

# WEDA W50

## WEDA W50

Weda W50 is a compact cleaner with a high cleaning capacity with rotating brushes and a pump that delivers 600 liters per minute. It can be equipped with a discharge hose outlet for removal of all sedimentation independent of size. The W50 comes in three versions:

**W50 Standard** - for rectangular pools

**W50 Super Auto** - which allows for programming of the cleaning pattern

**W50 R** - a completely automatic cleaner which calculates its turns during operation.

All three versions can also be controlled with the radio remote for access to hard-to reach areas. The new laser sensor design allows for fully automatic cleaning with no moving parts for the control functions. As with all Weda cleaners the W50 is based on an electrical submersible pump with a high resistant steel impeller to safeguard reliable cleaning that does not get interrupted by the larger particles frequently found in public pools.

### Standard equipment

The W50 cleaning unit  
Control box  
Filter bag 120 micron  
Power supply cable, 2 meters  
Radio remote control  
Umbilical (floating cable), 40 meters

### Optional equipment

Trolley  
Beach control – makes the cleaner turn back if it travels out of water  
Discharge hose connection 2”  
Filter bag 50 micron

### Technical data

Weight in air:	approx. 28 kg
Weight in water:	approx. 12 kg
Dimensions (LxWxH):	65 x 50 x 30 cm
Suction capacity:	600 l/minute
Speed in automatic mode:	0,2 m/second
Mains voltage 1-phase	
50/60Hz:	110/230 V
Max. power output:	1.1 kW
