT3	Auxiliary voltage transformer 2500 VA
+AT4	Auxiliary voltage transformer 4000 VA
+ADC	Power supply 24 VDC 2.5 A
+ACS	230 VAC customer socket
Door-mounted options (D group)	
+DLV	Pilot light (Control voltage on)
+DLD	Pilot light (D01)
+DLF	Pilot light (FLT)
+DLR	Pilot light (RUN)
+DCO	Main contactor operation switch
+DRO	Local / Remote operation switch
+DEP	Emergency stop push-button
+DRP	Reset push-button
+DAM	Analogue meter (A01)
+DAR	Datalogger for reference

The Vacon NXC low-harmonic drive creates savings in applications where low-harmonics are required.

## Key features and benefits

### Clean power with total current harmonics THDi < 5 %

Over-dimensioning of power transformer or input cables is not required. Reduces overall investment costs and optimizes the use of available space.

### No external active or passive filters are needed

Reduces system complexity and overall investment costs.

### No need for special 12-pulse transformers

Well suited for retrofit projects.

### No additional cabinet fans

Less service time and fewer spare parts lower overall maintenance costs.

### Increased flexibility with wide range of standardized options

Reduces the need for additional design saving engineering time and costs.

Vacon NXC low-harmonic cabinet drives are the perfect choice for applications where low harmonics are required.

### Clean power saves on costs

The low-harmonic cabinet drive offers an excellent total solution to meet even the most demanding power quality requirements. The drive complies with the IEEE-519, G5/4 harmonic standards, when correctly installed.

The low current THDi reduces supply currents and allows supply transformers, protection devices and power cables to be smaller. It creates savings for new and retrofit projects because there is no need to invest in expensive 12- or 18-pulse transformers when new or old existing 6-pulse transformers can be used.

Vacon NXC low-harmonic drive, FI10+FI10, IP21.

**Auxiliary equipment (A group)**

- +AMF Motor fan control
- +AMH Motor heater feeder
- +AMB Mechanical brake control
- +ACH Cabinet heater
- +ACL Cabinet light
- +ACR Control relay
- +AAI Analogue signal isolator
- +AAA Aux. contact (ctrl voltage)
- +AAC Aux. contact (input device)
- +AT3 Aux. voltage transformer 2500 VA
- +AT4 Aux. voltage transformer 4000 VA
- +ADS 230 VAC customer socket

**Door-mounted options (D group)**

- +DLV Pilot light (control voltage on)
- +DLD Pilot light (D01)
- +DLF Pilot light (FLT)
- +DLR Pilot light (RUN)
- +DEP Emergency stop push-button
- +DRP Reset push-button
- +DAM Analogue meter (AO1)
- +DAR Potentiometer for reference
- +DCM Analogue meter current trafo
- +DVM Analogue voltage meter switch

**Output filter options (O group)**

- +OCM Common mode filters
- +ODU du/dt filter
- +OSI Sine wave filter

**Protection devices (P group)**

- +PTR External thermistor relay
- +PES Emergency stop (cat 0)
- +PED Emergency stop (cat 1)
- +PAP Arc protection
- +PIF Insulation fault sensor

**Control terminal options (T group)**

- +TIO Basic I/O wired to external single-tier terminals
- +TID Basic I/O wired to external two-tier terminals + additional terminals

**General options**

- +G40 400 mm empty cabinet
- +G60 600 mm empty cabinet
- +G80 800 mm empty cabinet
- +GPL 100 mm base
- +GPL 200 mm base
- +FAT Factory acceptance tests
- +SWP Seaworthy packing

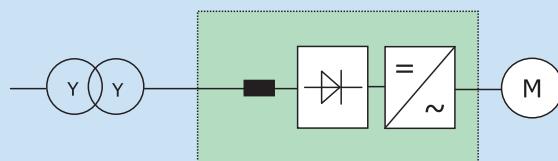

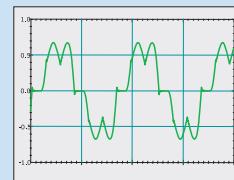

**Cabling options (C group)**

- +CIT Input (mains) cabling from top
- +COT Output (motor) cabling from top

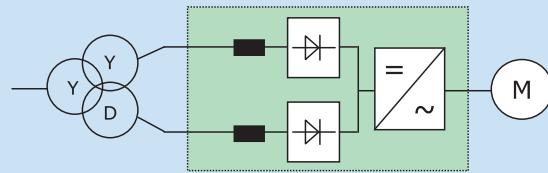

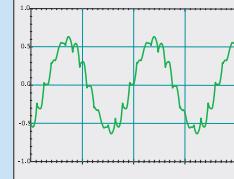

## CURRENT HARMONIC MITIGATION

**6-pulse drive with choke**

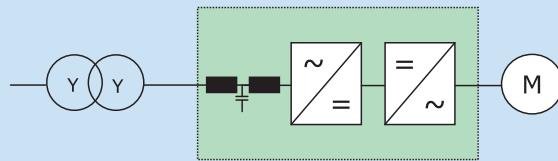

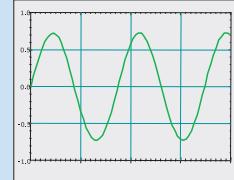

Cost-effective transformer and simple power cabling with high current distortion. Oversizing of transformers needed due to high THDi.

**Current distortion (THDi) > 35 %**

**12-pulse drive with choke**

Higher transformer and power cabling cost. Low current distortion on primary side of transformer.

**Current distortion (THDi) > 12 %**

**Low-harmonic drive**

Cost effective transformer and power cabling with very low current distortion. No oversizing of transformer needed.

**Current distortion (THDi) < 5 %**

## VACON DRIVESYNCH

The Vacon DriveSynch is a new, innovative control concept for running standard drives in parallel in order to control high-power AC motors or increase the redundancy of a system. This concept suits high-power single or multiple winding motors typically above 1 MW.

**High-power AC drives up to 5 MW can be built using standard drive components and have the following benefits:**

- The system is modular and easy to extend.
- High total power can be obtained by combining smaller drives.
- The redundancy of the system is higher than in a conventional drive because each unit can be run independently.
- The small size of the individual drive makes it easy to maintain and service.
- Identical individual units reduce the required amount of spare parts, reducing overall costs.
- No special skills are required for the engineering, installation, commissioning and maintenance of high-power drives as they are made from standard low-power modules.
- The du/dt filter at the output of each individual unit ensures load balancing.
- It is possible to run multiple winding motors with a phase shift between the windings.

Example of the DriveSynch configuration.

### Mains voltage 380—500 V, 50/60 Hz

## VACON NXP CONTROL

The Vacon NXP offers a high-performance control platform for all demanding drive applications. There are five slots (A, B, C, D and E) for I/O boards, and a suitable board can be selected for each slot (see table below).

An external +24 V supply option enables communication with the control unit even if the main supply is switched off (e.g. for fieldbus communication and parameter setting).

The Vacon NXP supports both **induction motors** and **permanent magnet motors** in open and closed loop control modes.

For a closed loop control encoder, feedback from an incremental pulse encoder is normally used. It is also possible to use absolute encoders, since the Vacon NXP is available with EnDat, SSI and resolver interfaces.

Fast drive-to-drive communication is possible using Vacon's fast SystemBus fiber optic communication.

The same control board is used in all NXP-based drives, allowing the maximum utilization of NXP control features over a wide power range.

## OPTION BOARDS

Default settings of OPT-A1, OPT-A2 and OPT-A3 for the Basic and Standard Applications.

**OPT-A4 (encoder input example)**

Terminal	Technical information
1 DIC1A+	Pulse input A
2 DIC1A-	
3 DIC2B+	Pulse input B; Phase shift of 90 degrees compared to pulse input A
4 DIC2B-	
5 DIC3Z+	Pulse input Z; one pulse per revolution
6 DIC3Z-	
7 ENC1Q	Qualifier input
8 DIC4	Fast DI
9 GND	Ground for control and inputs ENC1Q and DIC4
10 +5V/+15V/+24V	Control voltage (auxiliary voltage) output to encoder: Output voltage selectable with jumper X4.

Option board OPT-A1.

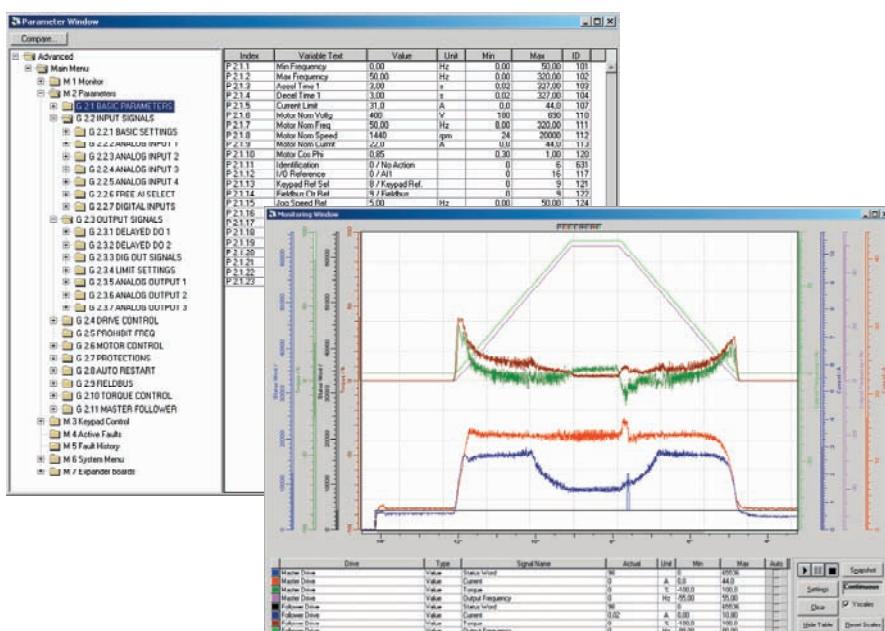

## FIRST-CLASS USABILITY

The text display with functions such as multi-monitoring, parameter copy, parameter backup and start-up wizard makes commissioning easy.

Vacon PC tools can be downloaded from the Vacon website at <http://www.vacon.com>. They include:

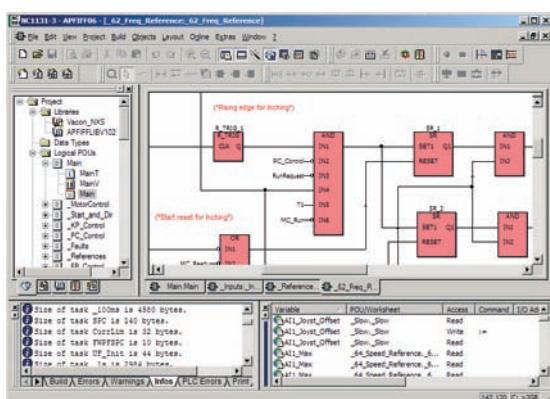

- **Vacon NCDrive** for setting, copying, storing, printing, monitoring and controlling parameters
- **Vacon NCLoad** for updating software and uploading special software to the drive
- **Vacon NC61131-3 Engineering** is available for making tailor-made software. A license key and training are required.

**The Vacon NCDrive** communicates with the drive via the following interfaces:

- RS-232
- Ethernet TCP/IP
- CAN (fast multiple drive monitoring)
- CAN@Net (remote monitoring)

## PLC FUNCTIONALITY BUILT IN

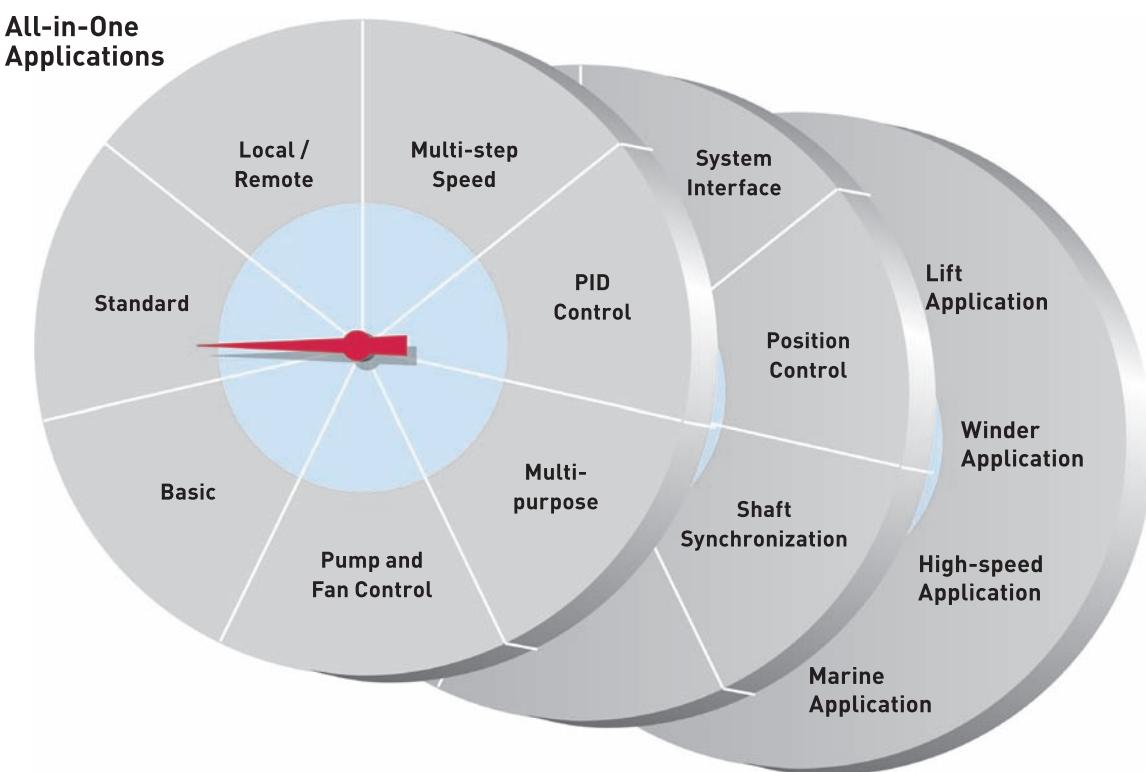

The Vacon NXP features built-in PLC functionality without the need for any additional hardware. Vacon NC61131-3 Engineering can be used to improve performance and create cost savings by integrating customer-specific functionality into the drive.

## SOFTWARE MODULARITY

The All-in-One application package has seven built-in software applications (=default settings and functionality of control inputs and outputs) which can be selected with one parameter.

The Start-up Wizard asks which software application should be used at the first power-up. With this single setting, the drive can be programmed, for example, for two external control places or pressure control with an integrated PID controller.

## VACON NXP APPLICATIONS

Instead of the default All-in-One application package, the Vacon NXP can also be equipped with advanced application software. This is designed to meet the requirements of demanding automation applications.

### System Interface Application

The System Interface Application is designed to provide a logical, flexible interface to machine controllers for use in demanding automation applications.

- Flexible fieldbus process data connections
- Flexible speed and torque reference chains
- Adaptive speed controller
- Inertia compensation and oscillation damping features
- Fast drive-to-drive communication for master-follower applications
- Supports permanent magnet motors
- Integrated mechanical brake and motor fan control
- Emergency stop function

## Position Control Application

The Position Control Application offers an integrated single-axis interpolating positioning controller for the Vacon NXP.

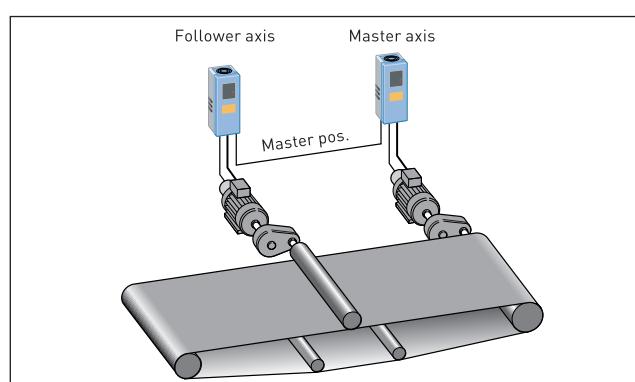

- User-specified units for positions
- Alternative zero calibration cycles
- Home position
- Absolute and relative positioning
- Sequencing
- Hardware- or software-based end limits

## Shaft Synchronization Application

The Shaft Synchronization Application controls the position or the angle of the follower axis directly or in an adjustable ratio to the master axis.

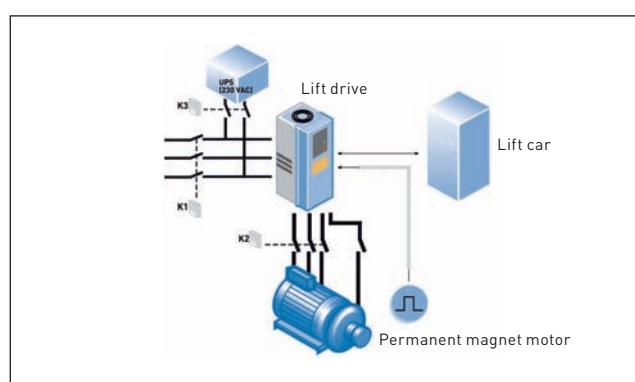

- Master position from secondary encoder input
- Follower position from incremental encoder or resolver
- Adjustable gear ratio
- Trim +/- inputs for ratio change during run

## Lift Application

The Lift Application offers ready-made lift functions for easy commissioning and tuning of a lift.

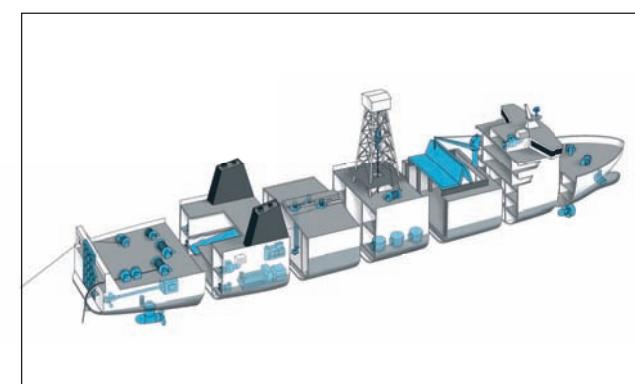

- Induction and permanent magnet motor support
- Lift speed parameters in [Hz] and [m/s]
- Integrated lift brake control logic
- Lift evacuation feature (in case of power failure, the lift can be run to the next floor)
- Built-in motor contactor control logic

## Marine Application

The Marine Application adds support for marine-specific functionality that simplifies the use of the drive in marine systems.

- Fast drive-to-drive communication for speed / load share
- Black-out prevention using fast power limit control
- Full speed and constant power mode control
- Temperature measurement using PT100 sensors
- Built-in brake control logic for winches
- Load drooping

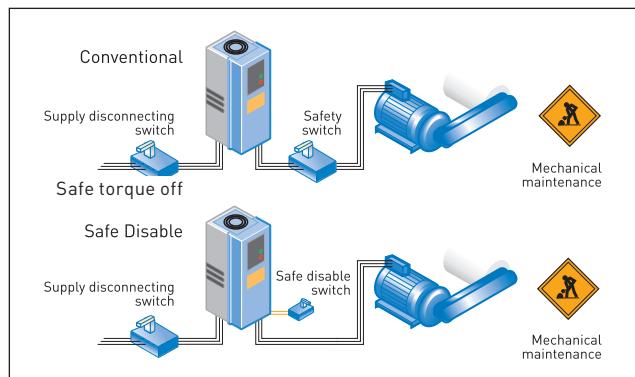

The Vacon NXP can help to increase the safety of a system and reduce complexity by offering integrated safety-related functions in the drive. The need for external components and additional wiring is greatly reduced.

### Safe torque off (STO)

The safety function ensures that the motor will not be driven by the drive, i.e. for safe standstill; for example, when there is a need to perform mechanical maintenance on a machine. In such installations the function may be used to replace mechanical power switches.

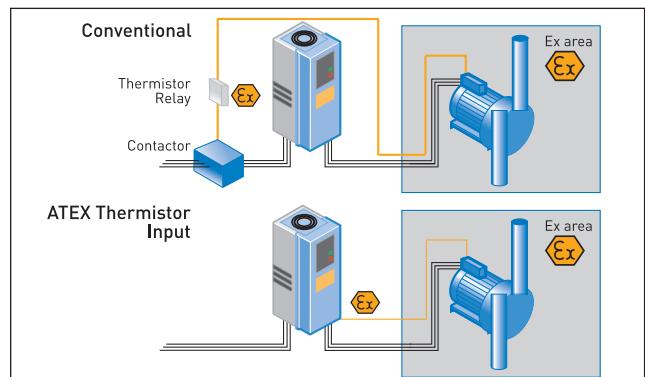

The safety function is certified in accordance with EN 61800-5-2 Safe torque off (SIL2) and EN ISO 13849-1: 2006 (PL.d).

### ATEX-certified motor thermal supervision

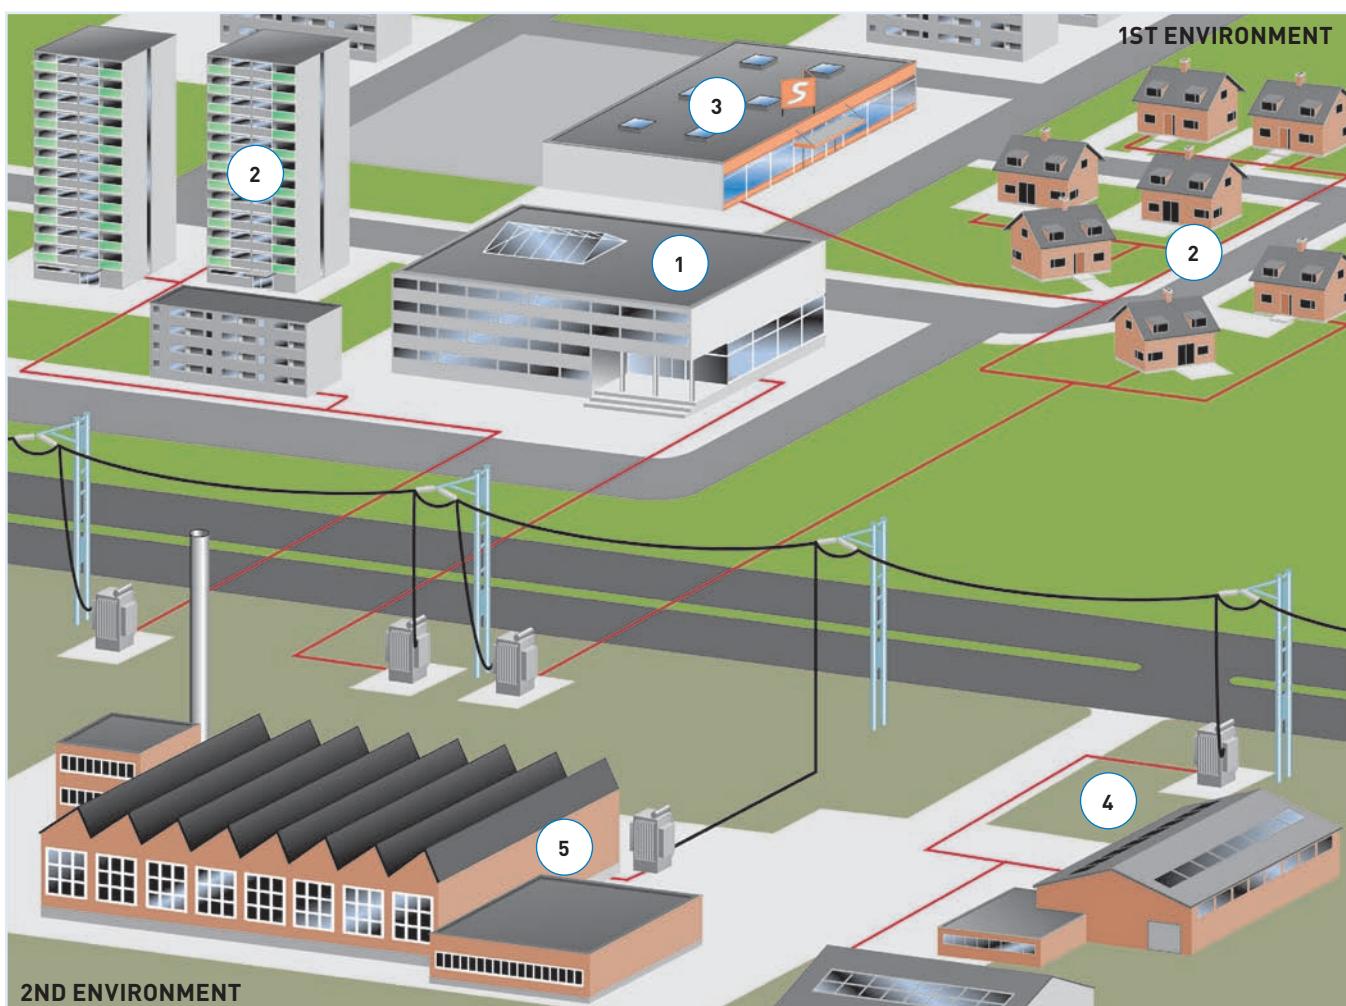

The ATEX-certified thermistor input of the Vacon NXP is certified for use in supervising the temperature of Ex motors located in potentially explosive areas. The integrated safety function offers cost savings compared to conventional solutions with external thermistor relays and contactors.

The thermal supervision input is certified to be compliant with the ATEX 94/9/EC directive.

### Safe stop 1 (SS1)

The safety function decelerates the motor and initiates the Safe torque off safety function after a time delay set by the user. The function is certified in accordance with EN 61800-5-2 Safe stop 1 (SIL2) and EN ISO 13849-1: 2006 (PL.d).

The product family standard EN 61800-3 sets limits for both emissions and immunity to radio frequency disturbances. The environment has been divided into the first and second environments; in practice, public and industrial networks, respectively.

Radio Frequency Interference (RFI) filters are typically required to meet the EN 61800-3 standard. These filters are integrated in the Vacon NXP as standard.

The 208–240 V and 380–500 V ranges of the Vacon NXP (FR4–FR9) meet the requirements of the first and second environments (H level: EN 61800-3(2004), category C2). No additional RFI filters or cabinets are required. The FR10–FR14 and the 500–690 V ranges of the Vacon NXP meet the requirements of the second environment (L-level: EN 61800-3(2004), category C3).

The units in the frame sizes FR4, FR5 and FR6 (with a voltage range from 380 to 500 V) are also available with extremely low-emission integrated EMC filters (C level: EN 61800-3 (2004), category C1). This is sometimes required in very sensitive locations, such as hospitals.

#### EMC Selection Table, restricted distribution

	1	2	3	4	5	
Vacon NXP EMC	Hospital	Residential Area	Commercial	Light Industry Area	Heavy Industry	Marine
C (Category C1)	O					
H (Category C2)	R	R	R	O	O	
L (Category C3)				R	R	
T (Category C4)					R (IT)	R (IT)

R = Required ; O = Optional

	Immunity	Fulfils all EMC immunity requirements
	Emissions	<b>EMC level C:</b> EN 61800-3, category C1 <b>EMC level H:</b> EN 61800-3, category C2 <b>EMC level L:</b> EN 61800-3, category C3 <b>EMC level T:</b> Low earth-current solution is suitable for IT networks, (can be modified from L/H-level units)
<b>Safety</b>		EN 50178, EN 60204-1, IEC 61800-5-1, CE, UL, CUL; (see unit nameplate for more details)
<b>Control connections (OPT-A1, -A2 or OPT-A1, -A3)</b>	Analogue input voltage	0...+10 V [-10 V...+10 V joystick control], $R_i = 200 \text{ k}\Omega$ , resolution 0.1%, accuracy $\pm 1\%$
	Analogue input current	0(4)...20 mA, $R_i = 250 \Omega$ differential, resolution 0.1%, accuracy $\pm 1\%$
	Digital inputs	6, positive or negative logic; 18...30 VDC
	Auxiliary voltage	+24 V, $\pm 15\%$ , max. 250 mA
	Output reference voltage	+10 V, $\pm 3\%$ , max. load 10 mA
	Analogue output	0(4)...20 mA; $R_L$ max. 500 $\Omega$ , resolution 10 bit, accuracy $\pm 2\%$
	Digital output	Open collector output, 50 mA/48 V
	Relay outputs	2 programmable change-over (NO/NC) relay outputs (OPT-A3: NO/NC+NO) Switching capacity: 24 VDC/8 A, 250 VAC/8 A, 125 VDC/0.4 A. Min. switching load: 5 V/10 mA
	Thermistor input (OPT-A3)	Galvanically isolated, $R_{trip} = 4.7 \text{ k}\Omega$
<b>Protections</b>		Overvoltage, undervoltage, earth fault, mains supervision, motor phase supervision, overcurrent, unit overtemperature, motor overload, motor stall, motor underload, short-circuit of +24 V and +10 V

**VACON**  
DRIVEN BY DRIVES
