1. Product description

Applications

The Grundfos Series 100 circulator pumps are specifically designed for heating systems. The pumps are also suitable for circulation of domestic hot water and for circulation of liquid in cooling and air-conditioning systems.

Heating systems

For central and district heating systems, use pump type UPS.

The UPS can be operated at three different speeds.

The pumps are used primarily for one- and two-pipe heating systems, but are, for example, also suitable for mixing loops in large systems.

For underfloor heating systems, we recommend using pump type UP(S) N, as the pumped liquid may often become aerated, causing an ordinary cast-iron pump housing to corrode.

Domestic hot-water systems

For circulation in domestic hot-water systems, use pump type GRUNDFOS UP N with stainless-steel pump housing.

The UP N can be connected to an on/off time switch to save energy. The on/off time switch can switch the pump on/off to limit pump operation to periods when hot water is usually required.

Cooling and air-conditioning systems

For cooling and air-conditioning systems, use standard UPS pumps or the special versions, types UPS K and UP KU, depending on type and size. See also [Product range](#) on page 7.

Temperature ranges: -25 to +95 °C
-25 to +110 °C.

These pumps are suitable for circulation of both cold and hot water.

Type key

Example	UP	S	D	40	-50	F
Type range						
S = electric speed control						
Twin-head pump						
Nominal diameter (DN) of suction and discharge ports [mm]						
Maximum head [dm]						
Pipe connection:						
= pipe thread (no letter)						
F = flange						
Pump housing:						
= cast iron (no letter)						
N = stainless steel						
A = pump housing with air separator, upward water flow						
K = cold-water version						
KU = cold-water version (foam-filled terminal box and stator)

3. Operating conditions

Pumped liquids

Depending on type, Grundfos circulator pumps are suitable for the following liquids:

- clean, thin, non-aggressive and non-explosive liquids without solid particles or fibres
- cooling liquids, not containing mineral oil
- domestic hot water, max. 14 °dH, max. 65 °C, peak max. 70 °C
- softened water.

The kinematic viscosity of water is $\nu = 1 \text{ mm}^2/\text{s}$ (1 cSt) at 20 °C. If the pump is used for a liquid with a higher viscosity, the hydraulic performance of the pump will be reduced.

Example: 50 % glycol at 20 °C means a viscosity of approx. 10 mm²/s (10 cSt) and a reduction of pump performance by approx. 15 %.

Do not pump liquids containing additives that in any way can/will disturb the functionality of the pump.

When selecting a pump, the viscosity of the pumped liquid must be taken into consideration.

Temperatures

Liquid temperature

For liquid temperatures, please see the tables in [2. Product range](#) on page 7 and the following.

Ambient temperature

The ambient temperature for standard pumps with a permissible minimum liquid temperature of +2 °C should always be lower than the liquid temperature, as condensation may otherwise form in the stator housing.

Maximum system pressure

Pump with unions (PN 10): 1.0 MPa (10 bar).

Flanged pump (PN 6/10): 0.6/1.0 MPa (6/10 bar).

Pump with Grundfos flanges: 1.0 MPa (10 bar).

Inlet pressure

To avoid cavitation noise and damage to the pump bearings, the following minimum pressures are required at the pump suction port.

Liquid temperature	85 °C	90 °C	110 °C
Inlet pressure	0.5 m head 0.049 bar	2.8 m head 0.27 bar	11.0 m head 1.08 bar

4. Construction

The UP and UPS(D) pumps are of the canned-rotor type, i.e. pump and motor form an integral unit without shaft seal and with only two gaskets for sealing. The bearings are lubricated by the pumped liquid.

The pumps are characterised by the following:

- ceramic shaft and radial bearing
- carbon thrust bearing
- stainless-steel rotor can and bearing plate
- impeller of corrosion-resistant material
- pump housing of cast iron or stainless steel.

Motor

The motor is a 2- or 4-pole, asynchronous, squirrel-cage motor in conformity with the EMC directive.

Standards used: EN 61000-6-2 and EN 61000-6-3.

The terminal box is easily accessible and has functional cable connecting terminals. The cable entry is tight and incorporates cable relief.

The terminal box and the motor-pump unit have been wet-tested according to the Low Voltage Directive.

Standards used: EN 60335-1 and EN 60335-2-51.

The cable entry of single-phase motors can be pushed out of its guide to facilitate correct fitting of the cable.

Insulation class: F/H.

Cable connection: Pg 11 for 5.6 to 10 mm cable.

The motor incorporates thermal overload or impedance protection. Therefore, no external motor protection is required.

5. Installation

The pump must always be installed with horizontal motor shaft. At start-up, the rotor can must be vented by removing the plug in the top of the motor.

Within a short time, the rotor forces the remaining air out into the system via the shaft.

TM05 5204 3412

Fig. 9 Pumps with horizontal motor shaft

Air separator pump

The pump housing with air separator is installed in systems where the liquid contains so much air that a circulator pump without air separator would be damaged or stop to circulate.

The air-containing liquid is guided from the suction port to the nozzle of the air-separating chamber. In the nozzle, the liquid is caused to circulate considerably in the relatively large chamber, thus creating a low pressure in the top of the chamber. This low pressure combined with the now reduced low velocity of the liquid will cause a separation of air from the liquid. Due to its lower density, the air will escape through an automatic air vent fitted to the air-separating chamber.

The air separator pump is only available for upward water flow.

The pump housing has an Rp 3/8 thread for the air vent. The air vent is not supplied with the pump.

TM00 8966 4296

Fig. 10 Air separator pump

6. Performance curves and technical data

Curve conditions

The guidelines below apply to the performance curves on the following pages:

- Test liquid: airless water.
- The measurements for UP and UPS have been made at a water temperature of 20 °C.
- All curves show average values and should not be used as guarantee curves. If a specific minimum performance is required, individual measurements must be made.
- The UP and UPS curves apply to a kinematic viscosity of $\nu = 1 \text{ mm}^2/\text{s}$ (1 cSt).
- The conversion between head H [m] and pressure p [kPa] has been made for water with a density of $\rho = 1000 \text{ kg/m}^3$. For liquids with other densities, for example hot water, the discharge pressure is proportional to the density.

Energy labelling

TM05 3936 1712

From 1 January 2013, the old A to G energy label will no longer be effective.

The new energy efficiency index (EEI) must be stated on circulator pumps in order to sell them in the EU.

UPS circulator pumps with pump housing in stainless steel are not covered by the EuP requirements from 2013 as these are drinking water circulators specifically designed to be used in the recirculation of water intended for human consumption¹.

Circulator pumps for domestic hot-water systems are not covered by the EuP requirements from 2013 as the pumps are suitable for drinking water only and must therefore be used for purposes as such².

1: Commission Regulation (EU) No 622/2012, definitions (6).

2: Commission Regulation (EU) No 622/2012, subject matter and scope 2. (a).

²⁾ Brass/bronze.

Blank = not available.

Alarm module

The alarm module offers the possibility of monitoring the pump for failures via external equipment. The module comes with both an NC (normally closed) and an NO (normally open) galvanically separated output. The alarm output is activated either when the power supply fails or when the thermistor has cut out the motor.

Insulation kits

UPS circulator pumps can be fitted with two insulating shells. The thickness of the insulating shells corresponds to the nominal diameter of the pump. The insulation kit, which is tailored to the individual pump type, encloses the entire pump housing. The two shells are easily fitted around the pump.

Grundfos controllers

TS 3: On/off time switch

The on/off time switch is designed for wall mounting. The time switch automatically switches the pump on/off at preset intervals. It is available with 24-hour or week dial.

Type	Time switch	Product number 1 x 220 V
TS 3/T	24-hour dial	96406992
TS 3/W	Week dial	96406993

TM01 0205 2602

Fig. 14 TS 3

ET 2: Temperature switch

The ET 2 temperature switch can be used in conjunction with the SAT 200 and GES 200. The ET 2 switch performs control according to the outdoor, room, flow-pipe or return-pipe temperature.

Control signal	Type	Temperature switch	Product number
Temperature (outdoor, room, flow pipe, return pipe)	ET 2	With housing and outdoor sensor	ID4383
		With sensor for external pipe mounting	ID4384
		With sensor for internal pipe mounting and bushing	ID4385

Differential-pressure controllers are also available.

Terminal block

The terminal block is fitted to the terminal box and used for the connection of external controllers (for example for external changeover between two speeds).

Type	Product number
Terminal block	605003

TM00 5144 5094

Fig. 15 Terminal block

Plug-in timer

Plug-in timer to fit 50 Hz household power. See table to find the product to fit country-specific power outlets.

The timer only counts time when it is connected to a power source. There is no battery in the timer.

10. Grundfos Product Center

Online search and sizing tool to help you make the right choice.

SIZING enables you to size a pump based on entered data and selection choices.

REPLACEMENT enables you to find a replacement product. Search results will include information on

- the lowest purchase price
- the lowest energy consumption
- the lowest total life cycle cost.

The screenshot shows the Grundfos Product Center website. At the top, there's a navigation bar with 'HOME', 'FIND PRODUCT', 'COMPARE', 'YOUR PROJECTS', 'SAVED ITEMS', and 'HELP'. Below this is a search bar with a 'SEARCH' button. The main content area has four large buttons: 'SIZING' (with a subtext 'Enter pump sizing'), 'CATALOGUE' (with a subtext 'Products and services'), 'REPLACEMENT' (with a subtext 'Replace an old pump with a new'), and 'LIQUIDS' (with a subtext 'Find pump by liquid'). Below these is a 'QUICK SIZING' section with input fields for 'Flow (Q)*' and 'Head (H)*', and a 'Select what to size by' section with radio buttons for 'Size by application', 'Size by pump design', and 'Size by pump family'. A 'START SIZING' button is also present. At the bottom, there's an 'ADVANCED SIZING' section with checkboxes for 'Advanced sizing by application' and 'Guided selection'.

CATALOGUE gives you access to the Grundfos product catalogue.

LIQUIDS enables you to find pumps designed for aggressive, flammable or other special liquids.

All the information you need in one place

Performance curves, technical specifications, pictures, dimensional drawings, motor curves, wiring diagrams, spare parts, service kits, 3D drawings, documents, system parts. The Product Center displays any recent and saved items - including complete projects - right on the main page.

Downloads

On the product pages, you can download installation and operating instructions, data booklets, service instructions, etc. in PDF format.

Subject to alterations.
