

Submersible abrasion resistant drainage pumps type po-Söffel

The drainage pump po-Söffel is a submersible centrifugal pump for delivering clean or dirty water with solid admixtures up to a particle size of 10 mm, a pH-value from 4 up to 8 and a medium temperature during continuous operation of up to 40 °C, for a short time up to 60 °C.

Fields of application

- water supply at civil works sites and in mining
- watering and draining in communities, gardens and domestic sectors
- used in disaster areas and by fire brigades
- water supply at industries and agriculture
- fountains

Design

Single stage centrifugal pump with open impeller. For vertical, horizontal or inclined installation. The double casing made from aluminum alloy or stainless steel guarantees the best cooling of the motor by circulation of pumped fluid. The pump can be used for continuous working-, sipping suction and emerging operation. The dual mechanical seal made of silicon carbide guarantees a safety seal of the motor.

The impeller is made of stainless steel (1.4027) or polyurethane. The diffuser is wear resistant and guarantees a long life cycle. The anti-friction bearing are life time grease lubricated. They assure a vibration-free operation.

The motor is designed as three phase AC or mono-phase AC.

Accessories (on request)

- integrated or external level control
- coupling fitting for two or more pumps to increase the head
- flat water suction fittings
- non-return valves
- flexible tubes
- connection parts:
 - Storz couplings
 - flange couplings
 - double and reducing nipples
 - pipes, blends and fittings

Material of construction**Drainage pumps po-Söffel****According to DIN**
